"Bob Elliot" <ne1r@loa.com> wrote:
>Smoke has the capibility of putting 1meg resistence on components. I
>wonder if this would make the gear run hot and therefore shorting the life?

It's not just the issue of resistance, it's that smoke contains a number of corrosive chemicals, and its residue is hygroscopic (attracts water, in other words), and cigarette ash is a highly abrasive, finely powdered compound that gets in everything and ruins almost everything, like Mount St. Helens volcanic ash. Put together, the smoke residue and the cigarette ash collect every speck of dust within 50 miles, keep itsoaking wet, and let it corrode everything it touches.

I've seen so many electronic devices destroyed by cigarette smoke residue that if I even think a previous owner was a smoker, I cut my offering price by half. That's what smokers do to gear. And in some cases, I will refuse free equipment if it has significant smoke exposure -- and around these parts, I used to have a reputation for hauling off stuff that the metal processor refused!

Here's an example of non-smoke exposure. When I married my wife, she brought an old microwave and VCR into our union. She's a dedicated non-smoker, and a reasonably tidy person. When I had to open these devices for some routine maintenance, I was amazed at the cleanliness of the insides of both. I had to check the date codes on the components to verify the age, and made her produce the receipts. BOTH LOOKED BRAND NEW. No dust, no goo.

And both work perfectly after 10 years of no smoke exposure.

You nicotine junkies need to realize that your smoking destroys electronics over time, the same way it destroys your lungs, your heart, and your health. Besides the annual hundreds or thousands of dollars you send up in smoke, you're also causing hundreds or thousands of dollars' damage to your electronics. And think about this -- you now have a lot of electronics in cars, under the dash for systems control. If you smoke in your car, you're destroying those electronics too. But like everything else associated with your addiction, I know you'll find a way to rationalize destroying your car, same as your ham shack, your health, and your financial freedom.

FWIW, I am an ex-smoker and I don't have to rationalize my holier-than-thou attitude. There is no rationalization for a clear understanding that tobacco use is wasteful, unhealthy, and offensive. And any excuse you can make that you "can't quit"

is a rationalization -- you CAN quit, and it WILL be very
difficult. Nicotine is more addictive than heroin, perhaps more
addictive than any other commonly available drug on Earth.
And yes, it took me several tries before my will power overcame
my nicotine addiction just before midnight on Dec. 31, 1977.

Jim N6OTQ
And it just now occurred to me that the phonetics I've used
since I got the call -- "Ought To Quit" -- serve as a suggestion
to smokin' hams. Don't you want to live long enough to join QCWA?

10. FS CW STATION IDENTIFIER

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-01 00:00:00 UTC
From: ka2qep@webspan.net
Message-ID: <5hrcq1$jcu@news.webspan.net>
Source record: 178820

** FoxGap CW Station Identifier **

This unit is great for repeater identification, when your machine is up and running, or when you are down for repair and want to maintain a presence on your frequency. Also it is perfect for beacon use, just add a transmitter. For beacon use it will control your PTT on your FM rig, or key your output in sideband mode.

Features:
* Adjustable CW speed, 5 to 60 words per minute.
* Adjustable code tone, 200 to 1200 Hz.
* 55 character message buffer, plus.
* 55 character alternate message buffer.
* Repeat message time, 1 minute to 24 hours.
* Programmable from your IBM computer.
* Windows 3.1 or Win 95 compatible.
* Adjustable audio output.
* PTT output and Key (or beacon) output.
* Programming cable supplied.
* Small size, 3"L x 1.25"W x .75"H
* Standard 12 volt operation.
* Under 50ma. current consumption.

Programming requirements: IBM or compatible computer with a mouse and one 3.5" HD floppy drive, running Windows 3.1, Win 95, or higher. And a second COMM. port (2,3, or 4).

The FoxGap CW Station Identifier lists for $69.95 For a limited time the intro offer is $50.00 Shipping extra. We can ship UPS COD cash only, MO, or certified check. For further information contact Jim at 610-588-0282
Fax 610-588-0253 Or email n2gkw@epix.net

So does smelling your fart that you let slide out so nonchalantly with a big smile on your face after eating your dinner. I've seen guys like that sitting next to me when I am out at a nice place and I am trying to finish my meal and I just want to puke all over the damn place. Just because you cup your hand and fart in it just to smell your own farts doesn't mean others like them.

God please help us...give us a break!!

For Sale:

Optoelectronics DC-440 Tone Decoder.

-Decodes and displays DTMF, DCS, and CTCSS tones
on it's EL Backlit LCD Screen

-CI-V computer interface port for downloading of data.

-Does not require a computer to operate.

-Includes Internal NiCAD Battery pack for portable operation.

I'm selling it because I purchased an OS535 and don't need
it anymore.

I'm asking $200 shipped COD inside the US, Please e-mail
me at mwaldron@ohio.net or call me at (216) 322-6279.

>I thought the P3D antenna gain and power output was high enough to
>allow the use of omni antennas on the ground. Is this not true?

Wow, been digging in the archives. eh? P3D has a 10x larger power
budget than AO10 or AO13, but I think you'd be hard pressed to work
it using omni antennas when it is at apogee. I understand that it
is planned to be active on more than one mode at once, so the larger
power budget will be shared across more than one transponder at a
time. And while greater output power will make it somewhat easier
to hear, extra power supply at the satellite doesn't make it hear
you any better.

It is supposed to be 3-axis stablized, so squint angles shouldn't
be as much of a problem as they are for AO10, and were for AO13,
but I don't think that will be sufficient to allow you to work
it without a steerable gain antenna at your station. (At perigee,
of course, it should be possible to work it with an omni, but it
won't dwell at perigee long, and coverage will be much less than
when it is at apogee and a whole hemisphere will be in its footprint.)

It shouldn't take quite as elaborate an antenna system to work
P3D as it does to work AO10 (or did to work AO13). Fairly compact
beams should suffice. You shouldn't need anything like the 22 el
2m and 40 el 70cm long boom antennas I'm using for AO10. An 8 el 2m
and a 16 el 70cm antenna should do nicely (that's for CP, halve the
number of elements for linear polarization). That's a boom length
on the order of 6 feet. If you're running a good amp and have a
good mast mounted preamp, you might get away with even smaller
antennas, say a nested quad backed by a reflector screen (but
with decent antennas you shouldn't need to run an amp at all).

You shouldn't have any trouble setting up a workable antenna system
on a patio or balcony. You can cheaply build the antennas needed.
And as I noted in my original post, you can hand steer the antennas
as long as you aren't trying to work perigee passes. The molynia orbit
has a very long dwell at apogee so you don't have to reposition very
often.

The real digital action may be up at S band, and the needed antenna
for that can be quite small. A 1 to 1.5 meter dish should be plenty,
and that's easily handled on a tripod. You might even be able to
dual feed it and use it at L band as well. If not, a modest loop
yagi will do for L band. (I'll be using my 12 foot dish, because
I already have it, but I'm going to have to throttle power *way*
back to avoid being too strong at the satellite.)

P3D is going to be much easier to work than our previous molynia
orbit birds, but don't expect to work it at apogee with a microsat
class station. You'll want a receive antenna with a narrow enough
beamwidth to keep the warm Earth from affecting system noise
temperature (otherwise a low noise preamp will do you no good),
and you'll want a transmit antenna with enough gain to avoid having
to run an external amp. With my current setup, I expect to be using
less than 2-10 watts uplink power for mode U/V (the higher power may
be needed to burn through the treeline for near horizon passes). With
lesser antennas, you may need 25-45 watts uplink power.

The receive setup is really the key, however, as it always is with
satellites. You simply *must* have enough directivity to let the
antenna look at the cold sky. Otherwise system noise temperature
will be limited by the warm Earth, and you won't be able to compensate
by adding more preamplification. An antenna with a 3 db beamwidth of
22 degrees, and a good F/B ratio, should suffice for high passes.
A narrower beam will be needed for near horizon passes.

19. dual band 2mtr/440 opinions needed

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-01 00:00:00 UTC
From: n4hwlken@worldnet.att.net
Message-ID: <3340F593.1BDC@worldnet.att.net>
Source record: 178829

I am looking for a 2 meter/440 mobile rig. I am planning on using it to crossband from a 440 ht to 2 meters. The dual band rig will be in the car while I am out hiking or fishing and I will use it to get a better signal back into local repeters than I could from a 2 meter ht. I considering and Alinco al-610,a kenwood tmv7a, or an Icom 2710. The dual band needs to be able to be remotely controlled (change freq. ect) from the 440 ht keypad. Any suggestions ,opinions,or experience whit this would be appreciated.

Thanks
Ken Tenpenny

I found them very inefficient. I tried them with both a tripod
mag-mount and a trailer tongue and it was about the same. 100 watts
in; maybe 35 watts out. For 10-15-20, they're not bad, but 40-160 is
a waste of money. I always thought HF mobile was like trying to put
a square peg in a round hole, anyway. No whip will give you much in
terms of bandwidth, and efficiency seems to relate to frequency with
hamstick-type antennas. Though the big screwdrivers are ominous
looking, they DO seem to work well, and actually get out on 40-75-80.

I've heard mixed reviews about the Outbacker line. Again; if you're
working high bands, no problem. But below 40 is like trying to
squeeze marzipan through cheesecloth.

Ironically, the Hustler wide-band resonators seem to work fairly well.
Maybe it's the center loading. QST did a mobile antenna test about a
year ago. The tunable screwdrivers won, hands down, but the Hustler
was next in efficiency, with the hamsticks at the bottom of the list.
I guess nothing beats a full-wave dipole. After my experiments with
HF mobile, I keep my rig at home.

Personally, I can't financially support ANY organization that insists
on using inferior product. I am speaking about the Ariane 5 launch
vehicle. The first one blew up, and the others that had space on
the second launch pulled-out. One would think that Amsat would have
learned over the years that the ESA does not have the world's best
reliability for launch vehicles (anybody remember the early Oscars?
The ones that were lost because the launch vehicle - Ariane - went
into submarine mode?). I know where of I speak, having worked in
the satellite business (RCA and it's successors) for the last 13+
years. When they see the light and use another launch vehicle, THEN
I'll support them (Amsat).

>I thought the P3D antenna gain and power output was high enough to
>allow the use of omni antennas on the ground. Is this not true?

Traditionally, there has always been a 10dB discrepancy between
"AMSAT-promised minimum ERP" and realistic minimum ERP. This, of course,
mostly was because of the AGC action caused by alligator stations,
and on P3D the situation might be better because of the countermeasures.

Of course, directional antennas are always better because they help to
reduce noise as well. You can compensate the gain you get from the
antennas by using less output power.

I've heard that NiMH cells have a life of about 100 charge/discharge
cycles vs. 300 cycles for NiCd cells.

Had lots of nibbles and a few offers that didn't pan out so I'm going to drop the price for a quick sale. New price is $850obo or trade for equivalent in new toys.

-Josh

Hi,

I have a pair of long range wireless radio modems that I'd like to trade (or sell) for either Ham or shortwave equipment. They were partial payment for a contracting job I had and I don't have much use for them. Though, it was fun to play on the net from the beach 1.5 miles away (connected through a unix server).

They are the GRE Gina 6000N spread-spectrum radio's and full specs for them can be found at "http://www.greamerica.com/6000n.html". I also have 50' of low loss cable (can't remember the designation) and a yagi antenna with 6db of gain.

The radio modems have a communications speed of 38.4Kbps full duplex with an airspeed of 128kbps. They are spread-spectrum in the 900mhz band so no license is required.

I'd like $1000 cash or equivalent in trade. The modems retail for >$700 each according to GRE. I just want to recoup my losses from the failed contract job.

I'm looking for ham radio equipment, scanners, and shortwave radios (AOR8000, Icom 725, and similar). Micro- power FM broadcasting equipment is also entertaining as is any cool electronic stuff... :-)

I am thinking of purchasing an Icom IC706 xcvr to replace the Kenwood TS-50 AND Alinco Dr-130 that was stolen out of my vehicle. I like the fact that the face plate is detachable and thus can be hidden. What are your opinions pros and cons that I can use my insurance money to the best advantage.

I have been told the IC-706 is a "Technician's radio" what do you think.

If possible please e-mail direct

True, but I prefer a place that actually knows about their
equipment, instead of one that always says "Well, I think..." or
"Uhh..I'm sure it does...," etc. when you ask them something. Rat
Shack might not be that way where you live, but it sure is where I
live! That's why I don't waste my time or spend any money with them.
Basically, it all comes down to personal opinions. I prefer a place
that has excellent service and knowledge about their products,
regardless if they have a good 30 day return policy or not. Afterall,
it's my money I'm spending, and my soon-to-be new toy! :)

Gary, there have been many posts over the past few months regarding
fuel pump noise in a number of different vehicles. I had the same
problem with my 93 Dodge Caravan. I was using a glass mount antenna
and the noise from the fuel pump made 2 meter reception marginal at
best. My solution was to install a roof mount antenna. I tried a
mag-mount first which was fine, then I got brave and drilled the
famous hole in the roof. I realize this didn't eliminate the problem
at the source, but the relocation of the antenna gave me the isolation
I needed from the fuel pump.

I have seen posts from others about installing capacitors, etc. I
don't know if this has been a cure for others. You may want to try a
different antenna location (if possible) as a quick alternative.

***** I personally would rather have them say "I don't know....." than
tell me things that are not exactly true.

In the past, I have gone to a large Ham Radio Dealer, and was told that
the Kenwood 2MTR FM radio they were pushing was as good as the the Icom
IC-25A I was interested in. Bullshit! It was nowhere near the IC-25A
in any way. Found this out after "I bought it I was stuck with it".....

Hey! They were not even prepared to put the radios on a power supply or
antenna.

A few years later, I bought a Kenjunk 731-A dual band rig because it was
as good as the IC-2400A by Icom, but a lot less expensive. By the time
the smoke cleared, I spent about $125 more than if I had just insisted
on the IC-2400A. Different dealer, different salesman, same crappy
results. (The IC-2400A still performs well in my shack)

Oh, BTW, neither store was a Radio Shack, but a real genuine ham radio
store run by hams and staffed with hams. So whats your point?

.

Hey, how about if we all storm Icom with email to get these back into a
limited production. Oh, and as far as the Kenwood 7xx series, or for
that matter, any kenwood, they don't have a narrow front end and don't
hold up good in a repeater environment as a remote base (at least not as
good as the Icom band units!)

The little Icom antenna works better on the 440-470 mhz range than the
factory or the Commet SMA. However, that is the only place it works
better. The Commet works better in the 800 band than the factory or the
ICOM. The Commet is the best all around antenna. However, I do use the
little ICOM sometimes when I monitor my UHF channel.

46. 2 Meter Repeater

Newsgroup: rec.radio.amateur.equipment

47. FT-50R Freeband Suggestions

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-01 00:00:00 UTC
From: Mark Grandstaff <mgrand@bmi.net>
Message-ID: <3341E502.13A4@bmi.net>
Source record: 178857

O.K. I read through all the info on mods for the FT-50R and am more confused than ever.

My goal is to get expanded transmit and expanded receive (freeband) operation.

I have a newer model (SN begins 6L12) so I realize that "pulling the plug" won't work to achieve freeband. I assume that the expanded Tx MARS/CAP mod of unsoldering the jumper #1 will work though. In an article submitted by E. Scott Sykes in addition to the jumper modification he suggests unsoldering the resister at location "A" to achieve a freeband state. Is this part of the "pulling the plug method"? What is the purpose of this resister? Is this recommended with the newer radios?

It looks as though my best option to get to the freeband state is to first do the MARS/CAP mod as described by Bill Childers (unsolder jumper #1) then follow the software suggestions outlined by Ingra-Beton (3/26/97). Any comments?

Also about all those antenna suggestions... I'm leaning towards the Standard C508 replacement antenna or the Icom FA-S270 My goal is get an antenna that works on the ham bands and in the MARS/CAP frequencies and is hopefully a little shorter than the stock one .

:find the difference that noticable when holding the radio.
:
:Perry - W6AUN

Sorry, but according to the manual the FNB-40 will only give a max of
2.8 watts on VHF and 2.0 watts on UHF, and it is the smallest battery
you can get for the unit. The FT50-R requires 9.6 volts for 5 watts
and the FNB-40 battery is a 6 volt unit.

I called Kenwood today 310-639-5300 Press 2 then 6 to get a human (unless you care to hear the computer tell you what a fucking vlaued customer you are).

I was told the TMV-7 like the 733 has an "open mike" as far as DTMF goes. It hears and reacts to DTMF (or anything like DTMF like my girlfriends voice).

This is due to some obscure feature that is not even listed in the manual. The feature is used in Japan to hold the mike open like an intercom (what are those Japaneese up to?).

But Kenwood decided to sell the radio as is to the Yanks so any beeping or booping will cause the radio to act like it has Saint Vitus Dance if you have DTMF control activated.

The guy (obviously embarassed by his companys ass backwards thinking) says I can send the mike back and Kenwood will solder on a transistor to end this problem. He promised to return the mike within 5 days of getting it.

He also offered to send me a transistor for my very own to solder on myself.

Why these knuckleheads did not have courtesy to do this when they made the unit is beyond me.

This is a nice radio other than this nusisance.

Plus, even if it WAS a Tek o'scope, the $49 is just the opening bid in
an auction that could easily be open for weeks.

Joseph, if you are going to advertise, fine. Please don't use these
greasy tactics to insinuate that "YOU TOO can get a Tek oscilloscope
for $49", or that it would "be a shame if Joe Blow got it and you
didn't". You are insulting the intelligence of most of us here with
posts like this.

It is an auction, not a sale. The best tactic on the eBay auctions is
to note the closing time and date, and be ON-LINE to duke it out AT
THAT TIME until the bidding is closed. Any bids weeks prior to close
are simply testing the water and no indication of final bid or sales
price.

Hi Everybody.

I guess I dove into the 10m mobile rig market a bit late, passing on these guys several years ago. I found a President (Uniden) HR2600 from a local at a good price. I'd like to do a bit of tweaking, specifically bump up the transmit audio level as it seems to be weak.

First, is there anyone with service information that could tell me what pots adjust which level. I hate to start tweaking without a reference! Second, what are the useful mods for this rig for amateur use (Frequency expansion need not apply here!), I already have the receiver mute mod from the QRZ CD-ROM. I'm sure many mods have been written up, but where did they go? They certainly didn't end up on the various radio mod web pages, sigh...(they never have the info on my model!)

Thanks for readin'

What about this guys.. I bought a hf rig about 2 yrs ago, the guy that I bought it from was NOT a smoker, however the previous owner was, I did clean it up but it hadnt given the previous owner(s) any problems.. I can see both sides I guess if you are that concerned, then you had better ask the buyer beforehand..

Yes I am a smoker, HOWEVER I do NOT smoke around my gear, and I do every 2 weeks, NO MATTER IF IT NEEDS IT OR NOT I clean all of my gear by hand, each and every piece. Yes my shack is open to all Amateur Radio operators to inspect<grin> I take pride in my equiptment, thusly I dont smoke around the goods..

Just my opinion..

With the transceiver switched off, press and hold the MHz button near the
upper left while switching the transceiver on.

Release the MHz button and press the F/W button. Then, within five
seconds, turn the selector knob to set the desired display brightness.

Wait five seconds, or press F/W again, to return the control functions to
normal operation...

>Anyone have experience with the Ham Stick HF antennas from
>Lakeview Co.?

Larry:

The hamsticks work fine. I carry 4 bands plus
6M in my trunk and have the quick disconnect
connector on each one. I change bands when I
stop to fill up with gas. Have a nylon string brace
back to the trunk about 18 inches up from the
mount. No problem at highway speed.

They do seem to be less efficient than the Hustler
antenna, however. I'd recommend going with the
Outbacker. 73, Jim, KB7ET

Wanted to buy:

Single channel Motorola HTs. Battery condition doesn't matter, but
needs to be crystalled or programmed (ready to use) on 151.625,
154.570, or 154.600 MHz. Must include charger and preferably a stubby
antenna.

These aren't for me, but for a friend for whom I will forward all
replies. Please email me at:

s_msadle@mccallie.chattanooga.tn.us

and I will get back with you ASAP. Thanks!

>I'm perfectly capapble of cleaning up a piece of used gear, smoke or not. For
>the right price I'd buy something that had been rescued from a latrine!
>

I had the opportunity to volunteer to fix a piece of gear for a
friend. Complaint was the receiver went deaf. After checking it out,
I found the RF amp in the front end had a corroded lead and another
completely corroded off. There was some dried substance on the PC
board which I managed to clean off. After repairing the radio it took
about 2 weeks to air out the cat smell...yuckkk!

I guess maybe hamfests aren't such a bad place to buy gear, at least
you get a chance to look the gear over and can get a better idea of
what you're purchasing than with a sight-unseen sale. I've seen rigs
at hamfests, though, that make you think the seller and XYL had given
the harmonics hammers and chisels for Christmas...amazing!

Pakratt II works fine on Windows 95. You must have a configuration
problem. In fact, when I got Windows 95, Pakratt 1.0 didn't work and
Pakratt 2.0 is what they sent me. It worked the first time I tried
it.

I have never worked an AMSAT satellite because the gear required costs
too much. I work only RS-10, RS-12, and RS-15. When AMSAT puts up
a bird I can use, I won't be cheap.

Do you have any idea how I can contribute to the Russian Amateur
Satellite Program?

I've tried the hamsticks--and the hamstick copies. Junk for anything
lower than 40 meters. Not bad for 10-15-20, but there's nothing up
there now, anyway. They are not broader-banded. You may be best
with a tunable screwdriver antenna (Broadbander BB3/High
Sierra/Bandhopper,etc.). For HF: Bigger remains better.

Are you interested in a New old stock Eimac 450TL tube. I am told that it is a large transmitter amplifier tube. It is a beautiful tube with a large glass globe in the center. I would be interested in trading it for interesting old (pre 1910)meter, light bulbs, early vacuum tubes or?

92. Hellp with HTX202 + TNC RFI problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-01 00:00:00 UTC
From: Jeff Gregor <hobbes99@ziplink.net>
Message-ID: <3341E3A6.6327@ziplink.net>
Source record: 178913

I just bought my first packet TNC the other day (KPC-3+), but I'm having
a severe problem hooking it up to my htx202 due to RFI. I've noticed
this about the handheld before, that when I bring it into a room with a
computer on it goes beserk (noise all the way up to s-10 on the scale).
It doesn't seem to make a difference which computer, they all do the
same thing, so I'm assuming that the problem is with the radio rather
than just my system.
I see people with htx-202's hooked up to packet all the time (QST
articles and whatnot), so I'm wondering if anyone else has had a similar
problem or if there is something wrong with my individual radio.
Any suggestions/comments/information would be greatly appreciated!

Source record: 178712

Hi, miker. Specifically, I added an opposing-polarity pair of diodes on the output of a simple one transistor fet booster-amp with just a few parts (right out of the Handbook- forget the year). This amp was fly-mounted on a spare xtl filter input terminals. The extra filter was bought from a company that bought out supplies from Atlas after production ended, and piggy-backed on top of the original filter. All that is necessary is a tuned circuit to take out the harmonics, the filter was a bonus in an already outstanding I.F. circuit. Nowadays, I would likely use Mini-circuit-labs monolithic amplifiers for this kind of mod- tiny, plenty of gain and power handling, and no external parts on some models, one resistor on others (D.C./RF uncoupler) and cheap: $2-3 for most. You are thus down to two diodes, an amp, a resistor and a coil for your clipper. It may not work perfectly, but it's a good start, just set levels and check harmonics, I think. You engineers can correct me as required. Oh, I forgot an uncoupling cap for input or output if needed by circuit or lack of primary 50 ohm coil on tuned circuit(Just a few turns on top of resonant L). Hope this makes some sense. The compression result on my original Atlas was pretty dramatic: power out was always at max on the meter and the rig initiated thermal shutdown after two or three minutes continuous talk-time, but audio reports were always complimentary. 73, K9ZAT.

From: tjp010@sp2.power.uni-essen.DE
Message-ID: <3342DADF.3D5@sp2.power.uni-essen.de>
Source record: 178716

Dear Members,

some time ago I found a German weather-radiosonde for air-borne (baloon) measurements, Type E076. I could reactivate it because of only minor damages.

Technical details I found out:

Weight: 0.450 Kp incl. styropur case, without batt.
Power supply: 12 Volt Batt., switched by a reed contact
Oscilator Freq.: 100.95 Mhz
Output: <0.25 Watt
Modulation: FM
Sensors: Air-pressure, -temp., -humidity
Data transmission: 3 variable NF tone frequency bands, one for each sensor

The equipment I use:
-Different short wave receivers
-Ham-Com Ver. 3.0 plus Ham-Com demodulator on RS 232
-JV-Fax Ver. 7.0
-PC Weatherfax prof.
-Packetmon. 3.1
-self-written or adapted programs in TURBO-Pascal Ver. 6 & up

My questions:
Who knows more about the details of receiving and decoding the transmitted data?
Does someone have TURBO-Pascal procedures (source code) for parallel analyzing multiple frequencies?
Can someone give me a hint or a link on this subject?

Thanks to you all in advance,

Dr. Bunk

From: FCFB17A@prodigy.com
Message-ID: <5huqsi$m5e@newssvr01-int.news.prodigy.com>
Source record: 178718

Hi Zack. The TS850 is a great rig. I still have the one I bought three years ago and my new FT1000MP. The TS850 does have a great receiver with exceptional dynamic range. I have had both rigs on the same antenna and using an antenna switch to go back and forth on various signals I found no noticeable difference in copying very weak signals. The FT1000MP has a few minor pops as you tune across the bands (from the synthesizer??) - I have never heard that on my TS850. The receiver is also very quiet on the TS850. The only thing that annoys me about the TS850 is that if you use high fidelity headphones there is an annoying hiss on the audio when you plug into the headphone jack on the radio when listening at low volume levels. If you use an external speaker that has a high cut filter, then the hiss goes away. The FT1000MP does not have that problem. The receive audio is very good on the Kenwood. The slope tuning works very well at reducing qrm from close by stations. The speech processor also is very effective when applied judiciuosly. The internal antenna tuner has a very wide range - mine will tune my 80 meter dipole on 160 meters (not that it will work well though!). It has a audio monitor unlike some of the competition and the quick memo pad is great for dxing. I really like the FT1000MP also, but plan on keeping the TS850 as a backup. It is too good of a rig to let go for what they are getting these days on the used market and an incredible bargain for anyone looking to buy a great rig. Just my two cents worth. Good luck! --- Steve N9ROU

Can anyone comment on the quality and performance of these microphones for
the Yaesu FT-50?

Speaker/Mike MH-34A2B

Ear Piece Mike MH-37A2B

Specifically,
1) How good is the audio on each of these?
2) How well does the mike on the Ear Piece peform?
3) Do they firmly connect into the FT-50 and are not subject to
accidently falling out?
4) Does the Ear Piece Mike utilize the PTT button on the FT-50 or
is an addtional PTT switch provided?
5) Are there any other attractive mic options that folks have found for
the FT-50 (throat mikes, etc.)?

Thank you for your comments.

Aloha,
Chris KH7CL

107. WTB: Kenwood DG-5 For TS-520S

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-02 00:00:00 UTC
From: Douglas Gavilanes <gavilan1@earthlink.net>
Message-ID: <33423F52.210B@earthlink.net>
Source record: 178721
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I know I posted this a couple of weeks ago, but here it is again, as I received no response yet.

I am looking for a DG-5 digital display unit for the Kenwood TS-520S. For the last few years, I've been trying to get a friend of mine, Tom, N6BGN, to fire up his rig and get back on the air. Tom and his late wife moved into a community with CC&Rs a few years ago, and he couldn't put up an outdoor antenna, so his radio sat and collected dust. I tried to convince him that I could install any number of antennas in his attic for clandestine QSOing, but never got anywhere. His wife passed away in September, leaving him alone, and I've finally convinced Tom that he should get on the air, make some friends, and chew the rag. He is now reluctant because his TS-520S has an analog display, but said that if he could get a DG-5, he'd feel confident operating the rig on the proper and precise frequencies he has priveledges for (he's a stickler for proper operation). In any case, to make a long story short, if I can get Tom the DG-5, I can get him up on the air and back in circulation.

If you have a DG-5 sitting around and needing a home, please E-Mail me with your price and I'll get back to you right away.

Thanks in advance,

Doug Gavilanes, N6XQY
Garden Grove, California

108. On Glass Antenna - removing

Trading in the car this weekend.

I need to know what is the best way to remove an on-glass antenna
without damaging the antenna or glass.

With that in mind... what's the best way to re-apply the antenna on the
new car?

It's a Larsen UHF on-glass antenna.

Please e-mail... nessman@servtech.com

Thanks!

You guys want bad? Try computer equipment that has been sitting in a machine shop for several years -- no special cases, covers, or what have you for that rather harsh environment. The machine oil mist is in the air and gets into everything out there!

We don't try to resell the stuff when it gets old. It just either gets junked, salvaged for good parts, or given to whoever wants it.

Last year, I sold a BBS system that had been salvaged from a house fire. The equipment suffered some bad smoke damage. I was up front and honest about it to everyone... plus the campfire aroma would be a dead giveaway. Sold everything I had. I kept the asking price reasonable, and I didn't turn down offers, either. To this day, I am still using a Pentium 90 system that suffered the most damage (case warped from the heat and banged around by the fire department pretty bad). Thing works as good as new -- and the fire was about a year and a half ago.

Zack....

I own one and use it daily. It is one fine radio. I have had not
complaints. Has worked flawlessly since taking it out of the box. It
has been on FD several times. Get a large 13.8 vDC power supply for it
too...like an Astron 35M. I contest and DX with this unit. It is the
main unit. I highly recommend them....and they are coming down in price
on the used market.

> --
> Mark Grandstaff KF7JA mgrand@bmi.net

I have a newer model also, the articles by Scott Sykes work's just fine.
It is not a part of the 'pulling the plug method'.

You just remove the solder jumper 1 and the freeband resistor and it's
done.

The removal of the solder jumper 1 is hardware enabling of the
sequence 'hold down LAMP and KNOB by powering on'
(You can switch from BAND_X1 to BAND_X3)
(usually MARS/CAP)

The removal of the freeband resistor is hardware enabling of the
sequence 'Hold down LAMP and PTT and KNOB by powering on'
When you see BAND_X1, push KNOB for 1/2 sec. and rotate.
(You can switch BAND A , B, C , D , H , F or FrEE)

With the hardware MOD's you will not have the ability to switch
to the xxa and xxb BAND's (you probably not need them anyway)

If you don't want to make any hardware MOD's you can use the
software MOD's, you can have any BAND you want, you will only

not have the ability to switch from one BAND to another becouse
the hardware switches are not enabled.

Of course you can use the hardware and software MOD's together.

Indi.

The AT-600 has a street price of $299 (HRO, CSI, etc.), The 5-watt
version, AT-600-HP, has a street price of $329. You don't have to be
near an HRO. They will ship it to you for free and won't charge you
sales tax in most states that they don't have a store in.

Message-ID: <19970402151100.KAA10265@ladder01.news.aol.com>
Source record: 178764

For a year I have been powering my whole station on HF (Knwd TS-440s) and Vhf 2 m. packet and 2 m FM voice on a REGULAR 12v 850 amp/hr battery and an automatic 2/10/200 amp charger (that will cut off) under the floor of my house. It has served well with very little maintenance. I topped off the water last fall and am due to do it again now. It used very little water.

The reason for going with the regular car battery is that a deep cycle battery is designed to be almost completely discharged before being charged back. A conventional cranking battery discharges some but then is immediately charged back. This is what you have in a ham shack. The battery will be discharged some by equipment drain but the automatic charger kicks back in and recharges it back to full level. I have very good regulation and almost no hum, only a little when in charging mode, not enough to hinder any communications.

From: QESK41A@prodigy.com
Message-ID: <5hu0gg$1drq@newssvr01-int.news.prodigy.com>
Source record: 178768

Just a few questions on the FT-8000R.

Is there a CTCSS decode module for this radio? I've seen mention of encode, but never any mention of decode capabilities.

If there is a CTCSS decode module, what is the part number?

If there is a CTCSS decode module, does it allow for efficient scanning? Right now I have an Alinco DR-600T in my truck, and although it works fine, it will stop on active channels even if the tone is incorrect. I have a FT-50R with the FTT-12 keypad and it interogates CTCSS during scan and will not stop on a channel if the CTCSS doesn't match. I scan many different repeaters in the commercial bands, and need a radio that will continue scanning if the entered tone isn't active.

What extra features do you get from the ADMS-2C software? Does it allow for limited alphanumeric channel tags?

That should just about do it for now, I've been looking at this radio for a while, and it looks like my next purchase. Thank you in advance for any and all replies.

Source record: 178770

HI, I have a problem that I need help with.

Here it is: I just got a Phelps Dodge Commercial antenna that I believe is tuned for the 160MHz band.

Phelps Dodge does not make antennas anymore so I can't get any info from them.

The antenna is approx 20 feet tall and has 4 loops attached to it they alternate sides. The wiring harness is inside the poleas opposed to being outside where I can see it.

I want to convert this antenna to the 2 meter band.

How can I make a new wiring harness for it and do I have to change the size and or spacing of the loops?

I don't even know what impeadance the loops are.

How do I find out and how do I make the harness? 1/4 wave lengths? etc.

Any help would be greatly appreciated.

Thanks,

Scott Sidener N0WFL sidener@umr.edu

From: "Mr. Nathan Hinkle" <dnhinkle@humboldt1.com>
Message-ID: <334289E6.4E7F@humboldt1.com>
Source record: 178772

Hi,
Is there anyone that can give me some suggestions on the repair of an Icom IC-2AT? I am looking for a tech repair manual. The radio will turn on in the normal fassion but won't receive or transmit. I can turn down the squelch and background noise blares out of the unit as though it is working but when I transmit on a separate radio set to the Icoms freq. it hears nothing. Also, the light for transmit doesn't come on when trying to transmit. There is no output from the radio. Can anyone out there help with this problem or ever had a similar problem with an Icom 2AT and fixed it?

Thank You
Nathan Hinkle N6CCR :)

> Why is everyone saying that the at-600 is $100 less than the htx-204? The
> 204 is $399 and the adi is $349. What gives?

Because the $349 is the manufacturer-direct price, not actual retail. HRO has them for $300 right now. The AT-600HP (with the 12V, 600ma battery & charger) will be $330.

Can anyone comment on the general quality of ADI radios? I'm taking my tech-plus exam on Tuesday, and pretty soon thereafter will be on the market for a dual bander. The ADI looks like a good buy, but I haven't any idea if they make good radios in general.

Of course, any specific comments about the AT-600 (or the HTX-204) would also be most welcome. What I'll be using the radio for is in-field com during wilderness rescue missions here in New Mexico. I need a reliable and fairly sturdy radio, preferrably light-weight. The dual-bander is desirable so we can set up in-field crossband repeating to improve com between search teams and base camp, but I can't afford much more than the AT-600 would cost. I might give up on getting the dual band radio right now and just go for a 2M, but the AT-600 is tempting.

> I think I have narrowed my choices to one of the following:
>
> Collins KWM-2a
> Drake TR4-C
> Kenwood TS-820
>...

All of these are good radios, although a clean KWM-2A and its power supply will go for more than "a few hundred", probably more like $500 - $600, I think. Also remember that the Collins and Drake rigs on this list are all-vacuum tube radios, and those tubes are getting harder and harder to find; some of them are not being made any more. The TS-820 is all solid state except for the finals (and maybe the driver; I'm not sure), so your tube problem is much smaller.

You might also want to consider a Yaesu FT-101. Some of the later versions, like the 101ZD, are very fine radios, and are also all-solid state except for the driver and finals.

> Once I get one of these radios, what kind of inexpencive antenna can I put
> up?

I've had very good luck with a G5RV dipole. Very cheap and easy to make, good performance on most bands. You must use an antenna tuner, but those are available at very reasonable prices. I've logged over 150 countries with that dipole and 100 watts.

Best of luck, and 73...

>I'll support them (Amsat).
>Jack

Well gee, Jack, if you're willing to pay the difference in launch costs, AMSAT will be happy to use a different launch supplier. But realize that ESA has only had one launch failure with an AMSAT satellite on board, that was P3A, and our ride was *free* on that one because it was a developmental flight. ESA has given amateurs a free (or very reduced cost) ride up until now, as a piggyback payload, and they're only charging $100,000 for the P3D solo launch to GTO. If you know of another launch supplier who'll give us a ride to GTO for $90 a pound, lets hear about it.

The Chinese Long March (which doesn't have a sterling success record) costs 10x as much. Atlas II is even more (and has had failures too). Titan holds the all time record for longest launch delay, 1000 days sitting on the pad before it was ready to go, and Titans have blown up too, and cost even more than an Atlas II launch. And Shuttle is over $20,000 a pound, can't even reach GTO, and has had a spectacular failure of its own. The Russians recently had a blown launch too. Now Proton is about the most reliable launcher in the world, but guess what a GTO flight costs using it? It's quite a bit more than a Long March.

ESA gives amateurs a very cheap ride (way below their cost). The tradeoff for that has been some launch delays, and one launch failure, because we get all the new developmental launches at that price. That's a good tradeoff. We couldn't afford to launch on Atlas, or Titan, or even Proton.

Huh? You can work the microsats with a dualbander, even in some cases
a HT dualbander. If you don't have either of those, a $50 80 watt GE
Exec II or 110 watt Mastr II can make a dandy UHF uplink transmitter.
Use the temperature compensation input of the Icom for doppler tracking
and/or VXO. You've already got the 2m gear apparently if you're working
the mode A birds. Or you can certainly use one of the converter circuits
in the various Handbooks to translate receive down to the HF receiver
you've got to have to work mode A. Antennas are merely a matter of a
wooden 2x2 boom and some aluminum clothesline wire for elements.

If you can't get on the microsats or mode B birds for under $100, you
aren't trying.

We are looking for an RF engineer to help us start a micro-radio FM station in Seattle. The station will cover a range of things including news, music and spoken word. We have a motivated, energetic group of people. We have a fair amount of equipment. But we don't have a working transmitter, and that's where you come in.

So far we have two transmitters on hand. But neither one is putting out clean signals, so we're up against a wall. We need help from someone who knows RF design and troubleshooting. Current FM broadcasting technical practice is a big plus. If you have access to test equipment, that would help too. Our technical expertise is actually quite good and we've gotten pretty far ourselves -- now we just need your help to get us over the top.

If you think you can help, please contact cameron at 206-729-8409 or email slr@scn.org.

However, according to a posting in a net-abuse group,

putting garbage in your E-mail header is illegal! (You know, the law
about how you have to type your name and fax number into your fax
machine when you set it up...)

so, by putting the real E-mail address at the start of the posting,
perhaps one is trying not to get arrested while still avoiding spam.

One could use just one line or two instead of the cute box...

147. Questions re: Palomar Engineers "Tuner Tuner"

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-02 00:00:00 UTC
From: Michael Melland <badger@vbe.com>
Message-ID: <33430DD9.24F0@vbe.com>
Source record: 178793

In several magazines and Palomar Engineers catalog they are selling a device called a "Tuner Tuner" (a 50 ohm noise bridge) which thhey state is placed in the line before your antenna tuner and is used to tune without transmitting. Have any of you had any experience with this unti ? Does it seem to work well ? And for the rest ... is this type of device considered useful ?

Thanks and 73 de Michael Melland

>Jeff Gregor / N1UDS

Hello Jeff. Are you using an outdoor antenna for the HTX-202? I ran
one of these radios right next to my computer with no problem. I used
an outside antenna, though. If I put the stock rubber duckie, (or any
indoor antenna) back on the radio it did pick up lots of noise from
any RF source in the room.

I don't ask the RS clerks for anything except to see the product and the
manual. Then, while manual open, I fiddle-fool with the toy. Then,
when it goes on sale - and they always do, I whip out the ole plastic.
I have never not answered one of my own questions ;-) Its that simple!

Hey, I'm stuck with an ANLI/Premier AT-4 antenna from AES/Las Vegas. No assembly required, nothing to go wrong, returned in same plastic sleeve as received - as new. They "re-returned" it to me (hmmm, should I check my charge card for more shipping charges?). I'm going to Radio Shack when they carry a dual-band antenna for that spiffy new dual band hand-held.

While stationed at Osan AB, Korea in 1979, I worked with a technician
whose wife routinely took a hammer to his hobby toys. No, he wasn't an
amateur, but if you ever run across a piece of vintage Pioneer audio
equipment with a "hammer tone" finish, you'll know the rest of the
story.

Thanks to all those who responded to my query about hf radios. I have a
somewhat better idea of what to look for.
I think I have narrowed my choices to one of the following:

Collins KWM-2a
Drake TR4-C
Kenwood TS-820

Once I get one of these radios, what kind of inexpencive antenna can I put
up? I am currently living in a tornedo magnet, and can not put up a tower.
Can some one suggest an inexpencive antenna, ie easy to build homebrew or
one less that $100. Also will I need an antenna tuner with these radios
and if so what should I look for.

Thanks for your help.

That could explain a lot.

When you have partially discharges a NiMH pack, is it best to top it off or
should it be
discharged completely? I usually top them off and periodically run them
down all the
way. Does this hurt them? (I don't run them into the ground, just to the
cutoff V).

177. FS: TI 320C5x DSKs (DSP Starter Kits)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-02 00:00:00 UTC
From: Randy Cole <cole@netcom.com>
Message-ID: <3341E0B2.1C@netcom.com>
Source record: 178930

I have several TI 320C5x DSKs (DSP Starter Kits) for sale. The TI part number is TMDS3200051. They are all brand new and have never been opened. The C5x DSK has been featured in several QEX articles, including
one last August about packet voice, and has been used very successfully in EME applications.

These kits are designed for students, experimenters, and developers who need a simple, low-cost way to prototype DSP-based applications for the TI 320C5x series of DSP chips. The kit includes a small (2.5" x 4") PC board with a TMS320C50 processor, a TI Analog Interface Circuit (AIC) chip with 14-bit A/D and D/A capable of sample rates to 19.2 K samples/sec, RCA jacks for analog I/O, and a 9-pin RS-232 host interface.
The kit also includes a simple assembler, loader and debugger for the PC, a kit manual and a TMS320C5x manual.

The latest versions of the software as well as several user-written demo programs can be downloaded from TI. The URL is:

ftp://ftp.ti.com/mirrors/tms320bbs/c5xdskfiles/

The board requires a 9 volt *AC* power supply capable of >250 ma. A 9 VAC
780 ma supply with the right plug is available for $8.99 from Radio Shack
(Part # 273-1630).

TI sells these through distributors for $99, and purchasing them from distributors can be a hassle. I'll sell them for $60 each shipped within
the US. Terms: Price is firm. The units are guaranteed against DOA. Immediate shipment if payment is by USPS or other money order or cashier's
check. Personal checks are fine but I'll wait a few days for them to clear.
At this price COD just isn't worth the hassle, so no CODs, please. If you
want one send me a message and I'll reply with the information you need to
order one.

================================================================================
Motorola Radios & Accessories (see below for more info)

$400 shipped for the lot

qty 1 HT50 154.6 MHz
qty 4 HT90 154.6 MHz
qty 3 HT90 154.57 MHz
several partially assembled HT90s and HT50s

qty 1 NTN4864B charger
qty 6 NLN7646A charger
qty 6 NTN4864A charger

qty 14 NLN7434A & similar batteries
qty 1 NTN5453A battery

qty 13 BNC whip antennas various lengths
qty 1 HT50 screw in antenna

I would like to sell all this together if possible. The chargers are in
decent cosmetic shape, some have marker writing on the front. The radios
are somewhat more beat up. All of the radios were used for data
transmission, all have had the accessory jack removed. Some have a short
coiled cord with a strange connector in place of the jack, some have
nothing at all here. I have tried most of them, however, and they all
seem to function anyway. The condition of most of the batteries is
unknown; I charged up a few to test the radios, that's it. Because of
the condition of this equipment, I offer no guarantees on it.
================================================================================
HP 1222A Oscilloscope $100 shipped

>a bird I can use, I won't be cheap.
>
>Do you have any idea how I can contribute to the Russian Amateur
>Satellite Program?

Fair enough. But it's interesting to note that under your logic the only satellite project I should support is SAREX/MIREX, and the only ham radio band I should be interested in keeping as a ham radio band is the 2 meter band. Why should I care about 70 cm, 10 meters, or any other band I'm not on right now?

I don't think you're correct with your comments that AMSAT-NA doesn't support Mode K and A satellites. There's an excellent book available from your local Martha on how to get started on the Russian satellites. And it continues to sell well, indicating that there is interest in those birds.

The keplerian elements for the RS birds are distributed each week by AMSAT-NA, not to mention WWW resources, AMSAT-BB, and other online resources.

If you want to contribute to the Russian amateur satellites then I'm certain we can find the appropriate contact for you. Or a much closer source to home, SEDSAT, under construction at the University of Alabama Huntsville, will have a Mode A transponder. I'm certain they'd appreciate your financial support too.

Phase 3-D may not fulfill every ham operator's dream of a perfect satellite, but it will increase the capabilities of future amateur satellites, which - in the long run - will benefit all of us.

Hello all, I use a 20 meter hamstick and have had great results with
it. The antenna works better than it has any right to, but I
couldn't
exactly call it broad banded-about 75 khz on 20, and that's
stretching
it. I also use a 40 meter hamstick, which has about a 25 khz
bandwidth,
but don't use it much because my car (a 95 Escort) raises a hell of
a
racket on 40. I don't have any experience with the Outbacker, but it
does have one big advantage over the hamsticks-you only need to
carry
the one to cover the bands!

No matter what radio you get, there will be opinions that are pro and con. Choosing to enjoy the radio you buy INDEPENDENT of other people's opinions might be more important that which radio you choose.

If mine were stolen, I'd replace it with the same. Of course, I was told it was an "Extra's radio" :-)

194. TS-520S want/question

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-02 00:00:00 UTC
From: w8pu@aol.com
Message-ID: <19970402094201.EAA29698@ladder01.news.aol.com>
Source record: 178947

I am looking for at least the bottom cabinet and rf cage cover for a TS-520S. I will take both the top and bottom cabinet if available. I fixed up one that was given to me but with missing parts.

Also if anyone still uses the 520, my S meter seems way over sensistive when I calibrate it for 50 uv for S9 per the owners manual. Any ideas? Very strong stations peg it. If I cal it for full deflection with the RF gain fully ccw then it is too stingy. Thanks....

>Drake TR4-C
>Kenwood TS-820

I personally don't think you can go wrong with any of these three.
Slight preference for the KWM-2 and TS-820 as they use 6146 tubes in
the final amp. The Drake uses TV sweep tubes which are somewhat less
sturdy -- but the Drake circuit seems to work them well within limits
as that radio is NOT known for blowing finals. (unlike some other
rigs!)

>Once I get one of these radios, what kind of inexpencive antenna can I put

>and if so what should I look for.

Do you have any trees, poles, TV antenna masts, etc. at least 20 feet
high you can use? Dipole antennas can be built easily and
inexpensively. There are two basic multiband configurations:

1. If you buy a good tuner (I use an old Heath SA-2040) with
balanced
feed, you should put up a single dipole with ladder line feed. Make

it as long as possible. In my case, it's 132 feet long, and works
great on all HF bands. Of course, it does require a tuner which may
push your budget.

2. Use a coaxial feed, and put multiple dipoles on the same
feedline.
Start with an antenna 66 feet long (for 40 meters); this will work on
15 meters also. Add dipoles for 20 and (if possible) 80 meters.
This works without a tuner, but it also requires more end supports.

Dave....
Just a quick question. I just was given a basket case TS-520S and was able to get it going. The only thing that is bugging me is that the S meter pegs on strong signals. I have cal'd it per the owner's manual (50uv for S9) but no help. How is yours?

sean hall (shnews@laser.net) wrote:
: Ironically, the Hustler wide-band resonators seem to work fairly well.
: Maybe it's the center loading. QST did a mobile antenna test about a
: year ago. The tunable screwdrivers won, hands down, but the Hustler
: was next in efficiency, with the hamsticks at the bottom of the list.
: I guess nothing beats a full-wave dipole. After my experiments with
: HF mobile, I keep my rig at home.

I've no experience with Hamsticks, but have used the 40 and 75 meter Hustler coils. Making contacts with 100 watts into the 75 meter coil was frustrating, but the 40 meter coil works well. On long drives during daytime hours I've had several enjoyable QSOs on 40 meter SSB.

I've got the high-wattage 40 meter coil, and it is indeed narrowbanded: about a useable range of 50kcs. I usually tune mine for around 7.225, and then put a small MFJ mobile tuner inline if I want to work CW on the lower end of the band. (I'll admit to several mobile CW/straight-key QSOs, at highway speeds.. not a safe practice.)

However, in the evenings when the skip lengthens, and the 40 meter foreign broadcastters start coming in strong, 40 meter mobiling is indeed very difficult. But daytime contacts are usually fairly easy with the 40 meter Hustler coil.

Yes my shack is open to all Amateur Radio operators to >inspect<grin> I take pride in my equiptment, thusly I dont smoke around the >goods..

Do you get inside the units and clean out the pots and the caps and the connectors? Do you get inside and clean the molecular layers of smoke particles from each and every part? It's what you can't see that will kill a piece of equipment. Even if you don't smoke around your gear, you're still breathing that corrosive stuff out of your lungs. Yea, tell me your lungs are nice and pink. My butt cheeks are growing together at this very moment too.

You can't see it or smell it because you are a smoker. If you were not a smoker, you could smell it a mile away.

ICOM stopped making the band units because of slow sales. You can not
build them and only sell 2 to 4 a month. The demand is not out there
for these units unfortunely. For a factory to set up a line there
needs to be more than a few units sold. Sales should be for several
thousand units.

Jim:

I know that there are some kits available to make keyers... I was told
that Palomar Engineers made excellent keyers but their current catalog
does not show one. I called them two weeks ago and they said that while
the keyers (one message memory- PK50 & one not- PK44) were not cataloged
they could send me info on them (they faxed the info to me). I liked
what I saw and called them... they had none "made up" but I was told
that they would "put one together" for me and ship it within two weeks.
Wow, in this day and age real customer service ! I know that it will be
quality stuff like all of their products and I still can't get over
their willingness to help me out. Great company to deal with IMHO.

There is a Ham Radio Outlet store in Oakland and another Ham Radio
Outlet in Sunnyvale.

There's a small store called the Base Station in Concord (East Bay)
that sells ham stuff.

Quement Electronics in San Jose used to have a large amateur
department, but they're out of the ham business.

As to the origin of the radio, when I first saw it (and I am a Radio Shack employee and have worked and seen the rig), it struck me as an I-Com. I'll admit though, that squeezing the original designer out of our tech support is not that easy to do. All I can say is that there are some benifits to being able to walk down the street and pick one up.

No offense, sir, but there isin't an AES anywhere around where we are.

Now I will also admit that when I purchaced my mobile rig, a Standard CS1208DA, I did have to mail order it. Then again, I was also on an aircraft carrier and didn't have to worry about waiting the month or so it took my package to arrive at the stateside address.

I am proud to say that my store, in Sherman Texas, has not one but two hams working there. Myself and my manager are both active on 2 meters. My boss did purchace one of the rigs and he enjoys it immensely.

(If you notice I am trying *NOT* to start some kind of flame war here)

Of the functions you mentioned, the HTX-204 does offer over-the-air cloning... it takes about six or seven minutes and copies everything from the memories to the preferences to the power-up screen.

One last thing then I will stop confusing people by not making any sence while trying to stay politically correct:
Nothing is Better than One Person's Opinion

Until Later!

I was sure Yaesu was offering tech support via email for their current models (ft50, ft51, ft8500, etc). In fact, I thought I had seen the email addresses advertised via the Yaesu homepage, but I just checked it & all they list are phn #s & snail mail.

Does anyone know if Yaesu offers tech support via email?

If you're into kit building, I strongly recommend the CMOS Super Keyer III. It was outlined in QST a couple of years ago, and I suspect it should be in newer editions of the ARRL Handbook. It has 18 nonvolatile memories, and all the extras--weighting, linear amp compensation, etc. I have had mine for a year and I love it.

If you have any questions about it (which I may or may not be able to answer), please e-mail me.

Greetings,
I have for sale a late model Kenwood TM-742A with the deluxe 7 meter remote kit. The radio has the 2mtr and 440 modules installed. I never installed the third module. The remote kit includes the control head cable, separate remote mic cable, separate remote speaker cable that will support up to three individual speakers, and a deluxe filtered DC cable. This radio was just checked out by Kenwood and is in A+ condition. I would like $650 + shipping (firm). If you are interested please drop me an email. A family emergency forces sale.
Thank you and 73,
Scott / KC6TTR

PS/ Extended TX/RX mod done. Includes owner's manual and mobile bracket.

depending on the adhesive and your skill level:

If mounted with double stick type tape, a heat gun can be used to soften
the adhesive.

If mounted with "Super-Glue" (Eastman 910, etc.) a solvent for this glue
'may' work...

hope this helps

Bob

A little bit of heat from a nice summer day or a hair dryer, and careful
application of a thin-bladed putty knife.

>With that in mind... what's the best way to re-apply the antenna on the
>new car?

A Larson remount kit! :) They cost around five bucks at most Ham radio
outlets or AES if you have to go mail order.

241. Re: FT50R Software Mod's

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-03 00:00:00 UTC
From: Ingra-Beton@t-online.de
Message-ID: <5i082s$j99$1@news01.btx.dtag.de>
Source record: 178694

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==========
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in
> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the
Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)

*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
....
Now, to do a band change do as follows:
- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)
- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.☐
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
----
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I
----
^ Band-Set_Byte (Address 0CE7)

When you set the Rig in a band (with the Band-Set_Byte) then you can switch
from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then
press the function key to switch to X1 Subband

The TX for the X3 Bands is:

```
BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470
C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and
I am to tiered to examine them closely and write them down. I guess that
they are not very interesting.
```

ARS lost - effect

The FT50R has e BAND_PLAN like database and depending for witch country
your unit is configured (A,B,C,D & H) it is using the repeater database□
from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499)
there is no data in the database because those band's are not for any
specific country. That is why the ARS does not work any more, and not□
same mess up (magic) in the memory of the unit.

```
That does not mean that it is not possible to enter additional data to
the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any
ordinary country BAND_X and it will work again.

Original .TPL file
------------------
If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)
3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:
-----------
Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
```

unit, and I am quite pleased with the results. Your mileage may vary, etc.

Al,
If you look at the Phase 3D transponder matrix, you will see that there is a
15m uplink and a 10m downlink. Think of the possiblities...

Tornado magnet.....har har I like that. I always said those mobile homes attract them. When I lived in one, I used one of those tv antenna push-up mast to support various antennas. You can get them up to 50ft now. I had a 30ft model. Radio Shack sells the 30ft but you'll have to order the 50ft pole from a Rohn dealer such as Texas Towers. They run about $70 or so. Collasped, they are only 10ft long and make a very convient support for wire antennas.

For the top insulator, I used a pvc plumming T slid down over the top pipe. Drill holes in the ends of the T for your wires. The T can pivot on the mast. I used 80, 40, 20 , 10 meter dipoles in parallel, feeding them with coax and fanning the dipoles out like an umbrella. The G5RV concept will work too if you don't mind the tuner.

Although rather flimbsy, those mast don't need any guy wires when hold up wire antennas. Just strap it to the side of your home. The dipoles will do the rest. I mounted the antenna on top first then sit on the roof and pulled up the mast sections one at a time. Wear gloves so you don't pinch your hands.

>>Anyone know or heard good or bad about the new HTX-204 from Radio
>>Shack.

It's a very nice unit.

>>I hear the new 2m/70cm hand held is made by Alinco.

It most certainly is NOT made by Alinco.

>>I would like to hear comments before I go out and purchase one.

The only comment I could make is that I would rather purchase the
ADI AT-600, 2nd battery (like a Maha MH-CNB-153 Ni-MH 7.2V 1200mAh
battery), and a good speaker-mike for about the same price as the
Radio Shack unit.

And the ADI has a couple additional features, too.

249. Re: Ham Stick HF antennas?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-03 00:00:00 UTC
From: Steve Ellington <n4lq@iglou.com>
Message-ID: <334312BC.4410@iglou.com>
Source record: 178735

I use a 40 meter Hamstick on the roof of my full size van. The metal provides a good ground plane and I get excellent signal reports. So good in fact that I just had to compare it to my 160m horizontal loop at 60ft.

I parked the van next to my shack and ran some coax out to it from the antenna switch inside. I made several contacts and determined the stick to be down 20db from the loop in most cases. Still though, I get constant reports of 599 and "excellent signal for a mobile". I operate 40cw only when mobile.

Having had such good results, I purchased the 80 meter Hamstick and even ordered the extended lenght whip for the cw band. Results were pathetic. Almost no one could hear me. For 80m, one needs something like an oversized Texas Bugcatcher.

Another thing....I always need to use either a capacitor at the base of the antenna to ground or my little tuner at the rig inorder to match the system to the rig. This is not made very clear in advertisements for these antennas.

Iffen I remember correctly (and I am sure that someone will
correct me if I am wrong!) ...

That was an inexpensive SWR bridge, imported by Swan in
their later days (late 70's), made in Japan, that was good
for HF only (no VHF) ... probably would handle a kilowatt
(but I probably wouldn't do it) ... most likely about 20%
accuracy or so ... sold for something around or under $20
while available.

Source record: 178745

>Anyone have experience with the Ham Stick HF antennas from
>Lakeview Co.?

I have used Hamsticks on 40 and 20 meters (mostly 40) for the past 3 years and like them for the following reasons:
1. They are very light and can be used with a trunk lip mount thus are easy to install and require no holes in the car.
2. Being installed on the trunk they are high up and radiate better than a bumper mount in which the antenna runs near the car for a couple of feet.
3. They are durable and have survived the many tree branches I was unable to avoid and don't require a base spring.
4. They are cheap ($20) so if one does break or get ripped off I don't cry the big tears as if I had an outbacker ($200+).

They are reported to be less efficient than the bigger antennas but that is the price you pay for a compact good looking antenna. However I have never had any problems with mobile QSO's and complete most of them so that is the bottom line. They are narrow but if you use one of the modern rigs with an auto tuner you should get the whole band with no problem.

I run a TS50 at 50 watts (Reduced power-as I get power from the cigarette lighter and it won't supply the full 100 watts-again no holes) I know, I broke all the rules but hey, it was quick, easy and it works.

Oh yes, I work mobile CW only so the antenna bandwidth fits the CW band just fine.

This is general information, so I will post to the group,
versus private e-mail.

In your manual, there is probably a picture, showing
locations of various adjustment points.

Find the "Deviation Control" ... attach the tone output from
your tone deck to the center wiper of that pot.

Then, with some sort of VOM, look for +12 Volts on Transmit
... take the voltage feed to the tone deck from there.

Ground to any convenient ground point.

By the way, your radio is an IC-260A, not a "206".

Good luck!

265. $$$$$Money fast$$$$$

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-03 00:00:00 UTC
From: Paul Thorne <vacation@nbnet.nb.ca>
Message-ID: <01bc3fc4$cadaad40$8762a4c6@vacation.nbnet.nb.ca>
Source record: 178751

Read attached file for details.
THIS ABSOLUTLY IS THE FAIREST AND MOST HONEST WAY TO SHARE WEALTH!!

HELLO!!

Would you like to make thousands of dollars, quick and legally? Than take 5 minutes to read this article, it's going to change our life! What is 5 minutes of the life that you now have. Are you just snoozing,doing the same old thing? YOU WANT CONTROL OF YOUR LIFE OR GET BACK THE CONTROL YOU ONCE HAD? YOU WANT FINANCIAL FREEDOM????????

THAN YOU SHOULD ABSOLUTLY READ ARTICLE!!! IT'S TRUE!!

You can make up to or over $50,000.00 in 4 to 6 weeks, maybe sooner!
Keep reading if you want to take control of your life, if not, than have a great day.

One day I was browsing thru the newsgroups and read an article like this one. Since it that to do with making money, I was courious and decided to give it a try, and this is what it said:
Here we go.

A little while back, I was browsing through these newsgroups, just like you

are now and came across an article similar to this one that said you could make thousands of dollars in just weeks, with only an initial investment of

$5.00!
So, I thought, "Yeah, right,it's got to be a scam", but I was curious, like most of us, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200 newsgroups (there are over 22,00). So after thinking about it, and talking to my wife about it, who said I was nuts!, what does she know, I'am nuts anyway, I figured what else was I doing, and it's only 5 stamps and $5.00, right? Someone who has tried it says:

"I started receiving money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But then money kept coming in, tripling in size and multipying by 10 -20 times the amount that I got the first week! In my first week I had made about 30 -40 dollars.
But by the second week, I had made a total of over $1,000.00!!!!!
In the third week, I had over $10,000.00, and it's still growing.
This is my fourth week and I've made about $42,000.00 TOTAL, and the money is still coming in.......". Let me tell how this works and most

importantly, why it works.....also make sure you print a copy of the article NOW, so you get the information off of it, and begin making money. The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 6 seperate pieces of paper and write the following on each sheet of paper.....
" PLEASE PUT ME ON YOUR MAILING LIST."

It is also a good idea to put on that piece of paper the number of persons who you got the article from. Get five $1 dollar bills and place ONE inside

each piece of paper that you just wrote on,and fold each piece of paper so the bill will not be seen in the envelope (other wise nosey people who like to steal envelopes with money in it will get yours). Put one paper inside the envelope and seal it.

Do the same for all 5, you should now have 5 envelopes sealed, EACH have a piece of paper and a $1 dollar bill stuffed inside of the paper. Make sure those words that were stated above are on each paper. This is a service an 100% legal (refer to US CODE Title 18, Section 130& 1342, and Title 39, Section 3005, of the Postal and Lottery Laws).

NOW, BE SURE TO MAIL THE 5 ENVELOPES WITH THE PAPER AND $1.00 TO THE FOLLOWING 5 ADDRESSES:

1. Roland Lafontaine 2233 Jeanne Dr. Hastings Michigan 49058

2. Carl Fodor RD1 Box Y1.E.5 Weirtin W.Va 26062

3. David Zahn 65 E.Washington St No. Attleboro, MA 02760

4. Jean-Louis Pion 44 Seneca St. Cumberland, RI 02864

5. Paul Thorne RR#2 Site 4 Box 4 Hampton NB E0G 1Z0

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, 3 becoming 2, ETC.) You can slightly alter this article if you need to, editing what you need to edit.

STEP3: Post your amended article (with your name at #5) to at least 200 newsgroups. There are at least 22,000 of them). All you need is say, at least 200.

HOW TO DO THIS:

If you have Netscape 3.0 do EXACTLY the following:
1) Click on any newsgroup like normal, THEN click 'TO NEWS', which is on the far left when you're at the newsgroups page. This will bring down a WINDOW to type your message in.

2) Leave the newsgroup WINDOW like it is, CHANGE the subject box to something flashy like, "NEED CASH" $$$$ or READ HERE $$$$.

3) Tab once and you should be ready to type. Now, retype (only once)
This whole article WORD FOR WORD, except to insert your name at
#5, and to remove #1 off the list.

4) When you're done typing the Whole article, click on FILE in
THIS WINDOW, RIGHT ABOVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS
ON THE FIRST WINDOW. Click on SAVE AS when you're under FILE.
Save your article as a text file to your C: or A: drive.
DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU SAVE IT.
ONCE SAVED, move to 5 below.

5) If you still have all of your text, send or post it to this
newsgroup now, by just clicking send, which is right below FILE,
and right above Cc:.

6) Here's where you're going to post all 200.
OK, click on any newsgroup the click on 'TO NEWS', again in the
top left corner. Leave the NEWSGROUPS BOX alone again, put a
flashy subject title in the SUBJECT BOX, hit the TAB once you're
in the body of the message, and then click on ATTACHMENTS, which
is below the SUBJECT BOX. You will get another WINDOW to come up.
Click on ATTACH FILE, then find YOUR file that you saved; Click
once on the file, and then Click OPEN, now Click OK; if you did
this right, you should see YOUR file name in the attachments box,
and it will be shaded.

****

IF YOU USE IE EXPLORER IT'S JUST AS EASY...
HOLDING DOWN THE LEFT MOUSE BUTTON HIGHTLIGHT THIS ARTICLE.
THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO
COPY THIS ARTICLE. THEN PRINT THIS ARTICLE (FOR YOUR RECORDS) TO
HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO
TO THE NEWSGROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN.
TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE
LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL
BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO
AND THEN HIGHTLIGHT AND COPY IT AGAIN. NOW EVERY TIME YOU POST
THE ARTICLE IN A NEWSGROUP, ALL YOU HAVE TO REPEAT "CTRL" AND "V"
AND PRESS POST.

7) That's it. Each time you do this, all you have to do is type
in a different Newsgroup, so that way, it posts to 200 DIFFERENT
Newsgroups, you see?
Now you just have 199 to go!!
(Don't worry, each one takes about 30 sec.,once you get used to it)
REMEMBER 200 is the MINIMUM.
The more you post the more money you will make!!!
AND THAT'S IT!!!!

THAT"S THE ONLY 3 STEPS THERE IS!!!!!!!!! You are now in the mail order
business and will start receiving your $1.00 envelopes from vaious
people all over the world within days!!!!!! JUST REMEMBER THE MORE

NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE!!!
If you wish to stay anonymous, you can come up with a name, such as"manager" or "investor". Just make sure all the addresses are CORRECT.
LET ME TELL YOU WHY THIS SYSTEM WORKS SO WELL!!!
Out of every 200 postings, let's say I ONLY receive 5 replies, which is actually very low. So I made $5.00 with my name at #4.
Now then, each person who just sent me $1.00 makes say only 200 postings, now with your name at #4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. Now 50 people send you $1.00; that's $50.00 you just made! Now then your new 50 agents post 200 each with your name at #2, or 10,000 POSTINGS(50x200).
Average return is 500 at $1.00 each is $500.00!!!
And finally, 5,000 people make 200 Postings each with your name at #1. you now get a return of $50,000.00 before your name drops off the list.
And that's if everyone makes 200 Postings only, and if only 5 persons respond!!!! When your name is no longer on the list, you just take the latest posting that is appearing in the Newsgroups, and send out another $5.00 to the names on the list, putting your name at #6 again.
And start posting again. The most important thing to remember is, to realize that there are THOUSANDS OF PEOPLE FROM ALL OVER THE WORLD JOINING THE INTERNET EVERYDAY, THE EXPOSURE IS UNBELIEVABLE!!!!!
So, can YOU afford $5.00 and see if it really works? I did, and I think you can too.
TAKE CONTROL OF YOUR LIFE AND MAKE SOME REAL MONEY, THIS IS THE WAY!!!!!!
People have said, "What if the plan is played out and no one sends you the money?" So what! What are the Chances of that happening when there are MILLIONS of HONEST USERS AND HONEST PEOPLE who are joining the Internet and Newsgroups everyday and are willing to give it a try?
Estimates are at 20,000 to 50,000 new users, everyday, with THOUSANDS of those joining the actual Internet. REMEMBER, play FAIRLY and HONESTLY and this WILL WORK,
I PROMISE YOU!!! YOU JUST HAVE TO BE HONEST.
Make sure you print this article RIGHT NOW, also, try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. REMEMBER HONESTLY IS THE BEST POLICY.
YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!!!!!
GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND TOGETHER,
WE WILL PROSPER!!!!!!
**** By the way, if you try to decieve people by posting the messages with your name on the list and not sending the money to the people already on the list, you will not get much. Someone who did that made $150.00, and that's AFTER 7 or 8 weeks!
Then he sent the 5 $1.00 bills, people added him to their lists, and in 4 to 5 weeks, he had received over $10,000.00
THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT YOUR TIME!!!!!

NOT BAD FOR FINANCIAL FREEDOM!!!!!!!
IF YOU DON'T TRY IT, YOU'LL NEVER KNOW.IT DOES GENUINIELY WORK!!!!!

266. Help Kenwood 742 problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-03 00:00:00 UTC
From: Fred Lux <flux@gatecom.com>
Message-ID: <33439D8F.1102@gatecom.com>
Source record: 178752

Help! My Kenwood 742 has developed the following problem(s). When you turn it on, it comes up in the crossband mode with the remote function enabled. It will not accept any input from the control head, except to change power levels and to turn the function mode on and off. Pressing any other button results in the radio beeping at me. It will accept no input at all from the buttons on the microphone.

My wife was cleaning the inside of my mobile and turned on my radio, then proceded to "push all the little buttons" trying to turn it back off. I don't know if she has inadvertantly programed something into the computer control, or if the computer itself has "gone west". I looked in the manual to see if there was a way to force the computer to reset to factory defaults, but could find no information.

Any input would be appreciated.

267. Re: Ham Stick HF antennas?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-03 00:00:00 UTC
From: Joe <joentam@transend.com.tw>
Message-ID: <33448A39.359C@transend.com.tw>
Source record: 178753

Also CW mobile op (vibroplex iambic / 8044ABM keyer). I've used the 20 meter hamstick with the 80 meter "extended whip" to cover 30 meters (follow so far?) I got full band coverage with VSWR of 2:1 or less (of course, the entire band IS only 50 Khz). The antenna was mounted in the very center of a small Honda Civic hatchback; Had no problems getting a perfect 1:1 match at 10110 Khz. Using a low profile ball mount permanently attached to the roof, the antenna was high and in the clear of the entire vehicle. Wind loading was minimal, though occasionally noisy at certain speeds (whistle).

As a comparison, my full sized Bugcatcher was 10 to 15 DB stronger, but was too unstable to use while in motion. Bugcatcher used a 3 foot lower mast, the coil, and a 7 foot whip. No capacity hat on the bugcatcher, nor any capacity coupling at the base of the antenna. VSWR on the bugcatcher was 1:1 too.

Want a cheap antenna that works 30 thru 10 marginally? ...buy the ham sticks. Want an antenna that really works? Buy a bugcatcher or screwdriver.

73,
Joe

I guess you missed something. How about the technical expertise to be a
general class radio operator. The reply I am sure is about the creation of
a dipole or Windom or even a long wire with tuner. If any one cannot figure
out how to create the before mentioned antenna, then the person holding the
license should be under question.

I will be in the Los Angeles area this weekend and was wondering if anyone knows of any hamfests, flea markets, swap meets, etc. scheduled for 4/5-8?

Also, anyone have the number for W6RO - the Queen Mary station? I travel to LA quite often and have visited but the station was not on the air at the time.

273. A few questions on the Yaesu FT-8000R

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-03 00:00:00 UTC
From: QESK41A@prodigy.com
Message-ID: <5i0jgm$1d3o@newssvr01-int.news.prodigy.com>
Source record: 178759

Just a few, I promise to keep it brief.

Does the FT-8000R have a CTCSS decode module?

If it has a module what is the part number?

If it has a module, does it allow for scanning of freqs with interrogation for correct PL? I have an Alinco DR-600T that has the decode module installed, but still stops on active freqs even if the CTCSS tone is different (at least it doesn,t pass audio). I also have a Yaesu FT-50R that scans and interrogates--this is what I'm looking for.

Does the ADMS-2C programming software offer any additional perks? (i.e. limited alpha tags)

Thanks in advance.

Ed Burke

>
> If you have any hint, let me know.

It sounds like it's going up against the current limit setting. The
HRO catalog I have doesn't show a VLS series, but a VS series which
has adjustable voltage and current pots on the front panel. If this
is the type you have, crank up the current limit pot. If this doesn't
seem to work, open up the supply and spray some cleaner on the current
limit pot. I've had a bit of trouble with mine from time-to-time;
(the environment where my shack is collects dust and has a humidity
problem). If the pot's dirty, it could act like an open and the
current adjust/limit circuitry would go haywire. Good luck.

Greetings,

The digital display on my Kenwood TS-820S periodically goes nuts. It will be fine for days or weeks, and then one or two digits will go out or it will start displaying garbage. In some cases, it has even gone completely out except for two decimal points.

I have tried reflowing the solder connections on all the multi pin connectors on the boards of the counter unit and have used "DeOxit" on all connectors associated with the display. I know I have read somewhere in the past about a notorious problem with this display. Anyone have that info?

Thanks & 73,

Clark, KD9QI

Source record: 178578

>>Wait 'till Radio Shack has [the HTX-204] on sale!

What exactly IS Radio Shack's history of placing a brand-new product on sale? Have they ever done that in, say, the first six months of a product's debut? Or a year's time?

If I needed a product NOW - and saw it (or a competitor's product, with more features) available elsewhere for a lot less, I'm going to grab it when I need it...not wait for a "sale" that may never occur.

>>...Radio Shack's 30-day "NO QUESTIONS ASKED RETURN POLICY"...

A good policy, indeed.

Personally, I like to think I research the market well BEFORE I plunk down 300 bucks for anything. I look at not only what a store's "return policy" may be, but also the track record of the manufacturer, whether or not a "customer service" department exists, and available options/ aftermarket accessories.

I know I cannot call most Radio Shack stores for assistance on specific HTs. This is NOT to demean Tandy - that's just a given. We should not expect all Tandy employees to know Amateur Radio or GMRS or any particular "niche" of their catalog (although I am involved with an organization that has placed educational GMRS brochures in over 20 Radio Shack sotres in Southern California...).

>>At Amatuer Electronic Supply there is no return policy.

I cannot believe that a customer cannot return a defective unit to AES for a replacement...

But, again - we get back to our personal research methods. With proper homework, we make intelligent purchasing decisions. HRO and AES are working on so small of profit margins on some units, that they cannot offer a "30-day trial period" for us to abuse while we perform our "homework" AFTER the purchase, rather than BEFORE the purchase.

Thanks for the dialog!

293. Re: Ham Stick HF antennas?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-04 00:00:00 UTC
From: spammers@must.die.com
Message-ID: <wsandersE84KqB.2L1@netcom.com>
Source record: 178579

Mobile CW op? What do you use for a keyer? Do you mean that one of these days I'll get myself off my 8 WPM plateau and be able to copy in my head without breaking into a sweat? Right now I can't see myself being able to drive and copy CW without plowing into a tree. The joy in this is that I find copying at about 10wpm a wonderfully mind-clearing Zen-like activity, a lot like the first few times I ever flew an airplane. All other mental activity ceases - good stuff.

Speaking of Hamsticks, I made up a 40m dipole and I'm pretty happy. I haven't made any contacts yet because some S5 QRM started up from a nearby condo under construction the same weekend I put the antenna up, centered right on 7110, but the antenna tunes up to 1.2 SWR or better betwen 7.1 and 7.15, which is fine for this Tech Plus, and it's mounted inside right at the peak of the roof only 3 or 4 feet above the house furnace. Total height above ground is on the order of 25 feet or so.

Just be sure to follow the golden rule of Hamsticks:

DON'T CUT THE WHIP FIRST!

Mine matched only after adjusting the whip in and out 1/4" at a time. The current whip length is shorter than the included tuning charts indicate by about 2 inches - the whips are inserted almost all the way in to the point where they touch the "internal wire" the instructions warn you about. (If the whip actually touches the internal wire, you will short out a few turns of the antenna and the SWR with go way off.) Your mileage will almost certainly vary since you won't be setting up an indoor dipole. But remember - DON'T CUT THE WHIP FIRST until you have worked the whip all the way in 1/4" or so at a time. And then, I'd only cut an inch or so off at a time.

If you call a xtal maker and tell them the desired freq, they will
calculate this for you. It is also in the GE manual if you have that.

I've used Bomar with good results.

301. KPC-3 PLUS Problems

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-04 00:00:00 UTC
From: niel brieger <nbrieger@ix.netcom.com>
Message-ID: <334581D8.56DD@ix.netcom.com>
Source record: 178587

I'm wondering if anyone has run into this problem or knows a solution for it. I purchased the KPC-3 PLUS for field use, and now Kantronics is telling me I need an outside antenna to use it with my handheld transceiver. Here's the problem:

I'm connecting the KPC-3 PLUS to a handheld Yaesu FT50R transceiver. There is a HUGE amount of static showing up on the Yaesu on 145.010mhz whenever I turn on the KPC. I don't have to have any cables attached and the Yaesu can be 30 feet away in the same room and it still says the channel is active when I turn on the KPC. Does it sound like the KPC is defective or is this normal behavior? It's sort of a bummer since the major packet freq this way is 145.010. Thanks to anyone that can help!

(If you could please send email that would be great!)

Source record: 178594

Hi Clark and all,

I had a similar problem with an ts-820s several years ago. I cured the display problem by removing the display driver board and carefully resoldering EACH and EVERY connection. Actually I think it took about 45 minutes or so. I used a small tip soldering iron and added a very small amount of fine rosen core solder to each joint. Inspect your work under a magnifier, as it is easy to make solder bridges.

Cleaned the board -- re-installed it -- and it never went crazy again.

Good luck and 73,
Paul K0PW

309. Suggestion on dead TS-940...what to do with it?

Date: 1997-04-04 00:00:00 UTC
From: John Strupat <john.strupat@sympatico.ca>
Message-ID: <3345C4B9.751E@sympatico.ca>
Source record: 178595

I am looking at buying a stone dead Kenwood TS-940 about 1988-89 vintage. I haven't seen it personally and due to the distance involved, would appreciate any suggestions on what to look for to try to evaluate it's condition on a trip this weekend.

The rig is stone dead and has had the AVR board removed for an attempted re-work/repair.

I realise that the 940 is very complex and diagnosing it will be impossible on the spot unless there is visible damage from overheating or heavy handed repairs!

Any clues to help me evaluate this thing and some idea of a reasonable offer on it would be gratly appreciated.

I'd rather not take on a lifetime repair project...

If you baught the radio at a Ham Radio Store they would have said :
"You baught it now you are stuck with it." Or " We at #$%^^^^ OUTLET
do not sell radios for evaluation. So send your radio back to ADI and
good luck".

Have you heard that the FCC has made available 350 megahertz of spectrum
(READ BELOW).

I'm looking for some tech weenies experienced in building homebrew
equipment.
I want to sit down and start developing some wireless LAN equipment
utilizing this newly liberated airspace. I very experienced in the
LAN/WAN technology but I lacking in hands on, hardware design,
experience.

Think of it! A wireless LAN device, cheap to manufacture, that would be
inexpensive enough for every household in America to purchase. Forget
these money grubbing telcos. If we can supply the technology cheap
enough we can build our own wireless Internet and minimize the
dependency on the telcos.

Any takers? Any dreamers? Any entrepreneurs willing to take a chance?

Drop me a line if interested!

-Andy

*****

COMMISSION PROPOSES TO MAKE SPECTRUM AVAILABLE FOR USE
BY NEW UNLICENSED EQUIPMENT;
NII/SUPERNet Devices Would Facilitate Interconnection to NII
(ET Docket No. 96-102)

The Commission has adopted a Notice of Proposed Rule Making to make
available 350 megahertz of spectrum at 5.15 - 5.35 GHz and 5.725 - 5.875
GHz for use by a new category of unlicensed equipment called
NII/SUPERNet devices. The Commission stated the proposed rules would
foster the development of a broad range of new devices, stimulate the
growth of new industries, and promote the ability of U.S. manufacturers
to compete globally by enabling them to develop unlicensed digital
products for the world market.

NII/SUPERNet devices would provide short-range, high-speed wireless
digital information transfer and could support the creation of new
wireless local area networks (LANs) as well as facilitate access to the
National Information Infrastructure without the expense of wiring.
These devices may further the universal service goals of the
Telecommunications Act by offering classrooms, libraries, health care
providers, and other users inexpensive networking alternatives which may

access advanced telecommunications services.

Of course I may be missing something here too... I thought NOVICES could
transmit on HF bands. I personally see nothing wrong with someone asking
a question, no matter how simple someone else sees it. 73's

Hi--Have been thinking about my youth and my 1st ham station. The rcvr was an old HeathKit AR-3. The year was 1957 - Oh how time flys. Well I want to redo that old station of KN6ZLY so I must find the AR-3 HiHi. Any condition is ok, doesn't even need to have a case. What do you have?

Thanks Bob

: MFJ the only manufacturer of keyers these days? There used to be
: a keyer chip (Curtis?) available as a kit - is it passe also? Maybe
: keyers are always included in new equipment now ... hmm, new
: equipment ... there's a thought. What are you doing for a keyer?
: Go ahead, I have my armor on ... let me have it!

The Curtis chip is still around, I think, but perhaps not the
latest and greatest (IMHO).

I would give a serious look at the CMOS SuperKeyer III (I hope
I got it right, typing from memory). This is really just a
single-chip microcomputer that is all programmed up to be
a very versatile keyer. It was written up in QST a couple
of years ago (?) and has been improved since then. I have seen
ads for it in the back of QST. It may come assembled or in
kit form.

A recent QST reveals...
It was written up in August 95.
A "partial kit" is available from Idiom Press, Box 1025,
Geyersville, CA 95441, for $58.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-04 00:00:00 UTC
From: n8nn@aol.com
Message-ID: <19970404003400.TAA28727@ladder01.news.aol.com>
Source record: 178700

I use the the Hamstick 80, 40 and 20 meter verticals mounted on the trunk of my car. The quick disconnects make it very easy to install and remove. My FT-900AT automatic antenna tuner easily matches the entire 40 and 20 meter bands and about +/- 100 Khz of 80 meters. There is about 21 feet of coax between the antenna and the rig (coiled up in the trunk).

I easily work into Europe on 40 CW in the evening from the East coast in the evening, and usually work anyone I hear on CW on 40.

80 meter phone is very reliable in the morning, but difficult at night because of the noise and the band is too crowded. 20 meter CW and SSB is reliable when the band is open, but difficult in poor band conditions.

I carefully resonated the whips using an MFJ antenna analyzer to my favorite operating frequencies. The automatic antenna tuner does the rest.

I highly recommend the Hamsticks for a "cheap" mobile antenna solution.

Of course, a Bug Catcher or Screwdriver will both do a better job.

>snip
>==========

If you have trees, simple coax-fed wire dipoles make excellent antennas (and the neighbors don't even see them like they would a tower and Yagi).

Sometimes it is possible to get two-band coverage without any kind of tuner:

I have a wire dipole cut to 80 M cw, which also functions as a "T" on 160 when I tie both coax conductors together at its base and feed it against ground.

I also have a wire dipole cut to 40 M, which functions well on 15 m as well (simple dipoles work well at 3x the fundamental frequency).

The only expensive part is the coax - the wire is pretty cheap.

Without trees, your best bet is to put up a simple vertical. If you can manage about 33 feet high, you could use it on 40 and (probably) 15 also, again without any tuner.

A tuner will give you freedom to use a simple long wire on several bands, and might actually be the cheapest route to success - a ground rod and a few dollars worth of wire plus the tuner would go a long way.

I have the ear piece mike and like it very much. The receive audio is
very good, and I have received good comments on the transmit audio.
There is a tiny button on the mike itself for PTT. The plug does fit
snugly into the FT-50.

Hello to all...
I have a FT900-without the AT option, which is a waste of money in
my
opinion-and think that it's the greatest thing since sliced bread.
It
has an effective noise blanker, which is very important in a mobile
environment, is easy to tune and operate while mobile, and the
seperate
control head is a very handy feature in a small car like my Escort.
I
use a 20 meter hamstick and an external MFJ tuner while mobile, and
on
a recent trip was able to work Virginia from Interior Alaska , as
well
as Wisconsin, which for some reason is hard to work from up here.
Now for the gotchas-the CW filtering is a bit wide, without the
optional CW filters, it's about 700 hz even on narrow CW, but the
notch
filter and IF shift can help you out there. As I mentioned earlier,
the
auto tuner is a waste of money-your $260 or so buys you a tuner that
matches a big 3:1 SWR, which wouldn't even cover the entire band
with a
hamstick, and the remote head connector has to be screwed into the
radio every time you remote it. Not perfect, but a nice rig for the
price. My FT900 is my only HF rig, and works as a fine base rig
also.

Hello all, and thanks for reading this...
I have a couple of the old GE "Porta-Mobile"
lunchbox 49mhz
rigs, and I would like to recrystal them to work
on 6 meters, in
particular 52.525 simplex, for mobile use. Does
anyone know the
formula for crystaling these radios-from what I've
seen by
pulling the old crystals, the schemes are
different for TX and
RX. Also has anyone actually done this, and what
kind of
surprises await the unwary?

For sale: ICOM CR-282 High-Stability Crystal Unit
** Brand-new in box ** $70.00 ** includes shipping.
(HRO sells it for $124.95).

Works with many ICOM radios including 775DSP, 765,
737, 736 and others.

Contains a temperature-compensating oven heater and
crystal unit for improved frequency stability. Makes
your ICOM frequency stability rock-solid! Easy to install.

Send email to sandy@sandy.com
Thanks for the reading. 73.

> Harris VE6DK/W6

Its a usual thing when the 227R gets old....Check the 8V DC line to the synthsizer..
The relay that switches 8V could use cleaning..also the OFFSET switch on the
front panel will cause it...clean that switch as well....be sure to use a SAFE cleaner that does
not leave a residue and doesnt harm plastics....check the 8V regulator that is mounted to the
upper chassis on the right side of the radio....if the solder joints come loose on the bottom
of the PC board, it will cause that also...

Mine is fine except for the damn digit counter....it ALWAYS goes up in freq...and I think a optoisolator is out...so it wont go down in freq....real pain!

> They will clear channels 52-59 and either 2-6 or 47-51 of stations,
> and auction these too.

The final report was that HDTV would use 7-51....

> At least on UHF, stations will be assigned a minimum ERP power of 50KW
> and a maximum of 1000KW.

I saw in the R&O allocation at a local SBE meeting that some VHFs would only use 8KW ERP .....compared to their current 216KW video and 100Kw audio! and I thought I saw lower levels on UHF than 50 KW...

Hello, My name is Steve Zumbrun, W0SZ. I'm a ham radio operator out in Iowa. I think there is a market for your equipment and tubes. I would recommend that you contact your local radio club or local ham radio operator and see if he or they wouldn't make you an offer. Frequently there are amateur swap meets and I'm sure there are hams that would like to get their hands on the stuff. You also pobably should try the news group rec.radio.amateur.boatanchors. Best of luck. Steve

I'm trying to get rid of a setup for pirate radio that I bought but was unable to use because I totaled my car. The transmitter is a Heathkit Cheyenne MT-1 shortwave transmitter. It comes with the Heathkit HP-13 power supply, and I'll even throw in the microphone and jacks I was going to replace the old four prong jack with. I'm willing to sell all items (transmitter, power supply, microphone, and jacks) for $100, which I think is a pretty fair price. I'm willing to negotiate if you think it's too high. Also available is a Radio Shack 40 meter antenna and the matching trunk mount for $60, and a 12 volt battery, battery charger, and pair of battery clamp connectors for $40.

Ah...Kenwood HF. As I recall (not a historian)...

TS900 275 watts, 80 thru 10, no warcs, silver color, external vfo
R599D/T599D twins 6146B (S2001)finals. Competes with Drake C Line.
TS520 80 thru 10, no WARC, 6146B (S2001) no processor, 12VDC ready
TS520S 160 thru 10. heater switch, processor, adds a spinner knob.
TS520SE took off the fan, economy model of TS520S
TS820 if shift, notch, slightly better RX than 520. 12VDC capable.
TS820S adds the integrated blue digital freq reqdout still no WARC
TS120S first all solid state rig (1979). 80 thru 10, no WARC, no proc
TS180S dream rig -- top of the line. PS30/VFO180/AT180/MC60. This
offered an electronic DFC VFO, 2 memories, etc. $1200 for just
the rig back in 1979.
TS530 Stripped down TS830...integrated power supply. 1980 or 1981
TS830 Solid state equivalent to 180S (with WARC capability). The best
kenwood RX ever made. External VFO req'd for split, 6146B
(S2001) tube finals. 1981
TS130S same as TS120, but adds warc bands, fan, and speech processor.
still only 1 VFO and no memories. VFO180/AT130/SP30/PS30.
TS130SE same as TS120/TS130 but made the fan optional. "economy" model
of TS130S.
TS830S slight circuitry improvements
TS530S slight circuitry improvements
TS530SP adds the notch filter to the TS530S
TS600 Quad bander (solid state, 10W output on 40/15/10/6 meters)
TS930S / AT first general coverage RX. Internal power supply, solid
state. 100W, Early models plagued with problems. 28VDC final.
first Kenwood HF rig that will do FM. Dual VFO's. etc.
TS430S first general coverage mobile transceiver. FM optional with
FM board. No internal ATU capability. Relay problems in some
early models.
TS940S / AT Flagship radio for about 10 years. 100W hf, slope tuning,
all solid state, internal tuner can be added.
TS440S/ AT - most popular radio Kenwood has made.
The rest are relatively modern -- check back issues of QST for details.
TS140S
TS450S/ TS690
TS50
TS850

Hi,

This radio sounds intriguing. ...the new RS/ADI one, I mean. I've been thinking about one of these days replacing my FT-51, and I really liked the FT-50 a lot...well...it sounded like a pretty good deal! And really, I think the FT-530 is a ibit better than the '51...but I digress. It sounds like the new ADI-600 has some nice features, especially separate volume/squelch knobs (real knobs?). Does anyone actually have one of these radios? I'm wondering how easy it might be for a blind person to use? For example...

* Do the buttons beep when you press them? (Even better, do the buttons beep with different pitches?)
* Is there a readily identifiable way (audibly) to tell things like high or low power, for instance? Keyboard lock status? Etc.?

* What is on the setup menu?

* Does the setup menu beep at the beginning or ending entry? (This would be useful...unfortunately, none of my Yaesus did this...but they did have a different beep for each key, and beeped higher for high power than for low power, and some other useful things...like you could tell if the keyboard was locking or unlocking, direction of scan, what band you were switching to, etc. etc. by the tones...)

* Is the system for directly entering frequency or memory channels intuitive?

Any and all details would be very much appreciated.

Good luck with the repair. My FT-747 is now over 7 years old and
works perfectly. The radio will receive signals well below the AM
broadcast band. Without the modification, the radio will *transmit*
in Amateur Bands only, which is kind of a good thing.

I modified mine *when* I *had* an Army Mars license, but now I have
restored the transmit limitation. It will keep me from transmitting
out of band by accident.

macmike@netnitco.NET (Mike Hughes) wrote:
>I saw recently where the FCC has given each TV station a new Frequency
>for HDTV. Does anyone know what frequencies they will be power rating and other
>particulars.

All DTV will be in existing TV frequencies. Each station will be
assigned a second channel somewhere between channel 2 and channel 59.
This second channel will (in most cases) be used for DTV operation.

In the year 2006 (subject to review) the current analog system will be
shut down. At that time, channels 60-69 will be vacant. Four of
these channels (probably 60-63) will be given to public-safety
operations, and the rest auctioned. And, the FCC will use the
now-vacated NTSC assignments to "compact" the spectrum assigned to TV.
They will clear channels 52-59 and either 2-6 or 47-51 of stations,
and auction these too.

At least on UHF, stations will be assigned a minimum ERP power of 50KW
and a maximum of 1000KW.

>> the voltage and the current go down.
>>
>> If you have any hint, let me know.

If this additional current drain is from running an RF transmitter at
high power, the supply could be folding up because of local RF energy.

This can happen when the radio is sitting right next to or on top of
the power supply, and/or if there is no antenna or a very poor antenna
connection.

If it is a radio, then check the standing wave to make sure your
antenna is OK. If it isn't going out to the antenna, it is radiating
locally around the radio and can kill the supply.

****

As a guess I would say perhaps the metal support is causing the
problem. Loops of this nature cannot tolerate nearby objects of
metal. Try a temporary wooden support and see what happesn.

I would appreciate your comments if you try this scheme.

Good Luck

Dan Walker (SciCon@ix.netcom.com) wrote:
: I've had a 210x for a number of years. It works great on AC
: power but not very good on battery. The CW transmit switch is
: a pain to use.

Agreed.. my 210x works well off an external 13.8v power supply, but on a slightly low car battery the voltage drop has given me several complaints on SSB. If you use it for mobile SSB, then certainly keep the engine going.

FWIW, my Icom 735 will put a full hundred watts into a 40m Hustler coil, but my Atlas 210x will plummet to QRP levels with the same antenna, unless I use a small MFJ tuner inline.

: Still, I've almost got my WAS using this radio on CW. The reciever
: is very good.

My 210x does not have the sidetone option, but using it for CW I've learned to send decent code without a sidetone. A noisy key like a surplus J-37 (black phenolic base and stamped steel arm) works fairly well: a dit's a "click" and a dah's a "clunk!

Subject: General coverage mod for YAESU FT-747GX
CEO file contents:

General Coverage Mod for YAESU FT-747GX

---
1) Remove top cover.
2) On backside of display unit, there is a brown jumper
wire near the large ribbon cable.
3) Cut the brown jumper wire.
4) Turn the radio on and set the frequency to 12,345.6 KHz,
then turn the radio off, then on again.
5) This enables the general coverage mode and a GEN display
will come on and stay on at the top of the LCD display.
6) Reassemble the unit. It will now transmit everywhere it
receives, however, Yaesu recommmends that it only transmit
between 1.8 - 30 MHz.
Disclaimer: I'm passing this on from someone who owns one of these
and
has done the mod. I have not done or tested this mod. You do it

at your own risk.

>I'm looking for info on 2 Meter repeaters. Whats the best setup, radio,
>antenna, phone patch and etc. Please help with any info of where I can
>find the info.

Until you KNOW you can get co-ordination, don't bother!

I have built all my repeaters from Motorola radios.

The latest (W1DVC) is from a Motorola MITREK.

I prefer my own controller, but the S-Com line is good.

I found that that the Jap junk is NOT suitable for repeater service
even when they call it a "repeater" antenna, there is NO substitute
for Phelps-Dodge, Cellwave, Station Master etc for antennas.

Yoour biggest headache may be cavities. Again, having tried the
"usual" providers, there is NO substitute for Sinclair cavities.

Height is everything, be REAL sure about following Gary Cofman's rules
for lightning protection.

Good Luck!

NOT so anyone can put up a repeater. But you are obliged to change
frequency if you conflict with a co-ordinated repeater.

368. MODS FOR KENWOOD TS570 ?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-05 00:00:00 UTC
From: Gary - KJ6Q <tech@thereporter.com>
Message-ID: <5i4932$9kn@lacy.zippo.com>
Source record: 178623

I've had my 570 for 6 months or so now, and am interested in increasing output power a bit to better drive my linear amps, also interested in the extended coverage transmit mod, if anyone has the info...

thanks!

Suggest you also check out Ericsson-GE new web site at www.ericsson.com
(?)
There is a complete index of GE radio manuals and tech publications that
you can download. I also strongly suggest checking out the site of Niles
Radio in
Flagstaff, Arizona. They sell a RIB bos that makes it possible to program
the
Phoenix with a PC. Otherwise the radio must be programmed with GE's
TQ3310
programmer and software which is rare and expensive. Hope this helps.

I agree. I like Radio Shacks return policy.I have only needed to use it
once but I like knowing it is there if I need it. The majority of Ham
stores have NO return policy and if they do You pay a 15% return fee.

Hello out there:

I'm trying to figure out the lineage and features
of the Kenwood HF products. The question is
"Which came when, and what did it do? (and
what did/do you think of it?)".

For example, (with apologies to all Kenwood
owners; this is from memory!) the TS-520
came out in the late '70's, "old" ham bands
only (no WARC coverage), put out about 100
watts with tube finals. Outboard VFO
available for split frequency operation.

The TS-520S(?) was pretty much the same,
but had the digital readout (?).

The TS-820 came out in the late '70's shortly
after the 520. "Better" receiver, "old" ham
bands only (no WARC coverage), about 100
watts out from tubes (pair 6146?). Digital
display, outboard VFO available for split
frequency operation.

TS-830, then TS-850. (Here my rusty and
bent stack pointer fails!) Coverage, features,
and options unknown.

What followed? How did the features and
performance stack up between the different
models? What were the features of each,
and which model followed which?

Please mix your opinions in with whatever
facts you have, as your opinions are very
interesting and valuable to me.

Yes, you have guessed it; I want to finally
upgrade the operation here, and I'd really like
your comments and opinions! Especially the
opinions!

Thanks in advance for reading this, and for
your time.

Hi Andrew,

Given the frequency and application, you may wish to see what
modulation modes are allowed. My hunch is that it will be spread
spectrum. Not a simple task to build these systems much less the RF
plumbing at 5 Gigs.

Hi,
I'm trying to breath some new life into an old Icom 720A transceiver by replacing the faulty rotary relay in the band pass filter unit.
Working on an article written by WB0GAZ in 1993 I'm hoping to replace the relay with indivdual band switching relays, of which some 14 are required (to switch filter input and output).
Space constraints dictate these relays should be as small as possible, which then limits the current rating of the relay.
The question is, am I right in assuming the current rating of the realy can be calculated (using formula P=I^2 R, P=100W, R=50ohms) to be 1.4A, and therefore a relay rated at 2A AC will work, or am I missing something?
Put the question another way, what relay current rating should I use to handle 100W?

Thanks

Mark

My father (W2KX) died 7 years ago. Alot of old ham gear remains. The best of the newer transmitters, receivers and transceivers sold shortly after his death. What remains is all of the old stuff. We also have lots, let me repeat, lots and lots of radio tubes.
Is there a market for this stuff or should it be discarded. After seven years we don't want it any more. Besides, my mother wants to move and we have to clean out the basement.

any suggestions would be appreciated
thanks
daughter of W2KX

Kenwood was first marketed under the name Trio. They made tube type
equiptment. One of their products was a 550 kcs-30 mcs receiver that
resembled the S38. However it had a power supply, an RF stage and two IF
stages.
Later the name Trio-Kenwood was used. Peter Christensen VE6LP

399. Kenwood repair

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-05 00:00:00 UTC
From: louis@mail.snider.net
Message-ID: <5i6ne9$9gl@usenet81.supernews.com>
Source record: 178654

A friend of mine has a Kenwood TS450 that needs repair. Anybody know where a good place to have it fixed may be? The last repair I had done to Kenwood was by Kenwood in Ca several years ago.

Thanks for any input
louis@mail.snider.net

400. Help in Pricing Estate Items

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-05 00:00:00 UTC
From: skhowell@geocities.com
Message-ID: <3346e161.655593677@nntp.ix.netcom.com>
Source record: 178655

My Dad recently passed away. He had been a ham for the last 7 years. I'm needing some help in getting a valuation on his equipment so that I can pay my mother. (Rather than her sending it to a dealer, I told her I'd like to pay her for it myself and keep it as a set ... thought I'd go ahead and get a technician plus ticket)

The items included:

-Yaesu FT-707 (HF SSB transceiver) with docs
-Belmoor 60388 (precision regulated 13.8v 20A low ripple power supply) w/out docs
-Kantronics KAM (all mode TNC, firmware version 5.0) with docs and DOS software
-MFJ Versa Tuner II model MFJ-941D (antenna tuner/selector swr meter) with docs
-MFJ Econo Keyer II w/out docs
-Vibroplex no. 04703 (keyer - brass racer?) w/out docs
-MFJ-260 (300 watts Dry Dummy Load)
-Radio Shack HTX-202 (2M VHF-FM handi-talki) w/out docs
-Radio Shack Pro-2025 (12v 16 channel UHF/VHF scanner) with docs
-Mobile type scanner antenna (multi-loaded whip)
-HF antenna of unknown manufacture (vertical pole, apx. 22 feet overall, 3 loads in middle section, 6 - 14" radials about 3/4's up, 3- 7" radials near top, with top load and 30" whip on top)
-Small wire & insulator dipole (overall length aprox. 16')

If anyone can place a rough package price on the bundle for me, I'd appreciate it. Information on individual item pricing would also be valuable.

Thanks

Nick Howell

You can buy an FM broadcast band TX kit from Ramsey for $200. It is PLL synthesized and full stereo. The power is low but if you use an FM broadcast receiving yagi antenna, you should get a pretty good signal in one direction. Also, the higher the antenna is, the further the station will transmitt.

Ahhh thanks but that was NOT his question; he wanted to know how to tell a VHF MICOR from a UHF MICOR without having to look inside....he got his answer without having anyone give him a lesson in the electromagnetic spectum and its acronyms

Yes, they DO....but their name is now called CELWAVE....look for their
web page (I dont recall their URL..) and they are still in Marlboro, NJ.

>

If its really 160 Mhz, forget it!!! Not worth the trouble...
>
> How can I make a new wiring harness for it and do I have to change the
> size and or spacing of the loops?

You would have to change EVERYTHING...spacing of the dipoles, length of
each dipole, and length of the coax harness in every section...
>
> I don't even know what impeadance the loops are.

50 ohms nominal....this antenna is same theory as the one in the ARRL
Handbook and FM/Rptr handbook

> Here it is: I just got a Phelps Dodge Commercial antenna that I believe
> is tuned for the 160MHz band.

Do the standard 468/length = freq....you'll find the folded commercial ones end up showing to be 10 Mhz higher using this formula than they actually are...
so if the tip to tip length of one dipole shows it to be say 170Mhz by the above formula, chances are it is 160 Mhz...
>
> Phelps Dodge does not make antennas anymore so I can't get any info from
> them.

Not so...Phelps Dodge was spun off and CHANGED their NAME to Celwave..
they still make that antenna...

> The antenna is approx 20 feet tall and has 4 loops attached to it they
> alternate sides. The wiring harness is inside the poleas opposed to
> being outside where I can see it.

DB makes a similar model called the DB264 (harness is inside..the DB224 has it outside)

> I want to convert this antenna to the 2 meter band.

GOOD LUCK!!!

> How can I make a new wiring harness for it and do I have to change the
> size and or spacing of the loops?

BEst to find one cut for 150-160 OR 140-150 Mhz....it isnt worth it trying to modify it..
sell it to someone who needs an antenna in the 160 Mhz band (like the Weather Svc or railroad...FBI, Secret Svc, etc)
>
> I don't even know what impeadance the loops are.

50 ohms nominal......

> How do I find out and how do I make the harness? 1/4 wave lengths? etc.

The harness is likely 70ohm coax...each run is a multiple 1/2wave length to transform the 50 ohm dipole feed to 100ohms....then they combine to make 50ohms again...then this is repeated once more for the main antenna input....
2 dipoles at 50ohm...both go to 100 ohm thru the coax xfmr...paralleled together, they form a 50ohm match again....then the two PAIRS of dipoles are tied this way to again form 50 ohms for the main feed...
>

> Any help would be greatly appreciated.
>
> Thanks,
>
> Scott Sidener N0WFL sidener@umr.edu

Contact CELWAVE for more info....Dont have their web URL handy but I think they have a web page..

I am planning to buy this radio. It sells for less than $400. Is it
capble of 9600 baud operation with packet?

If it needs to be modified for such operation, has anyone done that
iwth success and is there info avalable anywhere?

thanks you for any reply.

No one can answer that question from a distance. There is good interest
in *SOME* old stuff, but much is just plain junk. You should seek a local
ham radio club for assistance in determining exactly what you have.

Source record: 178465

I have a Kenwood R-1000 receiver for sale. It is not a stock unit. There were a
number of mods done to it by the now defunct Radio West. It has switchable
AGC, 12khz AM filter, 6khz AM filter, 2.7khz SSB filter and a Collins 1.9khz
mechanical filter. Also included is the DC power option and a weighted
spinner type vfo knob (Kenwood KB-1) and the original shipping box. I just
had some work done on it by Kenwood and they said that it met all specs. I am
asking $425.00 for the above which includes shipping.

Lakeview Company (Hamsticks) was at Timonium hamfest this
weekend. They told me a 40 meter antenna on a small trunk
lid would not work very well.

For normal size lids ther should be no problem. No problem at
20 meters and up. They recommend bonding any trunk lid to the
carr body with coax braid.

I have used Hustler antennas on 40, 20, 17 with a large 4-piece
mag mount, both on roof and on trunk lid (no bonding). Worked
great on all bands.

Les... I've sold and installed lots of Larsen UHF and 800 antennas.
When I have to remove them, I just use a thin, flexible putty knife and
work my way in from a corner. It doesn't usually take more than
1/2-inch or so before a little pressure will pop the antenna (or inside
coupler) off the glass cleanly. As for re-installing, get the
re-install kits from Larsen (they're about $5 each). Larsen's in
Vancouver, WA and has a 1-800 number (which escapes me at
5:25am...sorry!). They can point you to a local dealer who can supply
the kit, or probably sell you one directly, and you can ask them about
removals, too. We use mostly Larsen and Maxrad antennas here, except
for very specialized applications, and have been very happy with the
factory support on both brands. Hope this helps.

Want to make MONEY fast?????

A little while back, I was browsing these news groups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $5.00! So I thought, "Yeah, right, this must be a scam!" as most people probably thought. But also like most people I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and address stated in the article. You then place your own name and address in the list at #5, remove the #1 person, and move everyone up a position, and post the article in at least 200 news groups. (There are more than 18,000 of them). No catch, that was it.

So after thinking it over, and talking to a few people first, I thought about trying it. I figured what do I have to lose except 5 stamps, envelopes, sheets of paper and $5.00, right?

Like most of us I was still a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the US. Post Office (1-800-725-2161) and they confirmed that it is indeed legal.

Then I invested the measly $5.00.................

Well GUESS WHAT!!!.. .Within 7 days, I started getting money in the mail! I was shocked! I still figured it to end soon, and didn't give it another thought. But the money just kept coming in. In my first week, I made about $20.00 to $30.00. By the end of the second week I had made a total of just over $ 1,000.00!!! In the third week I had over $5,000.00 and it was still growing. This is now my fourth week and I have made a total of just over $20,000.00 and it's still coming in......

It's certainly worth the $5.00 and 5 stamps. I spent more than that in one week on the lottery!!!

Let me tell you how this works and most importantly, why it works... also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each piece of paper, "PLEASE PUT ME ON YOUR MAILING LIST." Now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of paper so the bill will not be seen through the envelopes to prevent thievery (THIS STEP

IS VERY IMPORTANT!!!). Next, place one paper in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase and a $1.00 bill inside. What you are doing is creating a service by this. THIS IS PERFECTLY LEGAL!

Mail the 5 envelopes to the following addresses:

1) I. Guest
1800 A Hillcrest Rd.
Columbia Mo, 65203
USA

2) B. Gelsleichter
RR2 Box 272
Tunkhannock, PA 18657
USA

3) J. Hurless
3649 Yorktown Way
Boise, ID 83706
USA

4) C. Lanning
101-1537 Burnaby St.
Vancouver, BC V6G 1X1
CANADA

5) A. Cole
2580 W. State Road 28
Tipton, IN 46072-9787
USA

STEP 2: NOW take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR NAME as #5 on the bottom of the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as posible. Now, post you amended article to at least 250 news groups. All you need is 250, but remember the more you post, the more money you make! Don't know HOW to post in the news groups? Well do exactly the following:

FOR NETSCAPE USERS,

1) Click on any new group, like normal. Then click on "To:News", which is in the top left corner of the news group page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye!!!!

3) Now go to the message part of the box a retype this letter exactly as it is here, with the exception of your few changes. (remember to

add your name to #5 and move the rest up.)

4)When you're done typing in the WHOLE letter, click on "FILE" above the send button. Then, "SAVE AS..." DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE IT!!! (so you don't have to retype this 250 times!)

5) Now that you have saved the letter, go ahead and send your first copy! (click the "SEND" button in the top left corner)

6) This is where you post all 250! OK, go to ANY news group article and click the "TO:NEWS" button again. Type in your flashy subject in the "SUBJECT BOX", then to the the message and place your cursor here. Now click on "ATTACHMENT" which is right below the 'SUBJECT BOX". Click on attach file then find your letter wherever you saved it. Click once on your file then click "OPEN" then click "OK". If you did this right, you should see your filename in the "ATTACHMENT BOX" and it will be shaded.

NOW POST AWAY!!!

IF YOU'RE USING INTERNET EXPLORER:

It's just as easy, holding down the left mouse button, highlight this entire article, then press the "CTRL" key and "C" key at the same time to copy this article. Then print the article for your records to have the names of those you will be sending $1.00 to.

NEXT

Go to the news groups and press "POST AN ARTICLE" type in your flashy subject and click the large window below. Press "CTRL" and "V" and the article will appear in the message window. ***BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5 NAMES!!*** Now re-highlight the article and re-copy it so you have the changes...then all you have to do for each news group is "CTRL"and "V" and press "POST". It's that easy!!

THAT'S IT! All you have to do is jump to different news groups and ost away, after you get the hang of it, it will take about 30 seconds for each news group! ***REMEMBER, THE MORE NEWS GROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 250***

421. Wanted: Alignment info for 75/S3 Collins Receiver

I have acquired a Knight RF Z-Bridge which I have a few questions about.
1) How do you use it?
2) Is it a usefull tool?

A brief description:
It has a dial marked from 20 to 400 ohms, and there are 3 points which I imagine are sockets for either signal sampling or injection. They are marked "signal adjust" "ground" and "null" There are also 2 so-239 connectors for the antenna.

Any and all comments are appreciated, especially if they are helpful!

Fair Radio sells exactly what you need for $49.95 + shipping. They are Elpac 24 VDC, 10 amp regulated
supplies, new and in a sealed bag. They need to be wired for the AC and a few jumpers, instructions are
included.
They are GREAT supplies. I have 2 to power my mil surplus VRC-12 equipment. They are not pretty (no
panel meters or even nice cabinet) but they work very well. Best 50 bucks I ever spent at Fair Radio.

Hi All. I have a Drake TR4X and have heard about the DX
Engineering speech processor. Was this an internal mod or external
add-on? Where do they insert in the circuit and why are
these considered so great with Drake fans? Are there any
still around, perhaps at Dayton? Also, what kind of mike
works good with the TR4X? I want to try a D-104 because it's high
impedance and would match good with the tube input of the rig.
Thanks for your comments.

Hi Bill,
The TS930 is a fine rig. There were many problems with early units.
Most were corrected with a major re-design above S/N 3,100,000. The
rig does have problems with plated-through holes on double-sided PC
boards common to all Kenwood rigs of that era. This affects primarily
the logic and final boards in the 930. Also, the low-beta MRF422
finals are no longer made, making final replacement a more expensive
proposition as time goes on.(these were also used in the 940) The rig
puts out a clean 120 watt+ signal sufficient to drive almost any amp
to the legal limit. If you're interested in computer interfacing, I
would recommend a newer rig. The 930 is selling in the $750-900 range
at the moment which is a lot of bang for the buck. For a couple
hundred more you could shop in TS940,TS850 territory. They are both
also fine rigs. The 940 is basically an updated 930 with a few more
bells and whistles and the 850 requires a separate power supply.
Hope that helps, I'm sure there are many more opinions out there.
Best 73 Greg K3EWZ

>cmthomp1@facstaff.wisc.edu

General information ...

The digital display board on this radio is prone to this
type of problem.

This was Kenwood's first venture into double-sided PC boards
with plated thru holes ... and some of the "plated thru"
wasn't really plated thru very reliably!

The fix is to re-flow solder on all connections on both
sides of the board - not just on the connectors ...
sometimes that will bring the display back operational!

Good luck, and very 73,

> and most importantly, what did/do you think
> of it?

Yes, two of the best, both of which support Windows, are XPWin 1.1.7 and Express 3.6. XPWin supports most popular modems while Express supports only the Hal units. A demo version of XPWin is available at:

http://www.goodnet.com/~gjohnson

I don't have a current site for Express 3.6 but, since it's a commercial package, I don't believe there is a demo available in any case.

Both work well, but have somewhat different approaches and interfaces. Express has some features usable in Clover that are unavailable in XPWin.

Source record: 178553

My 2 cents:

The 520 came out first, for 80 - 10 meters ham bands only plus WWV at 10.000 MHz, no WARC bands, tube finals, 200 watts PEP input on ssb, 160 watts on cw. The standard filter for ssb was 2.4 kHz
wide, with an option for a 500 Hz cw filter.

The 520S was the same plus 160 meter operation was added.

The 520SE is the -S without the finals "heater" switch and the dc converter terminals. Advertised as "an economical new version of the 520S".

None had onboard digital readout, but an accessory DG-5 digital readout was available to give you the frequency down to .1 kHz. Other options were the VFO-520 and 520S External VFO for split
frequency operation, the AT-200 Antenna Tuner, and the SP-520 External Speaker. This is a real workhorse of a rig, with I'm sure hundreds in operation yet daily. My 520S is.

Source record: 178557

I have an Icom IC-740 all mode HF transceiver for sale. It includes the
following installed options:
PS-35 internal power supply (rig operates from either DC or AC)
EX-241 Marker unit
EX-242 FM unit
EX-243 electronic keyer
FL-44 2.4khz SSB filter
FL-45 .500khz CW filter (9mhz)
FL-52 .500khz CW filter (455khz)
Hand mic, accessory plug. manual, service manual, reviews, etc.
It has a few minor scratches on the case.
This rig still has a great receiver. Check out the following specs from
QST;
minimum signal -133, blocking DR 130db, 2 tone 3rd order IMD DR 95db,
3rd order intercept +9.5db. All of the above are without the preamp on.
I am asking $725.00 for the above which includes shipping.

> assaf@idt.net
Here's what I did.
Take a small piece of 2x4 wood. Route a cavity the size of the battery
laying on it's face. Take a small piece of circuit board material
and cut the foil trace into two sections with an Xacto knife. solder
two small contacts (one to each isolated part of the circuit board)
distance apart to match the contact width on the battery. I used
fingers
cut from emi gasket material, but any springy metal will do.
Since I couldn't find a socket to fit the plug on the wall charger, I
used a 12V wall charger from the junk box. Put a light bulb in series
and a diode to prevent discharge when it's unplugged. Size the light
bulb to match the charging current you want.
Glue the board material in the right spot in the cavity in the wood.

Now you just lay the battery down in the cavity. Light tells you that
you've made contact. Works great for the AA pack too.
Price-Costco sells a set of 4 AA cells rated 1100 MAH for about $15.

Joe, you forgot a few, otherwise your list is very complete:

TS-511 (possibly their first HF rig on the US market, ca. 1970)
T-599 and R-599 (predecessors to the "D" models)
R-820 (high-end HF receiver)
TS-120V (10 Watts, otherwise same as TS-120S)
TS-130V (10 Watts, otherwise same as TS-130S)
TS-660S (15/12/10/6m quad-bander)
TS-680S (not sure what features/bands this one offered)
TS-950S (top o' the line super-rig)
TS-950SDX (additional filtering, optional DSP)
R-1000 (HF SWL receiver)
R-2000 (HF SWL receiver)
R-5000 (HF receiver, based on TS-440S transceiver)
RZ-1 (mobile HF SWL receiver for in-dash mounting, DIN chassis size)

Also...
On the TS-520S, the DS-1A DC convertor became an option.
TS-450S and TS-850S had optional DSP unit (model DSP-100)
TS-570 and TS-870 models have DSP built-in from factory

>Ahh you mean 7 and 51 dont you????? NO HDTV will be on 2-6 or 51 and up...

No, I mean 2-59. The FCC seems to have changed their mind last week
about low-band VHF, though that isn't final. They may still delete
2-6. As for 52-59, there will need to be temporary assignments there
as there aren't enough other UHF channels to accomodate everyone.
Once NTSC shuts down (theoretically in 2006) the old NTSC UHF
assignments will become available. Those stations operating DTV in
52-59 (or 47-59 if they decide to keep 2-6) will move to new
assignments in 2-46 or 7-51.

>> At least on UHF, stations will be assigned a minimum ERP power of 50KW
>> and a maximum of 1000KW.
>I saw in the R&O allocation at a local SBE meeting that some VHFs would only use
>8KW ERP ....compared to their current 216KW video and 100Kw audio! and I thought I
>saw lower levels on UHF than 50 KW...

There's also been a last-minute change here. I'm still waiting on the
final text here. Under the original plan, current UHF stations
assigned VHF channels for DTV would have rather low ERPs, 8KW or less.

Also, the new power limits are based on replicating a station's
existing licensed coverage -- not the maximum coverage for the channel
used. So if a UHF station is currently licensed for, say, 600KW ERP,
it would be assigned a DTV power enough to duplicate the 600KW
coverage. (and NOT enough to duplicate what it would have if it used
the 5000KW UHF NTSC limit. NTSC stations are currently protected from
interference as if they were running 5000KW even if they aren't.)

Source record: 178271
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

I have a very nice late model SB1000 HF linear amp for sale. I have
purchased a new amp, and would like to find a good home for this one.
In the event you're not familiar, the SB1000 is the Heath version of the
AL80A. The amp is clean and the tube is bright. Adequate power supply
and delivers 850+ watts on 10-160 meters (actually 1kw on 40-160 CW).
Very linear and clean. I also have a qsk board for it for an extra $75

Specs:

Late model run, very well built by extra class fussy ham
Clean. A very few minor scratches on the top...screw on my watt meter
did it.
Single 3-500 Eimac tube
10-160 operation
Can UPS ship but prefer location within 100 miles of Minneapolis
You pay shipping if you're out of this range...I'll pay to package it
well.
All documentation, including building specs and instructions.

This is really a nice amp for new ham or for cramped quarters. Runs on
either 120 or 240 volts.

Email me if you'd like to talk further.

473. FT-50RD: Cool Radio

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-07 00:00:00 UTC
From: "Adam D. Shapiro" <kb1bcf@contesting.com>
Message-ID: <33498BAA.6CF@contesting.com>
Source record: 178274

Hi All...thanks for reading,

Just purchased a new Yaesu FT-50RD last Thursday. Wow what a radio. I really do like the receiver (also the intermod rejection could be better) but it still beats the heck out of any Icom I've ever owned. I got the 5 watt battery with it (FT-50RDHP) and used it at a flea market on 1-watt setting all Sunday. Lasted from 6:30 A.M. to about 6 P.M on a full charge. By the way, the charger situation is a real pain having to charge the battery without being able to use the radio.

Still, I'm pretty impressed. It also saves me the trouble of carrying around my scanner (which by the way has no better receiver than the Yaesu.) By the way, has anyone actually found an IMPORTANT use for the digital voice recorder?? I'd be curious to hear some practical uses.

My verdict: cool radio. The price is good, and it does what I need it to do. The real test will be the Boston Marathon in a few weeks..we'll see how it holds up. Your comments are welcome.

73,

Adam/KB1BCF

If I remember correctly it's 20 seconds, and can be divided into two 10
second slots.

479. Premier/ADI AT-600 Info!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-07 00:00:00 UTC
From: davros@ccwf.cc.utexas.edu
Message-ID: <5ic40d$kp1@piglet.cc.utexas.edu>
Source record: 178280

Hi folks,

I just got off the phone with a really nice young lady at Premier Communications, the folks who sell the AT-600 dual-band radio, very similar (but way cheaper than!!) to the Radio Shack dual-band HT. I posted on Saturday regarding how friendly this radio is for a blind person to operate. I got a couple of good responses to this question, and Premier was able to find out some more for me as well...actually, my questions caused the young lady I talked to to learn some stuff herself, as she was familiarizing herself with the radio.

(BTW...Yes, it *is* available for $299 at HRO!...the web says so anyway)

Power Settings:

When selecting a power setting, the keyboard beeps are the same for high and low power. However, medium power does have a lower-pitched tone, and the power setting cycle around from high to medium to low...or maybe it's the other way 'round. At any rate, if you know where medium is, you can easily select the power setting you want. Also, memory channels store power setting. The VFO may or may not store the power setting; however, since you can always find one using medium power (the different tone) as a reference, it doesn't really matter.

Setup menu: It appears the only two things on the setup menu that should have to be messed with for more than the first time you set up the radio, are the PL tone settings and the dual watch function (listening to both bands at once). The other stuff can be set once and probably, for the most part, forgotten. ...Oh, and of course the cross-band repeat stuff as well. At any rate, there is a convenient beep at the beginning (or end) of the menu when it cycles around. That means that when you've reached the end (or beginning) of the menu, the radio beeps, so you can always find the menu setting you want if you know how far from the end it is. The FT-51 doesn't do this nifty little trick, and it sure would be handy. I forgot to ask about the keyboard lock function though. Oh, and the radio also remembers what the lastmenu setting you used was...the Yaesu FT-51 does also, and my work-around for no beginning beep is to keep the menu set to battery voltage...but then, I don't have to mess with anything on the menu anyway.

Setting PL tones: This (and the menu, and the band selection which i'll get to in a minute) is something that the person I talked to learned about the radio. When selecting a PL tone, the radio beeps at 110.9. So if you know how far from 110.9 the tone you want is, you can find it. None of the Yaesu HT's I've owned have done this trick either, and it sure would be handy.

Band selection: When you select 2 meters, the radio beeps once. When you select 440, the radio beeps twice. That's good!

Very important stuff here:

The radio has a metal belt clip! This was very important to me, because I really hate!!!! the plastic belt clip on my '51.

I also forgot to ask for an opinion on the speaker, but that wouldn't have done much good. Anyone who owns this radio...how's the audio, in comparison to other HT's? (Receive audio, from the speaker)

Overall...it really sounds like this radio (especially for the price!) is extremely blind user friendly. When I'm ready to replace my current HT, I may well buy one of these.

73,

--Buddy

Hi Walt -- you are the first in 6 months to note this. These were taken
from one of the widely published Ham magazines (name omitted). I would
be most happy to correct them if you can supply the correct information
or tell me where they can be found.

Any help would be appreciated.

> : keyers are always included in new equipment now ... hmm, new
> : equipment ... there's a thought. What are you doing for a keyer?
> : Go ahead, I have my armor on ... let me have it!

I just built a keyer from the '92 ARRL handbook. It uses 4 CMOS IC's and a bunch of discrete parts. It took some time to get it to work (timing problems, etc) but it seems to work pretty well. I etched my own board so its not too complex. You can still buy the pcb from FAR circuits although, $5 or $6 I think. Total cost was $5 out of pocket (good junk box supplies.)

If I were to do over I think I would go for the Curtis chip at $20 and eliminate the tedious work of debugging the timing problems. I had a oscilloscope to help out with this but everyone might not. I spent as much time debugging it as I spent etching a board and building it.

And for about $75 to $100 I could have built the CMOS III as others have mentioned here. It would have given me memories, beacon mode, etc. Many handy things the simple keyers cannot do.

The next problem is to learn how to use the paddle...thats another skill that has to be learned to second nature level...just like learning the code in the first place.....

> 900ft or more.

Go to http://www.ramseyelectronics.com, and you will notice that they
also sell a broadband amplifier, the LPA-1, which is designed for
ham applications but will work with the FM25 as well. Be sure
to read the "Important FCC Information" at the top of the page.
Amplifying the signal of the FM25 is probably illegal.

What sort of antenna are you using? Maybe you should check out their
antenna too.

Go for the Ramsey part 15 radio transmitter. They have it in either AM
or FM. Weve beem using the ramsey FM10 tansmitter for 2 or 3 years at
our school. Have about a 1/2 mile range. I know you want more range.
The problem with the FM 10 is frequency drift. Ramsey has a new FM 25
out with PLL. Should solve the problem.
Good Luck

> --Leigh Marrin/KM6JE.

Main advantage of Atlas 210x is price. You can get 'em for under $50
with the noise blanker and AC power supply/console. Make sure you get
the noise blanker for mobile use. My Dodge Motorhome puts out so much
ignition noise that I can't hear anything with the blanker off.

I've found that the continuously
variable antennas like the "screwdriver" go a long way to solving
the problem of rapid power drop with increasing SWR. Unless you
stick on only one frequency, don't even try to run one mobile without
a tuner or remotely tunable antenna.

Bottom line" if you have to pay more than $100 for the Atlas, you're
probably better off with a real radio.

>>If you baught the radio at a Ham Radio Store they would have said :
>>"You baught it now you are stuck with it."

Absolute rubbish, of course. My local HRO would gladly exchange the unit
for a new one with no hassles whatsoever.

Don't lay your prejudices on us...we know better.

Yeah? If that's true then maybe it would be more healthy for you if you didn't annoy me, huh?

Especially since this "psycho" is a gun-totin' marksman,(avgerage shot groupings: sidearm: 4" at 75', rifle: 2" at 300'), with both bounty hunting and combat experience, a former postal worker, a former body guard of a certain Sicilian celebrity, an active militia officer, and (of course), a "right-wing" NRA supporter.

And damn proud of it all too!

Now go back to playing with yourself, boy, and leave grown folks alone.

Ted

The DX Engineering speech processor for the Drake line used RF compression techniques. The audio driver tube was removed, the speech processor inserted in its place and the tube went into the speech processor. They worked very well.

> Who knows more about the details of receiving and decoding the
> transmitted data?

In many countries you are not *supposed* to operate on the specified
frequency.
So don't get caught.

The easiest way to run the thing is to (on the ground) try to get the
sensors to
show different conditions then receive the signal then run a FFT on the
audio to
separate the tones and decode them. You will need a lot of points to get
high
resolution, but you can use a sound card in your computer. To get useful
info,
you will need to calibrate the device. So stick it in your refrigerator
with a
thermometer and find out which tone changes and by how much. Do this at
a few points and hopefully it has a linear response and you're all set.
Pressure
is more difficult, but can be done if you are determined by finding an
aluminum
aircraft shipping container and using a small pump to lower the pressure
then
using a gauge you can get that relationship. Humidity is tough since
sensors
usually aren't too accurate; you'll have to rely upon weather reports and
check
out the tone range on wet and dry days.

...Good luck

Hi and thanx for reading.

I just bought the FT-50R and was dissapointed to find out that the
Battery cannot be charged OFF the radio.

The only way I can charge the batteries off the radio as far as I know
is to but that $100 Rapid charger.

Does anyone know a cheaper (less than $50) way to charge the batteries
seperately????

Thanx again

The CA-15 will allow you to use the charger that comes with the radio
to charge the battery separately. If you are interested in rapid
charging then you'll either need the NC-50 with the CA-14 adapters or
the MAHA MH-103Y.

I have a T1900 Toshiba laptop for sale or trade. 486/20, 4 meg ram,
200MB hd (doublespaced to 385MB), monochrome VGA, quickport
trackball pointing device, 14.4 PCMCIA fax/modem, briefcase style
carrying case.

Charging circuit is going out -- will boot from charged batteries,
but not from AC/DC adapter. After booting, AC/DC adapter can be
used. Won't charge batteries.

All for $300 plus shipping, as is, or would prefer trade for
Oscilloscope, >40MHz dual trace, with 1x/10x probe. Multi-band QRP
equipment also considered.

E-mail interest only, please. Snail address is no good in Callbook,
and I have no phone in my name.

If trade, we'll each ship our own stuff.

532. FYI: 1277 Links To DX & Ham Radio

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-07 00:00:00 UTC
From: AC6V <ac6v@ix.netcom.com>
Message-ID: <334904DE.53EB@ix.netcom.com>
Source record: 178504
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.misc

From Ham 'Accessories to Zones' the DX Reference Guide has expanded to
60 pages and 1277 links. An index is now available for quick clicking to
the subject desired.

The Technical Reference Page now includes links to Amplifier Theory,
SWR, S-Units, dB tables, Antennas and much more.

The origin of '73' and the term 'Ham' are covered along with some
dubious humor and links to a list of 'Famous Hams'.

DXpeditions past and future are summarized and linked.

An extensive search came up with around 40 ham and electronic kits,
components, and circuit boards for homebrew projects.

The Mega-Prefix list covers the weird ones and new UK calls.

Have problem with mars mod on the yeasu 3000.

After cutting the green wire, does anybody know the correct way to reset the radio?

Pressing F1 and F2 while turning radio on does not reset this unit and open up the new frequencies.

Would appreciate any helpful input on this subject.

539. Yaesu FL-110 info needed

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-08 00:00:00 UTC
From: lew28@aol.com
Message-ID: <19970408001000.UAA22834@ladder01.news.aol.com>
Source record: 178312

Does anyone have any experience with the FL-110 amp from Yaesu? I have a Yaesu FT-301SD that I want to use it with. Is there a connection needed from the accessory jack on the rig to the amp? The only wires going from the rig to the amp are 13.5V and the ground on a rectangular connector. The other pins don't seem to be used. I'm not sure how to get the PTT relay to trigger the amp. Any help would be appreciated. Please e-mail LEW28@AOL.COM

The Yaseu adapter is a platic module that plugs into the side with
the fancy 4 pin plug, it is molded (2 pieces held with screw) plastic
that comes to the top of the radio, hooks on to the antenna, and has
two jacks level with the top face.

Then I plug in my cheap Radio Shack speaker/mic and it does fine.
Have used extension speakers on it too.

Hi Rod!

OK ... here goes. My source is the *current* UK amateur license
booklet, published by the Radiocommunications Agency.

G England
GB Special Event Stations anywhere in the UK, Channel Is or Isle of
Man. (Not just England)
GD Isle of Man
GI Northern Ireland
GJ Jersey
GM Scotland
GU Guernsey & Dependencies
GW Wales

2E England (Novices)
2D Isle of Man (Novices)
2I Northern Ireland (Novices)
2J Jersey (Novices)
2M Scotland (Novices)
2U Guernsey & Dependencies (Novices)
2W Wales (Novices)

M England
MD Isle of Man
MI Northern Ireland
MJ Jersey
MM Scotland
MU Guernsey & Dependencies
MW Wales

GX, MX England (Clubs)
GT, MT Isle of Man (Clubs)
GN, MN Northern Ireland (Clubs)
GH, MH Jersey (Clubs)

GS, MS Scotland (Clubs)
GP, MP Guernsey & Dependencies (Clubs)
GC, MC Wales (Clubs)

The meaning of the numeral after the prefix is rather complex, but is related to the License Class. Class A = full privileges, all bands. Class B = no code, for 50 MHz and higher frequency bands only.

1. All calls with one-letter and 2-letter suffixes are Class A.
2. For calls with 3-letter suffixes:
2, 3, 4, 0 after the prefix signify Class A.
1, 6, 7, 8 after the prefix signify Class B.
(At present, there are no 3-letter-suffix callsigns issued containing the numeral 5 and 9)
3. These rules apply to Novices (Class A and B) as well as Full Licenses (Class A and B), but Novices are only allowed to use small sub-bands within the "full" allocations.
4. There have been many "oddities" in respect of GB (Special Event) callsigns, for example GB800, GB100, GB50, GB9, etc. For these calls, it seems "anything goes"! Special Event calls are issued by the RSGB; all others are issued by the Radiocommunications Agency.

Hope this helps.

For god's sake don't cut any green wire ! The mod is a bit more
complex than that, you need to remove a couple of jumpers (behind the
display panel) depending on the mod you want.

Hi,

I think, you have just the transceiver in cross-band repeater mode. For confirme this, see the point on all number after Mhz. For disable this, push the F touch for more 1 second and push the Mute button.
Personnaly, i use this transceiver for local CROSS-BAND REPEATER.

Best Regards from F5SUY Yvan...

according to the manual it is possible but in general a pll tranceiver
is not the best choice for packet unless the modulater uses a cristal

I am using a modified nokia carphone (nmt2) it uses a pll plus a cristal
osc for modulation also a siemens capone is useable there cheap to get
and
easy to modifie (approx $100)

560. Heath SS9000 Value ?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-08 00:00:00 UTC

I am looking for a better way to align a 2-meter Motorola Micor. I have the service manual but I do not have the alignment set it refers to. Does any one have one cheap. I want to do this right.

I can be reached at:
Ed Rainsberger - KD4CBD
4715 Kentwood Lane
Woodbridge, VA 22193

or

rainsberger@attmail.com or erainsberger@juno.com

564. Icom A20 discriminator help please.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-08 00:00:00 UTC
From: scanner_man@hotmail.com
Message-ID: <860500059.22106@dejanews.com>
Source record: 178337

I hope somebody maybe able to help:

I am trying to take the above output from an Icom A20-MK11 (Aviation tranceiver). I am led to beleive this is from Pin 9 on IC4 however I would appreciate if anybody could confirm this and also what the best wiring arrangement would be.

Should I include a Resistor or Cap anyplace on the line out.

Help much appreciated.

Thanks.

You must be a newbie who never tangled with junkmail robots before... if so, you'll find out soon enough! And there are no "standard conventions" in unmoderated newsgroups,(from what I see), or else those dunces who post vague For Sale ads that mention no more than a make & model number wouldn't be tolerated by so many liberal-thinking slouches.

Hi Frans,
forgive my ignorance, is your nokia operating on only one freqency or
you are capable to tune to other freqs, also?

On what freqency this nokia can work?
Is seamens available in USA?

568. Motorola Syntor X - how to reporgram it?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-08 00:00:00 UTC
From: poseidon@ziplink.net
Message-ID: <334a56f2.2247849@news.ziplink.net>
Source record: 178341

Hi,
has anybody tried to reprogram Motorala Syntor X radio. It operatates
on 450 and above. I heard that it is possible to set it to work within
the amatuer band using a software.
This motorola has 110Watt power output.

Any info will be much appreciated.
Thank you

569. HTX 204 - reply to questions

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-08 00:00:00 UTC
From: Tom@saddlecrk.COM
Message-ID: <s34a206b.029@dsm-usa.com>
Source record: 178342

davros@ccwf.cc.utexas.edu sayeth thus:

>Does anyone actually have one of these radios?

Yes. I bought a R-Shack HTX 204 about 3 weeks ago.

>separate volume/squelch knobs (real knobs?)

Yes, real knobs. Each band has a separate knob with two parts, an upper part for volume and a lower part (easily discernable by touch) for squelch.

>* Do the buttons beep when you press them? (Even better, do the buttons beep with different pitches?)

Yes, the buttons beep. There is a different pitch if you press an incorrect function sequence. When you switch between bands, there is a single beep for 2 meters and a double beep for 70 cm. Now that you have asked the question, I notice that there is a way of telling the status of most functions audibly by scrolling through them. Nice touch.

>* Is there a readily identifiable way (audibly) to tell things like high or low power, for instance? Keyboard lock status? Etc.?

Yes, as above, there seems to be an audible reference point for most functions, so once you learn the keypad and sequence you should be able to operate the radio by sound only.

>* What is on the setup menu?

Lots and lots of stuff. Here is a partial list:
AM mode on/off
Automatic Power Off on/off
Automatic AM on/off
Automatic Repeater Shift on/off
Keypad Beep on/off
Clone on/off (you can transfer all settings from on HTX 204 to another)
CTCSS frequency
DTMF Transmit Speed
Dual Watch Speed (a monitoring function)
Duplex on/off
1k Digit Display on/off
Repeater Offset
Page Ring on/off
Page Squelch on/off
Repeater Delay on/off (for crossband repeater function)
Crossband Repeater on/off
Speaker Mode (how the internal speaker behaves with an external connected)

Each of these functions are separately settable for each band. There are others I left out of this list, but not many. There are other functions and settings entered directly through the keypad rather than the setup menu.

>* Does the setup menu beep at the beginning or ending entry? (This would be useful...unfortunately, none of my Yaesus did this...but they did have a different beep for each key, and beeped higher for high power than for low power, and some other useful things...like you could tell if the keyboard was locking or unlocking, direction of scan, what band you were switching to, etc. etc. by the tones...)

Yes, there is a beep at the beginning entry of the setup menu so you would be able to tell what function you were on by counting up or down from the beep point. I can't hear any prompt to differentiate between directions of scan.

>* Is the system for directly entering frequency or memory channels intuitive?

Yeah, pretty much so. You can tell when you are in memory mode or not by the beeps, and you can press the Clear key to get out of memory mode or any of the several scan modes. Seems like you might be able to get by OK by sound alone. There are lots of features and functions so learning them all (especially by sound) is a formidable process even for a propellor head like me.

I think this is a pretty good radio. The little rubber antenna doesn't do very well, I've already replaced it and it receives much better now. The RS guy (didn't I see him cooking fries in McDonalds last week?) said they were coming out with better antennas soon. Right. Modifications to this unit can be done via hardware or software, but I don't know any reason to snip wires if you can accomplish the same thing by pushing buttons. The manual came with mods for expanding rx frequencies, I found mods for expanding tx frequencies on the web. I am not yet licensed to transmit on any amateur frequency, so I don't. I'm studying for my novice ticket now (and learning code, thank you very much).

Good luck. I, by the way, am in no way associated with Radio Shack or ADI or any other company or organization that has anything to do with radios or communications or anything else under the sun for that matter. I just like toys and had enough time to respond to your questions this morning. You're welcome. ;-) Uh, that was a winking, smiling emoticon I just typed, in case you are using a text-to-speech program.

From: bjacob@iofc.com
Message-ID: <860516492.357@dejanews.com>
Source record: 178349

I would like to know if anyone else out there has had a problem with noise generated by the Astron power supplies.

I used Astron switching and linear power supplies to power a Yaesu FT-900/CAT, and experienced noise problems that were most evident on 160 meters and 80 meters. No problem receiving stations that boomed in at 20 over 9, but weak sigs were covered by a "hash" noise that seemed to be generated by the Astron supply.

Problem went away when I switched over to 12 volt auto storage battery.

Anyone?

Please reply to me direct, as I have been having some problems with newsgroups from my current ISP.

Maximov Publications and Leonardo

announce

Space Arts Workshop '97

On April 13, 1997, a select group of artists and scientists from around the world will be gathering in Paris, France to discuss the social and cultural aspects of exploring space.

Seventeen individuals will be presenting their works of art, speaking as artist as space explorers. Among these people, is artist Arthur Woods whose work, "Cosmic Dancer" flew aboard the Mir Space Station. Also speaking will be Richard Kriesche, artist of the first art project in the history of the Russian space flight, to fly aboard the space station Mir (1991).

The event will be broadcast over the Internet via Maximov Publications Special section on the Mir Space Station (http://www.maximov.com/Mir/). You can view the preliminary pages at

http://www.maximov.com/Mir/mirspaceart.html

The space arts meeting is being organized by ars astronautica, Leonardo - the Journal of the International Society of the Arts, Sciences and Technology, Maximov Publications, and the OURS Foundation.

Workshop members will go online to answer questions from users (April 13, 1997 at 4PM to 9PM GMT).

During the event, Amateur Radio Operators around the world will be relaying questions to cosmonauts aboard the Mir Space Station. In order to get the questions to amateur radio operators we are asking for submissions before April 13th.

*** CALL FOR QUESTIONS ***

We are requesting questions for both workshop members and cosmonauts. Please submit your questions to Mark W. Curtiss via email (mcurtiss@excite.com) or via the online form (http://www.maximov.com/Mir/mirspaceartstalk.html). Results for these pages will remain posted at this site for future reference.

Thank you

578. Help:TS-830S analog dial problem...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-08 00:00:00 UTC
From: Michael Melland <badger@vbe.com>
Message-ID: <334A8C6B.5AF5@vbe.com>
Source record: 178351

My "new" TS-830S has an analog dial problem. The digital display is right on but the corresponding reading of the analog dial is about 15 kHz too low. From what I gather this is not an uncommon problem (probably why they no longer put the analog dial marks on transceivers <grin>). The manual and service manual cover calibrating the digital display to WWV (what the heck does "adjust the IF for a low AF" mean and why do it ??) which is easy to understand with the above exception. Manual also has a section on adjusting the analog reading by going to 50 analog and then adjusting TC1 in the VFO Unit to make the digital display also read 50..... then checking again at 450 analog, if the display is off from analog 450 they say to adjust the TC1 plus or minus the error and then adjust L3 back up to 450.... (in essance)

Why do that if all that is out of whack is the analog dial (as I said WWV comes in right on 10.000.0 digital and the cal checks (25 kHz) out too)... wouldn't this adjustment procedure also screw up the analog readings ??? Can't you just adjust the analog scale (dial) to the proper point to read accurately ?? If the above is "necessary" do you access the VFO unit board from bottom.... can't see it with the top removed. What might I be missing or misreading here ??

Sorry for the long post....

Your don't need a Moto test set to align
your Micor any voltmeter will due. You will
need a good stable signal gen and a Bird watt meter(or equiv) and
a FM dev. meter.
Hi-Band Micors come is 3 different band splits, so be sure
yours is the 138mhz to 153 mhz or you will have to change many caps
in the transmitter. The 170mhz split isn't worth modifying as it takes too
many changes. If you don't already have any of this
equipment you local Motorola shop will be happy to
re-align the Micor and it will cost a good deal less
than buying the test equipment.

Message-ID: <334A8673.3F1E@qsl.net>
Source record: 178355

Impedance bridge are a must for any ham.
Basically they use an input signal which may be
external or internally generated (by a chopped noise source
and perhaps amplifier.) This signal is developed across
a 50 ohm load at the antenna terminal while monitoring
a receiver for noise at the 'null' port. Minimum noise
is 'Calibrated' for 50 ohms and make sure the dial display
50 at the pointer.
Now the test: connect your antenna to be tested at the
antenna/load connector. Connect your receifer to the null
port. rotate knob to either max or min and inject your
test signal at the frequency you want the antenna to be cut
to. Turn knob to minimum received noise as picked up by
receiver, which incedentally, the receiver should be tuned
to the EXACT frequency of your injected signal. If the null
is not equal to 50 ohms, set the bridge to 50 and tune receiver
until you find the frequency of the null. IF the Frequency is
higher -- antenna is too short, etc....

good luck!

Hi Jeff,
You can get handhelds radios for 2 meter band (the busiest band) pretty cheap on the used market. Listen to your local swap and shop net on a repeater if you have a scanner or read the rec.radio.swap newsgroup for deals.

If possible get a radio(s) with ctcss (or PL as its also known) with both encode and decode. You'll need encode to get into many repeaters and decode is very nice to have to shut the radio up when it gets overloaded by local paging transmitters etc (assuming the repeaters are sending a PL tone for your use).

Memories in the radio are real nice but having only 10 or 20 will suffice because you will find that you will use 2 or 3 repeaters almost exclusively. The other memories are nice for scanning purposes etc.

Standard battery packs of 7.2 volts (or less now with newer radios) can deliver 2 watts out of a handheld usually. This is plenty for most repeaters maybe 10 miles aways or more depending on your local terrain.

Battery packs wear out. Dont be suprised if a used radio comes with a pack that wont hold a charge for more thatn a day (needs daily charging). Battery packs can and must be replaced every so often. I bought my last pack for $25 from ... Mr Battery ... can't remember exactly but it wasn't too expensive. You can go for the latest Nickel Metal Hydride if you want and rapid (1 hour chargers) but the old wall cube type charger suffices for most hobby type radio-ing and it usually comes with the radio free.

If you can spend more, get a dual band radio. Its nice to have 2 Meter(146 Mhz) and 70 Centimeter(440 Mhz) bands available. 2 M is crowded these days. 70 cm is close behind.

I you want more power or long range communications back to the house then you may consider buying one mobile radio for its high power capabilities. One mobile in the car and one handheld at the house is a common setup especially if you have gotten the wife to go for her license too.

Good luck and If you don't pass the first time find the next test session and try again. Radio is great for kids. Encourage them a little and they may pass you up with all the free time they have.

Have fun.

Hi Gary:
At least KENWOOD acknowledged a problem and recalled them back! Some of the other manufacturers let us just complain on the internet about problems with the newest radios, eg, fan noise, intermod on 2 meters, etc. Too bad AES didn't let you know though. BTW, I love my new Kenwood low band radio. Frank KG9H

If there is a recall on the TS570D then Kenwood has not let this service center know about it. Sounds like AES couldn't fix it or didn't know how.

Gee if they shutdown channels 2 through 6, maybe 6 meters will become
usable in areas (like NYC) where channel 2 is in use. Maybe 6 meters
can get some more spectrum (hah) :-)

608. Trade: Yaesu Charger For Desk Mic

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-08 00:00:00 UTC
From: Gary Baker <gbaker@pacifier.com>
Message-ID: <334B03C6.5991@pacifier.com>
Source record: 178381
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Gary here,
I have a Yaesu NC-42 Drop-in quick charger that I no longer use.
It will work for the following radios: Ft-530, Ft-416, Ft-415.
I would like to trade it for a Desk mic that would fit my Yaesu Ft-890.
I think it is a MD-1c8 desk top mic.

609. Yaesu FT-50R - Opinion?

Newsgroup: rec.radio.amateur.equipment

610. Trade Yaesu Charger For other Yaesu Accessories

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-08 00:00:00 UTC
From: Gary Baker <gbaker@pacifier.com>
Message-ID: <334B066E.7038@pacifier.com>
Source record: 178383
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have an NC-42 drop-in desk top charger that I no longer use and would like to trade for any of the following accessories that might not be in use by another ham.

FTS-22 Tone decode module for the Yaesu FT-5100, FT-5200, or the Ft-8000

MD-1c8 Desktop microphone for the FT-840, FT-890 or newer radio

FIF-232C Cat System Interface

If you might have any of the above and are not using, maybe we could work a deal?.

621. Help With Henry Tempo 2002 Amp needed

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-08 00:00:00 UTC
From: daveb@buffnet.net
Message-ID: <5iceke$e7c$1@buffnet2.buffnet.net>
Source record: 178394
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.hombrew

Hi Folks,

I recently acquired a Tempo 2002 Henry Amp. The amp loads perfectly
(L4 link inductor) with the safety cage (internal) off. In fact the
link is well above the top of the cage when properly loaded.
L4 does not appear to be the OEM part. It was hand formed (poorly) and
is too large.

A call to Henry didn't help. No replacement part or dimension drawing
is available.

Just to confirm what I thought I formed another which is smaller
overall and now loads in a much better position (physically lower).
Problem is with the cage back on the situation is better but not quite
right.

I'm hoping some kind soul who owns one of these beasts could provide
the dimensions (or a photo with the cover off) of L4.

Thanks .....

daveb@buffnet.net

Is the little red light between the 100kc and 10kc knobs light up??
If so the pll is unlocked. Otherwise start looking at the switched 8v
line (R8 and T8) where it goes into the relay. Or try the CB line (9v)

I could go on forever so give a few more clues..

>public safety agencies since that dovetails nicely with the existing use
>that the old channels 70-83 went to some time in the late seventies.

I think the cellular-phone operators will have more clout, and will
want 64-69 because it's closer to their existing spectrum. Of course,
it's also closer to 800MHz public-safety spectrum, but they don't have
much political clout.

I should emphasize, the list of channels to be reserved for
public-safety are my speculation, nothing official from the FCC. They
have officially specified they plan to reserve 4 channels, but they
haven't officially specified which 4.

> It would also seem to me that we should make a clean break with
>the past and convert all frequencies in the present 12 VHF channels to
>expansions of the present VHF low and VHF high bands for public service,
>amateur, and commercial service.

A certain number of channels are necessary to provide
interference-free TV service. The FCC feels we need to start with 59
channels at the beginning of transition, and end with 45 when
everything's converted to digital. (some would argue that isn't
enough, but I won't debate that here...)

We could convert the VHF channels to two-way use, which was indeed the
original FCC plan. However, that would require us to keep 12 more UHF
channels. My guess is the two-way interests feel the UHF channels are
more valuable than the VHF ones.

Source record: 178216

Hello,

My CE-4000 service monitor has been having power supply problems. At the onset the scope intensity dims. As things get worse a pulsing unlock condition leads to power supply failure.
I have repaired various semiconductor components in the power supply several times. I have replaced them with either identical or equivalent per documentation from Cushman.
What I would like to know is if anyone out there has had similar problems like something drawing too much current and zapping the power supply. Any insight appreciated.

Thanks for reading. Please e-mail directly.

635. Keyers

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-09 00:00:00 UTC
From: Jetleb@netcom.ca
Message-ID: <334C7133.5D1C@netcom.ca>
Source record: 178224

Hi everyone! I'm new to this so forgive me if I screw up. There seem to be some interest in building keyers, so I thought I would throw my latest project out for anyone who is interested. While getting my 5WPM endorsement in November, it occured to me I had nothing to practice sending with and since I had missed all the flea markets, I was in dire straits so I built my own. I know, I could have bought a new one, but I'm too cheap :-), and besides, I don't even have an HF radio to use it with, so I'd best save my pennies for that.

Anyway, this particular keyer should cost no more than about $20CDN ($15US), depending on where you get your parts (a lot cheaper if you have a well stocked junk box). All of the parts except the processor are available from Radio Shack if your wallet is deep enough. It handles the four main types of keys (straight, bug, paddle and squeeze) and automatically configures it self for the type of key and the operator's preference for right or left handed operation. You can set the code speed, tone and volume and it will key a radio, but there are no other "features" (beacons, etc.)

I also had to build my own key which I used to pass my test. Plans for it are in the documentation for the keyer, if anyone is interested. I should point out that I'm an electronics technologist who is "temporarily" working in a completely different field. Back when I was working for an industrial controls company, we kept meticulous technical documentation on all our products, and, having been out of my field for a few years, I decided I needed the practice. I also decided that since several local hams were interested in my project, and that since they were not all of the same technical background, it would be prudent to accomidate them in the documentation as well. Consequently the documentation runs at about 5M bytes, uncompressed (2.something when zipped), so it is nothing if not thorough.

The entire project was done in Windows95. This includes product photos, mechanical and schematic diagrams (done with Autosketch R2.1) and, of course, the text. I can convert this to Windows3.1 format or straight text (minus the diagrams and photos) for those that are using Windows3.1 or MSDOS.

If anyone is interested, Jump up and down, or email me at JETLEB@NETCOM.CA

Oh, and as I said at the beginning, I'm new to this newsgroup thingy, so if you want me send you the complete plans, you're going to have to teach me how to do it :-0. I don't think that at 5Mb, I should dare to "attach" it here.

Regards
Matthias Jetleb VA3-MWJ

With regard to the question of how to mount a glass-mount antenna, may I suggest going to your local windsheild replacement shop and have them glue it on? My mirror fell of last summer so I went to one of the above shops and they glued it on - no charge. It's only a few drops of glue to them.

I bought the Vertex CA-15 charging stand and a second battery. One battery is on the radio, the other is in the charging stand (it uses the charger that came with your FT-50), and by the time one battery is run down, the other one is ready to go. This is a lot cheaper than going to the rapid-charger system, and might even result in longer-lasting batteries. By the way, you can set the entire radio with its battery attached into the charging stand, which might be preferable if you are trying to get by with a single battery...

** FoxGap CW Station Identifier **

This unit is great for repeater identification, when your machine is up and running, or when you are down for repair and want to maintain a presence on a desired frequency. Also it is perfect for beacon use, just add a transmitter. For beacon use it will control your PTT on your FM rig, or key your output in sideband mode.

Features:
* Adjustable CW speed, 5 to 60 words per minute.
* Adjustable code tone, 200 to 1200 Hz.
* 55 character message buffer, plus.
* 55 character alternate message buffer.
* Repeat message time, 1 minute to 24 hours.
* Programmable from your IBM computer.
* Windows 3.1 or Win 95 compatible.
* Adjustable audio output.
* PTT output and Key (or beacon) output.
* Programming cable supplied.
* Small size, 3"L x 1.25"W x .75"H
* Standard 12 volt operation.
* Under 50ma. current consumption.

Programming requirements: IBM or compatible computer with a mouse and one 3.5" HD floppy drive, running Windows 3.1, Win 95, or higher. And a second COMM. port (2,3, or 4).

The FoxGap CW Station Identifier lists for $69.95 For a limited time the intro offer is $50.00 Shipping extra. We can ship UPS COD cash only, MO, or certified check. For further information contact Jim at 610-588-0282
Fax 610-588-0253 Or email n2gkw@epix.net

> so its not easy to pull the plug out.
>

I agree, the speaker/mike works great when I use my FT-50 in the car
with
the cigarette-lighter socket power adapter and an externally mounted
dual-
band antenna. I broke the little plastic clip that secures the cord to
the antenna within the first 2 weeks, but I tossed it out and have never
missed it -- the plug fits into the radio plenty snugly, and has never
even come close to being accidentally pulled out. (I broke it in the
process of repeatedly opening and closing it to detach/attach the mic to
the radio, NOT by tugging on the mic cord too hard while the whole thing
was assembled and in use.)

It would be neat if there was a speaker/mic with a DTMF keypad, as I
find
it basically impossible to keep one hand on the steering wheel, one hand
on the mic/PTT, and reach over with the other (?) hand to work the DTMF
keys on the radio, but... considering that the entire FT-50 (exclusive
of the rubber duck, of course) is about the size of some DTMF mics, I
can't complain too loudly about that; besides, even with the keypad on
the mic, it would still be kinda awkward to dial an autopatch while
driving.

The issue is not what you would do to take care of your equipment. The issue is what the previous slob did with/to the equipment you're gonna buy. And there are a lot of people who live like slobs...a lot...

I've been in the TV repair business. I've had girlfriends with cats and had to fix stuff around their houses. In all cases, the cat hair gets into everything. It gummms up the ventillation. Humidity makes it conductive and messes up high volgage stuff. Once the arc thru the hair makes a carbon track on the ECB, it's too late. It's gonna fail sooner or later, no matter how much you try to clean it.

I can think of three possible reasons for this:

1. The voltage is lower on the battery in your car (or there is more
voltage
drop between the battery and the radio).

2. The antenna system in the car is not up to snuff causing the radio to
go into
"SWR foldback" (reducing power to accomodate a high SWR).

3. There is RF getting back into the radio due to the positioning of the
radio
and antenna system causing it to THINK there is a high SWR so that it
reduces power.

>

I use the speaker/mike all the time. It works great. Audio, both receive
and transmit is excellent. The mic has a PTT on it, both PTT on the radio
still functions also. It comes with a clip that secures it to the antenna
so its not easy to pull the plug out.

I use the ADMS software to get the freeband coverage on a new FT-50R.
It will tune everything from 50 - 999 mhz except 540-590. I do not know
how the sensitivity is but in the 225-400 range you can choose Wide or
Narrow FM and AM. AM is the default.

> I've read about the "remove the jumper" and "remove the resistor"
> modifications, and I'll assume I can perform them with no difficulty.

Tiny parts. Need steady hands.

> I'd really prefer not to have to buy the software to do the freeband
> mod. There have been so many postings that I am now a little confused
> about which mod does what. If it makes any difference, reception of the
> blocked cellular frequencies is of no interest to me.

The MARS /CAP mod (remove solder jumper)enables expanded transmit from
120-232 & 313-507. The Freeband hardware mod (remove resister) allowes
you to switch to any of several band plans storred in ROM. One of these
is the HAM bands only set up (mine came this way out of the box) another
is Freeband. With the resister removed you can switch to these bands by
a combination of key strokes/power up.

There is a Software only mod that allows both the MARS/CAP TX
frequencies and the Freeband mod. It involves modifying a file created
with the ADMS software with a hex editor. This takes about 60 seconds
and doesn't necessate opening your radio and voiding the warranty. The
result is the same with either approach except that with the software
only mode you can not switch band plans with key strokes. You must
modify a file and upload it to the radio.

You should consider the ADMS software even if you make the hardware
mods. It is very useful for programming th 100+ memories and allows you
to save as many setups as you want. You could have a diferent setup for
ham, scanning, etc or one for each area you travel in. It is so much
easier to set up every thing and just dump it into the radio. It sure
beats pushing the tiny little buttons a thousand times!!

Good luck what ever you choose. They are great radios.

Like I said before, it's okay if you own a cat if you don't let it near
things you don't want a cat near. The same goes for dogs or any other
animal that can't be kept in a cage or an aquarium all the time. I like
cats but I personally feel it's abusive to keep them in your house if
they're not sick. They are animals, not human beings. Nature gave them a
fur coat instead of the ability to build a house because nature intended
for them to live OUTSIDE. Besides... fleas can't get in the house if the
animals stay out!

BTW... I bet there's more that one person out here who could tell several
"old war stories" about the dog who liked to chew on coax.

Maybe after buying that $7000 rig and accessories they can't afford
things like doors or tables or other rooms and have to sit the radio on
the floor of their one room motel room next to the litter box. Heh-heh!

Dogs drool, but cats rule!

There's still about a 50/50 chance 2-6 will indeed be removed from TV.
If that happens, I do think amateur radio stands some chance of
getting some of the band. (my guess is something in the vicinity of
70MHz as British hams already have a band there)

Would you guys please explain just what your cats are doing to your equipment? I have three cats, one of which sleeps on top of an SW4A, and have never had any damage, stain, smell, or anything to poorly effect my radios. I do have to dust the equipment once a week to rid cat hair but I assume most people dust once a week anyway. I have had both cats and shortwave radios for 25 years with zero problems. Maybe it is true that pets take on the habits and actions of their owners. :-)

Being from the heart of tobacco country (now there is an ironic juxtaposition) however, I agree that tobacco smoke is a problem to clean. Pro409 does do the job with just a little effort.

Mark

I just bought a Syntor 6m rig that the local hydro utility "throws" away.
I paid a good price for the rig,and only 50 bux for a preprogramed eprom.
It works really great,and also has 10m in the one bank.
If nobody can help you there ,,we have a progrmmer wizard here that
has done 2m,and 6m syntors.He tried to explain it to me but it was
all Greek to me,,,something about "hex",,,I told him that I didn't
want no hex on my radio!

>I have recently decided I need a 2 meter/440 rig. I was looking at the Kenwood TM-733A-BLMD, which has been discontinued but some outlets have a few left for around $450. It would seem to have everything I need. I assume it works as a >crossband repeater, which I want. However, I notice it cannot receive on VHF and UHF at the same time.

The 733 CAN receive simultaneously on both bands, if programmed to do so. I personnally prefer the mute feature.

I wonder how well owners like this rig. Is the new TM-V7A that much different?

I own a 733 and enjoy it. The TM-V7A? Well, its more expensive.
>
>I was also considering the Yaesu FT-8000R. It has extendend receive which the Kenwood does not.....

Well, what do you define as extended Rx? On UHF, the K'wood goes up to 470Mhz, and on VHF it goes into the 170's.

(and more expensive). I am kind of intrigued by the extended receive (can the celluar freq. be opened up?) though I noticed that QST said the >sensitivity up there was not all that good. I wonder how that works out in actual practice (maybe all these rigs with extended receive suffer from poor sensitivity?). Any comments on these rigs or other dualbanders.

I have a bad memory with 180S. Couldn't keep the finals.
Kept blowing up. Did not have good protection circuit then.
BTW, TS-520 was double conversion, 820 was single conversion
design. My base station rig is still Trio TS-820S(JA version
of Kenwood TS-820S). It has a reduced 10M output but a jumper
took care of that. And added WARC band mod. a few years back
based on QST article. Never quits keeps on working.

Another very good source of lightning protection (and devices for such activities is http://www.polyphaser.com/ - they have an excellent line of lighning protection devices, and a very good book on the subject.

Their web site is currently under construction, and several of the links are not yet operational, but it looks like the text of their excellent book on the subject, "The Grounds for Lightning and EMP Protection" will be available at this site.

How about your prejudice in favor of HRO? Here's a news flash for ya...

Did you know that HRO LIES to hams in their catalog about many factory
suggested retail prices?

2 Cases in point:

Standard's C156A and C228A HT's.

HRO lied about them in their latest catalog by saying the price HRO asks
is HRO's own special discount price and that the factory suggested price
is much higher, when in fact, HRO's "discount price" IS the factory's
suggested retail price!

HRO Says...

Model Suggested HRO Price

C156A $289.95 $199.95
C228A $695.95 $579.95

Standard Says...

Model Suggested

C156A $199.95
C228A $579.95

This is the case on many many items in HRO's catalog.

Bottom line: HRO is lying and probably has been for years!

I thought Jun's was a rip-off... then I went thru HRO's catalog and saw HRO wrote the book on rip-offs! It wasn't hard to bust them in their lie because all the manufacturers are now on the internet.

If you want to pat a company on the back, look to Ten Tech or AES. They are two of the most straight-forward companies around and they deserve a pat on the back.

You guys know by now that I am a master at fault-finding and criticism, so if I tell you that a company is okay, then you can bet your fuzzy butt that I HAVE scrutinized them and that they ARE okay! Because if they are not right you can believe I'd verbally rip them to shreds and enjoy it! There's nothing a man who is dirt poor hates more than someone trying to rip off what little he has or who is not giving him his money's worth!

And HRO is a sad case too. They are so big that they can afford to be straight with us but I guess maybe greed has blinded them to the fact that hams are not stupid and we eventually find out when a company is full of crap and most importantly, we the consumers made HRO as big and successful as they are and we the consumers can put HRO back in the poor house just as quickly. That goes for any company.

I don't get any money from any ham equipment maker or distributor so I have no bias in my critique or my praise of a company. I call em like I see em... and if they don't like it they can go straight to hell.

The ADMS software/connection cable is very good.

You are better off buying the package as the cable would be somewhat difficult ot make.

If you are really desperate to see the software, I could proably email it to you.

You can make the freeband mods without the software if you have one of the later radios.

Raymond, You got that right! Cats are my favorite people! And clean too!
They don't leave something around for you to step in like dogs do... they
bury it! If these guys bring the cats in the house that's their mistake,
not having a cat but where you have a cat. Mine live outside my front
door with a fence between them and the guard dogs. I allow no animals IN
the house, but they are great to have around outside and to care for. And
since the cats love to climb on the roof, I never have birds pirching on
my beam to poop on whatever or whoever is underneath! That is a problem
lot's of hams have... but if they got a cat they'd lose those feathered
bombers!

I just checked out Ted's comments in the HRO catalogue and he is
abolutely true. HRO JACKS up the "LIST PRICE" and charges more than
the other guys for the same thing. If you see a "LEGITAMATE" price that
is lower elseware they will match it. BUT WHY GO TO THE TROUBLE?
Buy from the guy who is happy to sell it to you for his low price.
Lets get more Ham Dealers in the Business! If HRO keeps buying up the
small guys they will be so big that they will charge whatever they
want and we will be powerless!!!!

On my Jeep I glued aluminum to the underside of the roof and connected
it to the shield of the coax.

>Is there antenna that don't need metal
> for mobile application? Do they work?

Antenex makes mobile antennas that work without a ground plane. They
are typically used on trucks, schoolbuses, etc., that have fiberglass
roofs.

With regard to all of this "HRO bashing"...

I have been buying gear from HRO for several years. I have seldom been able to beat their prices, no matter who I call. I have always received prompt, courteous service over the telephone, and my order has always been shipped immediately, from the closest store. I like their policy of offering free shipping on orders over $100 (important when you order an HF rig that weighs 40 pounds or so).

I can't dispute the numbers that these fellows have been quoting on the prices of Standard HTs. I couldn't begin to justify why HRO's catalog contains seemingly bogus MSRPs. I really don't care. Maybe it was one of those cases where "prices are subject to change without notice" and the catalog had already been printed? This has happened before. With the violent fluctuations of the dollar vs. the yen, it's happening more frequently than ever before. Something to consider.

I've bought Kenwood, Icom, and Alinco rigs, and accessories from several manufacturers, from HRO, and I am completely satisfied with their service and their prices. The only new rig I've bought anywhere else in the last several years has been a Kenwood TM-261A, which I bought at AES. It was on sale for $20 less than HRO, and even though I had to pay the shipping, I saved about $12. Other than that one instance, I couldn't beat HRO's prices at the time I was ready to buy.

I'm sorry to see the discrepancy in the Standard HT prices. However, I will continue to buy from HRO as long as they continue to offer me the best prices and great service.

Note that I have no complaints about the service that AES offers either. They are a great bunch of folks, and I have done business with them many times over the years as well. It's just that HRO nearly always beats their prices on the items I've wanted to buy. Your experiences may vary.

This is not an invitation to "flame" me. If you have a differing opinion on this subject, that's fine (this IS still America, and we ARE allowed to have our own opinions). I will not argue with anyone about who is right and wrong on this issue. I just wanted to offer my experiences to those who might be interested.

73,

You might think of building your own.

That can save you a lot of money.

A 12-inch TV set can turn into a 30-watt CW
transmitter by the addition of a crystal and
coil and PI network, and of course clip some
of the existing circuits.

I made a Trx out of a TV a kid got out of a garbage can.

Is that cheap enough?

Gud Luk.

>W4OP- another ELNEC user

entire original postings kept.

If you get a package from the grocery store,
and cook it and serve it, was it "heat and serve"
or did you have to mix it up and cook it from raw?

If you made a HW-8 I believe it was Homebrew.
If you made a rig from an ARRL handbook schematic,
That too was homebrew.

If you started with a piece of paper, and a pencil and
designed the whole thing, that was RARE ! ! !

Ciao

Hi Benedict

I normal use it at one freq which is put into a eprom but it would be
possible to put 8 freq in one eprom the circuit i use is a modified
morse keyer

It can work on freq from 430 to 440 70cm ham band in the netherlands
it should also be possible to use it other 70cm freq used in the USA
I do not know if this phone is sold in the USA.

I also recently did some experimenting and research on mobile antennas. WHat you say is very true. Another example of the same effect is to use a rubber duck antenna on 2 meters and then change to a 1/2 wave antenna. You will see a tremendous difference due to capture area. That is, a bigger antenna collects more signal on receive and puts out more on transmit. As you said, hamsticks are very poor radiators below 7 MHz. THe reason is the losses in the tightly wound coil. The larger the coil and better core material the less loss you have. I did an experiment comparing a reasonably small diameter bug catcher (2.5 inches) to a ham stick. There was no difference above 40 m. At 40 m the bug catcher was 1 S unit better than the Hamstick and at 80 m the bugcatcher was 3 S units above the hamstick. These tests were done on transmit. I also learned thru experimentation and on the air discussions that a capacitor is required between the base of the antenna and ground for 40 m and 80 m. This corrects for the excess inductance present due to the loading coil. For my vehicle the value was 700 pF. You can't fool mother nature. The larger the antenna the better the performance. If you don't like big ugly antennas on your car you might as well stay off of 80 m. You can stand the 1 S unit loss on 40 m but the 3 S units on 80 m is hard to overcome. The higher bands are a lot of fun and the sun spots will soon bring them to life. I have had many years of great fun on HF mobile. 20, 17, 15, 12, and 10 will be great fun real soon. Regards Bo

710. Yaesu FT-50 Question

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-09 00:00:00 UTC
From: Kenneth M Gianino <ken@notify1.com>
Message-ID: <334BB1FF.BF9@notify1.com>
Source record: 178440

Would an FT-50 owner kindly tell me if the radio will tune the whole military aircraft band (225-400MHz) after modification? It's important that the sensitivity be reasonable and that the detector be switchable between AM and FM.

I've read about the "remove the jumper" and "remove the resistor" modifications, and I'll assume I can perform them with no difficulty. I'd really prefer not to have to buy the software to do the freeband mod. There have been so many postings that I am now a little confused about which mod does what. If it makes any difference, reception of the blocked cellular frequencies is of no interest to me.
Thanks,
Ken - WB0QNA

> 73,
>
> Paul K0PW

Thanks Paul but that don't work on this radio.... several others have suggested that but the inner dial of the vfo and the main tuning knob are solidly attached....only the outer silver ring will move as you suggest and this has no effect on the inner analog dial scale. Short of screwing with the tracking adjustments of the vfo.... I've been told that one can take the main knob off etc... and loosen a screw to turn the dial to match the display .... better advise may be to leave it alone and just use the digital display (which is right on).

>
>Barry

Hi Barry,

I do not understand what you mean by your third sentance (the run-on
one, that is). "Since" refers to time, so I must surmise that you mean
that "alot" previously was a word. Perhaps you could assume that the
author prefers to use this (apparently) archaic meaning. Or, perhaps
you really meant "because." I doubt that, however, as it is usually
considered to be poor construction to begin a sentance with "because."
But, just in case, may I suggest the following version of your erudite
criticism of the original author:

Hi there. "Alot is not a real word, therefore I need to know what it
means to you. Further, I am curious why you decided to use a non-word
in preference to a real word.

Notice how this version contains no run-on sentances and is shorter
than your version. Yet, this version carries the same pedantic message
as the original.

No charge for the grammatical advice (this time).

Cheers, Ron

722. DualBanders, Kenwood or Yaesu

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-09 00:00:00 UTC
From: Bill_Combs@macgroup.ORG
Message-ID: <0513.199704091219.03BED8A8@macgroup.org>
Source record: 178452

I have recently decided I need a 2 meter/440 rig. I was looking at the Kenwood TM-733A-BLMD, which has been discontinued but some outlets have a few left for around $450. It would seem to have everything I need. I assume it works as a crossband repeater, which I want. However, I notice it cannot receive on VHF and UHF at the same time. I wonder how well owners like this rig. Is the new TM-V7A that much different?

I was also considering the Yaesu FT-8000R. It has extendend receive which the Kenwood does not (and more expensive). I am kind of intrigued by the extended receive (can the celluar freq. be opened up?) though I noticed that QST said the sensitivity up there was not all that good. I wonder how that works out in actual practice (maybe all these rigs with extended receive suffer from poor sensitivity?). Any comments on these rigs or other dualbanders.

Thanks,

Bill Combs

Yes, I heard that it's an acid type of chemical and can be VERY
corrosive to more then just electronics. This is even worse then
the damaged caused by smoking.

If you own a cat you should either get rid of your cat or your equipment
because they don't mix.

Hello fellow WEFAX FAX SSTV RTTY enthusiasts.

I've just updated by FTV program - current release is 0.98f
Download it from http://www.geocities.com/SiliconValley/2504

For the first time, I have released the software as full-featured
shareware.

FTV brings innovative digital signal processing and analysis techniques to
your multi-media PC. It can be used to receive images from Weather
Satellites and Terrestrial Facsimile Stations, text transmissions from
radio telex services, as well as Amateur Radio FAX, SSTV and RTTY signals.
It can also transmit Amateur Radio FAX and SSTV (Slow Scan Television). No
external hardware, other than a radio, is required, as all the necessary
signal processing is implemented in software.

FTV uses a SoundCard to decode:-
WEFAX weather photos from weather satellites
FAX wirephotos and meteorological maps (Supports FAX transmission)
SSTV pictures in monochrome and colour (Supports SSTV and SSTV COLOUR
transmission)
Baudot text (RTTY)

Here is a run down of soem of its hot features:

(1) It keeps the demodulated signal in memory, so that the signal can be
analysed again at a different keying rate or polarity! Garbage can be
resampled on the fly, which means that minutes of received signals decoded
at the wrong baud rate or keying polarity are recovered, on the fly, while
still receiving.

(2) Keying rate and polarity are analysed automatically - standard baud
rates are automatically set following analysis (assuming you have
calibrated your system as described in the documentation file
'readme.txt').

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

Take a look at my web site for futher details, at:
http://www.geocities.com/SiliconValley/2504

What can I say ? Try it, it's free, and may you have as much fun as I am
having...
And, keep me posted... If you have suggestions, you have got to let me

know!

73's from Brian.

I have for sale the following:

Kenwood TS-830s with two optional CW filters....$600
Kenwood VFO-230.....$175
Package deal.....$750 AND I'll throw in a
Shure 444 desk mike.

All equipment is in excellent electrical and cosmetic condition,
operation and service manuals included. Non-smoker. Prices are firm,
you ship COD or postal money order (or pick up in central CA).

I'd prefer the package deal, so I'll save all replies in the order
received for a couple of days before splitting it up.

For further information, send email.

Hello,

I need to modify the UHF side of my mobile rig to receive 450 - 470 mhz.
Where can I get reliable instructions to accomplish this modification.
Please e mail them to me if you have them, I would be most appreciative.

>> operations, and the rest auctioned. And, the FCC will use the
>> now-vacated NTSC assignments to "compact" the spectrum assigned to TV.

Here's what I don't understand. Why not give channels 66-69 to
public safety agencies since that dovetails nicely with the existing use
that the old channels 70-83 went to some time in the late seventies.

It would also seem to me that we should make a clean break with
the past and convert all frequencies in the present 12 VHF channels to
expansions of the present VHF low and VHF high bands for public service,
amateur, and commercial service.

There might be room in there also for digital audio
broadcasting. That's my $.02

>Please post a few of the Win95 software packages locations so I can look
>at them. I am just getting back into radio after a perion of QRT.
~~~~~~
Ed,

The K2TL homepage: http://members.aol.com/jkktl/ham.htm has the
program WxSat which uses your soundcard to decode the Polar Orbiters
and Meteosats then displays the WAV file as a BMP. An excellent
compilation of SSTV programs is found at http://www.qsl.net/n9ngf/
Some of the programs are DOS and some are Win95. There are
descriptions and shareware to be downloaded directly from the site.
I'd have to do a search to find some other sources and my
ISP server is running s..l..ooo..ww.. tonight. Just search using
Webcrawler or Yahoo to find SSTV software, RTTY software, and
Wxsat links.

From: tnic <tnic@IDT.NET>
Message-ID: <5ihnt0$hbq@nnrp3.farm.idt.net>
Source record: 178115

I have the clip on speaker mike. Its pretty good BUT
I prefer the ear piece lapel mike gizmo.

Its not nearley as rugged as the speaker mike,

Its a single wire with an ear phone and hanging a little further down the wire is a dime sized mike with a PTT on it.

The advantage is you don hve to have the speaker blaring at you over the car noise or other noise. It also is more private. Though you may seem more like secret service than police!

To talk you just grab the little hanging mike and press the ptt. it works fine from my bicylce which is usually too noisy to hear the speaker unless its way up.

735. Lowered Price. Yaesu FT-890 AT Compact HF Rig $825

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-10 00:00:00 UTC
From: don.peaslee@ncn.net
Message-ID: <334c66de.53066125@news.netins.net>
Source record: 178116

Lowered Price! Yaesu FT-890 AT Compact HF Rig with built in Automatic Tuner. Extremely light use. Approximately 30 total contacts is total usage. In perfect shape, like brand new with all the original boxes and packing.

100 watts power on all HF bands. IF shift and IF notch filter. Four microprocessors provide the easiest possible control interface. Two independent VFOs for each band (20 total) hold their own frequencies and modes as well as clarifier offsets and repeater shifts. 32 memories store data for the VFOs giving a total of 84 independent sets of frequency, mode and other selections. Noise blanker, all mode squelch, 4 function multimeter, and AF speech compressor with adjustable IF passband shift. Iambic memory keyer for CW with dot-dash memory.

Top panel heatsink allows this radio to run cool at all times and with an internally switched fan, it allows full transmitter output without any rear panel protrusions.

Add CAT control to hook this fine radio up to your computer.

Perfect shape and like brand new. $825.00, buyer to pay shipping.

No, Pro409 does not work on lungs but I doubt that you could sniff enough latent tar from a radio to fill your lungs, but hey, some people have stranger hobbies.

With all of this talk of tobacco and cats, you aren't cleaning radios that you purchase by licking them are you?

Please don't tell my SW4A that. It has been slept on for over 20 years and has not failed. And the Mac amp has been glowing away for nearly 30 years with just one tube change. Maybe it was a different thread (the one about inventing stuff) but they made this neat thing called a vacuum cleaner that eliminates that little hair problem.

Housekeeping is not the cats problem.

I just had to post my own experiences gathered over two decades of doing business with HRO's Southern California locations.

Every time I go in there, unless I announce my intention to spend hundreds of dollars, I am treated on a low-priority zero courtesy basis. They simply have no time to bother with someone who is merely buying the new repeater directory, or whatever. Once, I purchased the ARRL Antenna Book, brought it home, found the floppy disk with the software on it was missing, and drove all the way back only to be accused (in full voice) of stealing it! Can you imagine this? The condescending manner in which the manager "listened" to my complaint was pitiful. No, the customer is definitely always WRONG at Ham Radio Outlet.

I challenge any ham in SoCal to walk in on a busy Saturday, stand around politely waiting to be served, and inquire about a relatively inexpensive item. See what happens. You get faster, more courteous service at a self-serve gas station, for heaven's sake.

The sad footnote to this story is that, in the 70s when Henry Radio was the established (read 'arrogant') ham store in town, an upstart shop opened up down the street, offering customer service and friendly hams behind the counter. We were very excited, hopeful. The company? HRO... And we all know what eventually happened to Henry Radio...

I have a used Connect Systems CS-900 simplex autopatch for sale.
It is about 3 years old and works fine.
You hook it up to the mic and speaker jacks of your radio, and connect a
telephone line to it. Then you can make phone calls from your radio in
the car, or an HT.
The price is $200 firm + $10 shipping.
If you are near Los Angeles, you can come pick it up.

HRO is a big ripoff in selling radio accessories.
A recent example: I bought an Icom FL-101 cw filter. HRO
price was 99.95. Everyone else had them for sale for about 95 bucks or
less, (but were out of stock). I can live with paying
a little more when it means getting exactly what I want, WHEN
I want it. But the kicker...those S.O.B.'s at HRO charged me
$20 for shipping and handling -- for a damn CW filter. The entire
filter, including box, extra packing, shipping, etc should not
have been more than 3 bucks tops -- the box it came in was 2 inches by
3 inches, and less than an inch thick. I was angry as hell when I
got the mastercard bill for 119.95 (99.95 for the filter, 20
bucks for shipping).

No doubt, a ripoff. I'll never buy another thing from HRO.

I am considering selling my Round Emblem Collins 75S-3C which is in A+ superb condition. It's just been recently aligned, and includes the 2.1 kHz SSB and 500 Hz CW filters. It is a superior example of the last S-Line receiver built by Collins Radio. I'm taking email offers due to the fact that I do not know the market value of units like this one. If you buy it, you cannot be disappointed because of its extraordinary electrical and physical condition. Will consider trades including Rockwell Collins KWM-2A - 312B-5 or Collins KWM-380. I found that the GE silicone glue (I used the bathroom caulking and the general purpose type. Other types should work as well.) worked very well for mounting the rear view mirror. I used the special glue for the mirror from an automotive shop once and failed. I used the GE glue on three different cars and had not have any failure during my ownership of the cars.

> Dogs drool, but cats rule!

Right on, Ted! I've got 3 cats myself and have never had a problem.
I just remember to keep the door closed at all times (whether I'm
operating or not). One of the cats (a long hair) hears the voices
coming from the speaker and sometimes scratches on the door for me to
let her in. I let her in, she sits on the florr for a couple of
minutes, listens to the traffic, makes a few cat comments, and leaves.
My shack is nothing fancy (basement location, walled-off with a 2x4
stud wall covered on the outside with paneling, door is paneling
reinforced with 2x4's), and the operating desk is an old hollow-core
door on a frame of pressure-treated 2x4's. Cheap, quick, and it
work's!
BTW, had a dog (dachshund), but it died. Was I happy the day it went
toes-up. Got another cat to replace the dog.

I prefer the hardware mod because if I should have to reset the radio
I would then hate to be away from my computer and lose the mod until
I can reload the file. Thye hardware mos was not that hard and is
permanant.

To all of you radio amateurs out there ! A plea for help from
someone bogged down at the moment.
I have obtained the wxsat software which works perfectly with
prepared .wav or .bmp files. I have also obtained a sound card (Idema
sound card series Schubert which is a 16bit ES1868 card) This has been
set up with port 220H, interrupt 10 [to avoid clashes with network card
set to 5] and DMA 1. It is set for wave file processing at 11.025kHz,
mono, 8 bit
No matter how I try I cannot produce a .wav file from the system
even though the input (into the audio plug on the card) produces sound
from the monitor speakers. I can also play CD's via the CD player,
but....NO .wav file at all. I have tried live signals, and recorded
signals all to no avail. I have even tried to contact ESS technologies
in the States by e-mail but have had the message returned with this
address unknown. So at the moment I am having to suck my thumb, mainly
since I am neither a radio amateur or a computer "literate". The
setting up of the system was done for me as I am essentially an amateur
climatologist (retired).
So, can any of you boffins out there throw any light on my
problems and even suggest what I can do to get a .wav signal. Have I
got a duff sound card ??
Thanks for any help or guidance,

Mark and any who would misunderstand his position in this meowling,

The attributed qoute should make it clear that Mark has the capacity
to follow the this once humorous thread and I apologize profusely for
any suggestion otherwise that may be attributed to me.

Before a simple lampoon degenerates to mass caterwauling, it might
^^^
be prudent to offer some stuff up for swap.

4-1000 new, original box destroyed by water
4-1000 pull, good for testing
4-1000 socket, used good shape
4-1000 filament transformet, new and correct for single tube

all are smoke, cat, rat, snake, insecticide, meat, fur, CB,
airforce, cult, bgh, o'possum, and humor free.

all the above to sell for $200 plus shipping from Atlanta
or swap for Geloso gear or excellent ICIR 200 transceiver.

Hint: A pair of microwave oven trransformers will get you the HV
to run a 4-1000 they can be found on the roadside.

767. YAESU FP-800 POWER SUPPLY << your input, please >>

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-10 00:00:00 UTC
From: bjacob@iofc.com
Message-ID: <860696000.18316@dejanews.com>
Source record: 178148

I originally posted to this newsgroup with a question about some noise problems I was experiencing with the ASTRON switching and linear power supplies. For those of you who may not have seen the original posting, here is a recap:

When using the Astron SS-30 and (later) the RS-35M with my FT-900/CAT, I experienced transient or switching noise that made copying weak signals on 160 and 80 nearly impossible. Some of this noise appeared every 38 Khz or so. This noise problem vanished when I switched over to a 12 volt automotive storage battery. There were no computers or television sets involved with this noise problem.

I would like to say thanks to all who responded to my original posting. The responses ran about 50 / 50 "for" or "against" the ASTRON supplies.

A NEW APPROACH --

Now I am looking for input from those of you who are currently using or have used the YAESU FP-800 power supply. Although this supply is quite a bit more expensive than the equivalent ASTRON, I am wondering whether it, too, is noisy. I am particularly interested in your experiences with this supply when operating 160 meters and 80 meters HF. If you have had some experiences with this supply (positive or negative) I would certainly welcome your input and feedback on this subject.

I own both the 733 and the TMV7A Kenwoods. Forget the 733 its a pain to use, the button are too small and the screen display characters are too small to read while driving. The programming is impossible without the manual.

The TMV7A is much much easier to use. You dont need the manual and the display is easy to read even while driving. The Buttons are large enough to be used by normal sized American hands. Its not a perfect radio but I looked at many and found this one to be better *for me* than the others. Alpha memory names makes it practical to put in loads of repeater memories and still know what repeater your blabing on.

>
> When I hook it up in the car it only pumps 35 watts on 2m and 25 on 440.

Is the engine running? If not, finals only get 12VDC. Most 12v power
supplies
running off of 110v AC mains supply 13.8V and well regulated. 1.8v less
is about
13% so 35 instead of 45 and 25 instead of 30 is resonable. Try your
power level
readings with the engine runnung at fast idle speed and I think the
numbers
will come up some.

Good luck

I have a Kenwood TR-7500 2m mobile transceiver. Is here any mods out for this radio like extended frequency, home made tone board, etc?

It takes MANY months to do all the layout for a catalog, and there is usually a cutoff date for changing information so they can get it printed.

By the time YOU get a catlog, the information can be as much as 12 months out of date depending on the catalog's production cycle. In today's dynamic marketplace, a catalog cannot hope to compete with an instantly upgradable web page.

Even HRO doesn't use their own catalog to check or confirm CURRENT pricing, they use a computer database!

I want to know why you neglected to spell "preference" correctly.
Does it mean something different to you spelled in this fashion?

Get a life, there are more important things going on than to be ANAL
about someone else's typing skills on an informal forum such as this.

In my experience with HRO, I've found that if you bring an AES catalog with you, they will discount the price on the spot to match AES. I can't underdstand why HAMs must go through these shinanigans, especialy if they have that much margin in the price. My advice is to get even with the SOB's and bring the AES catalog with you next time. If they still treat you linke dirt, buy it from AES!

785. Re: TS-570D Design Problems ???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-10 00:00:00 UTC
From: Kenwood Customer Care <cuyeda@ix.netcom.com>
Message-ID: <334D5F0D.119A@ix.netcom.com>
Source record: 178166

It is unfortunate that this message was not elaborated. I am not sure what kind of problem Gary has but, I can tell you that Kenwood has had a couple of reports about the TS-570D turning ON when the power supply is turned on. The Power On switch is not a mechanical switch and therefore gets fooled into being turned on.

Even when the switch is not turned on intentionally. Kenwood has found that in a couple of (specific cases) situations the lithium battery may be depleted. This situation is being looked at very closely to determine if there is genuine concern. If there is anyone who has a similar occurence, please call Kenwood's customer service.

I was a service technician with Oklahoma State University's
Audio Visual center for 7 years and think that if I were going to write
a chapter in one of those servivalist garilla manuals as to how to
stealthily destroy electronic equipment, I would suggest that the
saboteur should take up heavy smoking around the gear to be destroyed.
The residue is a little sticky so dust will stay firmly attached to any
surface in contact with the smoke and the smoke will leak in to the
smallestholes and coat whatever lies inside. It always seemed to me
that equipment that had had the smoke treatment failed in more unusual
ways and was harder to repair than similar devices that hadn't been
fumigated with tobacco smoke. Besides, it stunk also.

i'd hold that anyone willing to sell radio accessories is taking a big gamble.
it's a low volume, high markup game.

> A recent example: I bought an Icom FL-101 cw filter. HRO
> price was 99.95. Everyone else had them for sale for about 95 bucks or
> less, (but were out of stock).

i have 'em for $2 each but i'm always out of stock. if they don't have any
they can say they'll have 'em for any arbitrary price and then tell you the
"right" price later...just to keep you from buying else where until they can
get an order in.

> I want it. But the kicker...those S.O.B.'s at HRO charged me
> $20 for shipping and handling -- for a damn CW filter. The entire

what way was the package sent? parcel post or fed ex or ups red?
priority mail
would be like $3...i bet they have to either fab a box or come up with the stuffing to put the small box in a larger box. wouldn't do to have a filter arrive broken..

Due to a special offer from BMG a few years ago, i get offered music CDs for free during the year, but i have to pay S/H..so it's about $4 a disc.

the real lesson is to get the delivered price when doing mail order so they tell you what they'll be adding on for the guy who makes sure it's in the day's outbound shipments.

Source record: 178175

I have an FT-415 I sent in to get the lithium battery replaced. ($64! Ouch!) Now it can't do tone encoding. Anyone know if there is a mod I should check?

As a side note, I removed the decode board for the 415 and placed in my FT-3000M. It still encoded fine after that, but it hasn't since coming back from Yaesu service.

I'd also recommend against ever getting a handheld whose lithium battery requires a trip to the shop to get replaced.

796. SWRMeters, Why 20/200W???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-10 00:00:00 UTC
From: Brian <burkefam@icss.net>
Message-ID: <334DC444.5B0B@icss.net>
Source record: 178177

Why is it that most of the manufacturers of power/swr meters are selling us equipment in the 20/200(/2000) watt range? When was the last time you saw a 20 watt handheld or a 20 watt mobile radio?
If your handheld does 2 to 5 watts on high power, your needle in the 20W setting is just barely moving. When testing your mobile radio, after first bending the needle on the 20 watt setting, you reset the meter to 200 watts scale, and same thing.
Of course, the real market is probably the million or so Japanese 10 watt No Code HF licencees, and 10 watts being mid-scale for these meters, is just abought right.
Hmmm. Just a thought.

800. Kenwood TM-V7A/E Modifications !!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-10 00:00:00 UTC
From: Paul Nicolay <paul_nicolay@merck.com>
Message-ID: <01bc4589$49b3fda0$6e036536@merck.com>
Source record: 178181

Following modifications are possible:

1. Wide band reception (Conversion A) - K destinations outside 800Mhz band support
2. Cross band repeater (Conversion A and B) - Completed with K destination measures
3. Page answer back (Conversion A and B) - Completed with K destination measures
4. DTMF remote - Operates even without conversion, but some items function when Conversion A and B are made.

Conversion location:
Remove the power cord from the main unit, remove the upper/lower case, flip down the panel, then operate.

Factory setting destination jumper table
Bit Destination (K, M, E)
3 R542 (W501) O X O
2 R543 (W502) O X O
1 R544 O X X
0 R546 O X O

(O: Jumper, X: No jumper)

Conversion A - Reception wide band (already dealt with for M destinations)
E destinations - Eliminates mounted chip jumper resistor R546 (0 Ohm)
K destinations - Cuts the mounted jumper wire (W501)
Conversion B - Repeater/answer back (Already dealt with for K destinations)
Chip jumper resistor 0 Ohm added (R92-0670-05) - The chip removed in Conversion A can be used in Conversion B. When adding or eliminating the chip jumper resistor, be careful not to peel off any of the printed cicuit pattern and not to harm any other parts.

Message-ID: <334D6B41.12E6@n-link.com>
Source record: 178183

Two days ago I called Ten Tec to order on of their SWR/Wattmeter kits. The guy on the other end of the phone explained that they were on back order and would not be available again for two weeks. He said that if I wanted he would take my order and ship one to me as soon as it was available, or I could simply wait and call them back in a few weeks. I figured I had nothing to lose by ordering one and waiting.

Fifteen minutes ago the UPS guy rings my doorbell and hands me a package from Ten Tec with my kit in it!

Damn, now instead of mowing the lawn I'll have to spend Saturday putting this thing together and trying it out. Thanks Ten Tec, for screwing up my weekend! ;-)

Anyone else out there ever have a problem with Ten Tec not delivering as scheduled? Or not charging extra for express delivery?

They keep treating customers like this they might have to stay in business.

Pardon me, but I don't believe they make Sabers any longer. Haven't for years.

Astros are the replacement. I know several places that wanted Sabers but had to fork over the $3000+ for an Astro 1. No other choice if you want to use all the same chargers, batterys, holsters and extras.

Oh well.

MattD.

807. Kenwood TS140S Transmit everywhere / Dial speed?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-10 00:00:00 UTC
From: Andreas Triller <la0058@stud.uni-wuppertal.de>
Message-ID: <334C448C.9A6F2AE@stud.uni-wuppertal.de>
Source record: 178258

Hello all,

my father is an active OM (DL5EBO), but he doesn't have an EMail-adress,
so I post this question for him:
Is it possible (and how) to make a change to a Kenwood TS140S so that it
will send on all the frequencies where you can receive?
(It's not about pirate transmissions, just to be able to cheat the
antenna-tuner in abnormal wheather conditions it would be good to tune
the antenna a bit off the band).

Another interesting thing would be to set the speed of the
frequency-knob to 1/10.
The bigger Kenwood tranceivers allow this via a switsch, perhaps this is
also possible in the 140 and somebody knows where to connect an external
switch?

Thanks a lot for all answers!

Andreas Triller, Germany

808. 35 watts in car 50 at home why?

Newsgroup: rec.radio.amateur.equipment

From: tnic <tnic@IDT.NET>
Message-ID: <5ihi21$1va@nnrp2.farm.idt.net>
Source record: 178259

I am using a Kenwoood TMV7A. Its a nice radio I like it.

BUT when I hook it up to my roof antenna at home and a power supply it pumps about 45 watts on 2M and 30 on 440.

When I hook it up in the car it only pumps 35 watts on 2m and 25 on 440.

I am powering the radio directly from the car battery.

I tried a Mag mount and a trunk mount and 2 antennas. Same readings.

Any opinions why?

Thanks & 73

This KENWOOD rig is BEAUTIFUL!
Very clean model. Everything works great!

Comes with Hand mic, desk mike, DC power cord,
Manual.

Mind you this is the 200 WATT version and not
the 100 WATT.
Asking price is $420 (I pay shipping)
Reason for getting rid of this rig is....
I NEED TO PAY MY INSURANCE! DOH!

Don't worry, I have a 2 meter mobile to keep me company.

If interested please e'mail me at beaudrlt@polarnet.com

>If you have any hint, e-mail me at evincent@mediom.qc.ca

Most likely a bad job of trying to modify the radio. Seen many
attenpts where the person doing the modification recreated the
Japanese diode matrix which limits VHF transmit to 144-146 Mhz.

812. FT-8000r problem? Scanning beep mixed with TX audio.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-11 00:00:00 UTC
From: David Ho <davidho@one.net>
Message-ID: <Pine.LNX.3.95.970411085228.11993A-100000@shell.one.net>
Source record: 178064

All FT-8000R OM's:

I don't know if this is an undocumented feature or a bug... Try this and please tell me what you think.

Transmit on your main-band and scan on your sub-band. When a signal appears on the sub-band, the "double beep" tone comes thru both the speaker *AND* the TX signal!

I had verified with another receiver that it's not the condensor mic piece that picked up the beep tone; instead, it's mixed with the TX audio. Loud and clear "beep-beep" when you talk! I use seperate speakers for each band; moreover, the beep tone comes out both speakers but not for the originating band.

Should I ship the rig back to Yaesu for a "Fix", if it is indeed a problem? Or am I hallucinating an undocumented feature as a problem?

It bugs me because it makes me telling people on a wide area repeater that I am doing heavy scanning while I am transmitting. Yeah every ham scans and so what? But others don't need to know, plus it affects my TX signal and that make it a problem for me.

Input! Input! Input! Thanks in advance.

Very best 73!

FWIW, Maryville (no "s") is just south of Knoxville, so hams in that
area might be able to help.

Collection efforts have not been mentioned -- has contact been made
since receipt of the equipment?

We've had major problems with the USPS here in Tennessee within the
past year, including mail being stolen and poor delivery. I'm not
saying Ms. Driggers is without blame, just ensure all the options
are exhausted before blame is placed. I'm sure, in this case, the
options probably have been exhausted.

COD/money order first -- general rule. Sorry I couldn't be more
help.

The 733 is a V/U V/V U/U V/- -/U -/- radio meaning that you can turn either side of the radio on or off, you can listen to either band on either side and you can listen to the same band on both sides. Whatever you want to do.

The only drawback is reduced sensitivity when for example listening to vhf on the uhf side (maybe 1 or 2 db loss in receive capability). The radio reroutes the signal pathes internally such that this can be done. You can transmit on VHF from the UHF side and vice-versa.

The radio take the signals from the proper antenna when doing the above. It doesn't try to transmit on a uhf antenna while on the uhf side.

I am very happy with my dealings with HRO. I surf their web site and use the search engine for pricing. Other comments in this thread about out of date pricing in printed catalogs are right on.

I purchased an Icom IC-281H in January when many dealers were closing them out. I got an "open box" unit (store demo) for $289.99 when the lowest price from any other dealer was $369 or so; most $379. I sprung for the CTCSS decode unit and sales tax, they paid UPS shipping.

The unit was represented to me as having "very minor scratches" on the display. It was in reality, near perfect. (You have to be at just the right angle to see anything. Never see it in use in the car.) Unit came with all paperwork, and a well-browsed manual (of which I had been fore-warned.) Only problem was no remote-function decal for the mic.

Called back, and they had Icom send me the mic decal within a week.

All very positive. I got my unit with CTCSS decode, tax, and shipping for the typical closeout price of the radio alone. I've seen this radio used on rec.radio.swap for more than I paid new. Good response to my problems. What can I say? I'll shop HRO again.

822. Icom 251A external control?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-11 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <5ilp00$ej@coranto.ucs.mun.ca>
Source record: 178074

The Icom IC 251A can be controlled externally from a back connector
of the radio. Did Icom make any products to use this connector besides
the IC-EX1 or IC-EX2 which seem to be just an extention terminal (what
is this?).

The IC-251A is a 2m all mode and looks just like the IC-211 except
it's a newer version. Here's the order they were made and any external
devices or standards made by Icom for that radio in the order they
were made.

Icom IC-211 2m all mode - Had the RM-2 as an external control unit.
Icom IC-251A 2m all mode - Note in manual says IC-RM2/3 does not function
with the IC-251A/E.
Icom IC-271A/H 2m all mode - (UX-14 & CT-17 ?) CI-IV command standard.
Icom IC-275A/H latest 2m all mode - CT-17 and CI-V command standard.

Please note Icom made other 2m all mode transceivers but the ones above
replaced each other as models.

The Icom 251 is the only model that I don't know if Icom made any
external control devices. Can someone help me out? They must have made
something for it because all the units before it or after it did have
something and they made the IC-EX1 and IC-EX2 that connects to this
radio via the acc. jack.

BTW> I am looking for any repair info or ACCESSORY connector control
data/signals on the Icom IC-701 HF rig. The ACCESSORY connector is the
same as on the Icom IC211 or IC245. The data/signal info I need has
to do with information the IC-RM2 control unit is sending to control
the frequency, band, etc of the radio. I would like like to build a
computer interface so a IBM computer can control it instead of the
RM2 unit.

At one time Icom advertised of sending anyone who requested it
PIA (Parallel Interface Adaptor) spec's. I requested 17 years
after the fact from Icom but they don't keep info on models
that old.

Anyone get this info while Icom still had it back in 1980 for the
IC-701?

Did you call Ten-Tec? They are usually happy to discuss their
equipment. If it's any help, the Paragon (original) had a jumper that
needed to be cut. It was clearly marked in the schematic and stenciled
"GEN" on the board.

I also own both and have to disagree. While the PM button should be moved away from the power button (ARG!!!) I find that the 733 has a better receiver than the TM-V7a. But that the split PL tones (one tx another rx) is nice too. I miss the mute in the V7 (not there) as I do the cloning ability (also not there). And I am one of those rare (I guess) folks that don't use dual band antennas in the car, because I don't want diplexor losses, but with the V7 you have no choice (or you can run the diplexor backwards to two antennas, not really a choice). So I prefer to have two antenna ports (let the user decide what they want).

Since I own several other Kenwoods I haven't had a problem with the programming, they are failry consistent (except now the V7 has some new twists, you can only do some things via the menu setup or power on for other things that were button commands before).

> The TMV7A is much much easier to use. You dont need the manual and the

> and still know what repeater your blabing on.

The display is generally nicer, but I still prefer the light background and black letters/number. The buttons ARE large, but again the PM button is right under the (raised) power button. And having to use the menu or do a power on command when you want to do things like enable cross band repeating is a pain.

Yes, it can do both and act as the cross band repeater (VERY useful) and
the mute is also very convenient.

I'd suggest that at the prices they are being sold for, that the 733 is
a better deal, but the V7 isn't a bad choice either if you have the
dollars. More memory, alpha display and some other things make it a
very nice radio.

Hello all,

Just for the heck of it I'll be monitoring 50.400 "AM" Sat and Sunday
from 1-2 pm and 5-6 pm West coast time.

Hope to hear someone out there.

Also I have made a web page for 50mhz am.
If anyone has a qso e-mail me the info and I'll post it on the page and
we can watch it grow.

http://www.geocities.com/Hollywood/5860/50am.html

Any questions e-mail me at booth@pactitle.com

Have fun!!!!!!

You dont have to use a power on sequence for dual band repeat or locked band repeat.

With the mic control on press D C to enable locked repeat. You can turn it on with an HT remotely. Check page 77 of the manual for a full description of the features you can do remotly.

Keep trying! GeoCities has evidently been having some serious problems lately. Last night I couldn't even get to my own page the first time I tried. The problem seemed to come and go every few minutes, or less.

From: Tom McDermott <mcdermot@aud.alcatel.com>
Message-ID: <334E833D.167EB0E7@aud.alcatel.com>
Source record: 178084

I have just acquired a Yaesu FT-1000MP. It has what appears to be an 8-pin DIN connector for providing transistor-level keying of a linear amplifier. However, the 8-pin DIN I purchased at Radio Shack does not fit! Two of the pins are in slightly different locations.

Is this connector special? Are there two different standards for 8-pin DIN connectors? Are these strange connectors available somewhere?

>>>>>>>>>>>>>>>>>>>>>> <<<<<<<<<<<<<<<<<<<<<<

I would bet it's simply a matter of the voltage getting to the radio.
However, consider:

2-meters: 10log(35/45) = -1.09 dB
440: 10 log(25/30) = -0.79 dB

If I were doing EME, I'd be concerned. Since I'm not, I wouldn't be too
concerned. I doubt if a drop of 1 dB in output power is worth worrying
about! I doubt if the repeaters can even detect a drop of 1 dB on an FM
signal.

I need the manual and schematic for the Heathkit HP-23 power supply.

Note that this is NOT the same as the HP-23A, -23B, and -23C. The
HP-23 is an early model and it is different than the later models.

I already have the manuals for the HP-23A and HP-23B supplies.

If you have this manual, may I borrow it and make a copy? I will
pay all postage costs, treat it carefully, and return it quickly.

Thanks!
Dean K5DH

I have no experience with the TMV7A but I am quite happy with my 733A.
I have it remote mounted in the trunk with the control head on the dash
in my Ford Taurus. Performance is good, my only complaints are that the
2 metre front end is quite wide open and intermode can be a problem, and
if you are not carefull with button pushs you can put the radio in a
mode that will require the manual to rescue.

I have not tried the 9600 baud packet port.

I have had it install as a mobile since the fall of 1994 with **no**
problems, including starting up cold in the Canadian winter at -30C. I
would not hesitate to recommend one.

There is indeed another plug that is available from Kenwood and Yaesu.
The Kenwood part # is E07-0851-05 and I got them from East Coast parts.
They take Visa and their PH # is 1-516-483-5742. The last price was
$5.23 each in 1994.

Consider:

2-meters: 10log(35/45) = -1.09 dB
440: 10log(25/30) = -0.79 dB

If you would doing EME, I'd be concerned. Since you are not, why should
1 dB make a difference? I doubt if the repeaters can detect a 1 dB drop
in an FM signal.

I'm afraid not, Clint. You edited the rest of the comment, that being that I dont mind paying more if it means getting what I want when I want it.

> A mere 5% difference in price, and it's IN STOCK - and he's moaning.

You misread it, pal. I said the price itself was fine. I was complaining about $20 for shipping. HRO has a strange policy, I found out later; shipping is free ONLY for anything over $100 bucks. So, they charge 99.95 for the filter, and 20 bucks for shipping, which is total bullshit. The filter was shipped from Aneheim CA, to Dallas, TX, by UPS brown. Should NOT have been 20 bucks -- more like 3 or 4 tops.

> And he lives overseas, too...and bitches about a reasonable shipping
> fee. WHICH HE WOULD HAVE BEEN QUOTED ON THE PHONE, if he had asked.

Sorry, but in 11+ years as a ham, I've never dealt with a ham outfit that charged such rediculous shipping fees for a small item; I bought a complete C-line from a guy in CA and the thing only ran 25 bucks to ship to Texas. Now, a 1/4 ounce CW filter in a 1 x 2 x 3 inch box is crazy to charge 20 bucks shipping; I could have sent it FEDEX next day 10AM delivery for less. This is slime as far as I'm concerned.

Burt Fisher, world renowned crap bag, Clinton lover, is at it
again. Burt, how about siting a source for your article? I know
you didn't write it all yourself. Fact is, that copyrighted
material is not supposed to be modified and you are supposed to
cite the source!

As far as LMDS, it operates in 28-30 GHz range. It works in
full rain and it has been working in Brighton Beach NY for
the last 5 years as a pilot. I worked on it for 4 years and
they do not need towers, rooftops work fine! 49 channels
in 20 MHz HDTV channels. Recieve antenna is a 6" square flat
panel. See Cellularvision.com for more details.

As far as seizing ham towers, who is kidding who? There
would be nothing of the sort. I feel like Burt might have
edited that in there. There would be no seizure.
Why add to the article Burt? Does it serve your purpose?
Your purpose was to make it sound like they are coming for
all amateur spectrum. Not yet! The fact about towers and
zoning is something I have first hand experience in. I have
built over 100 towers throughout the Northeast. You can
still construct them, but you might have to allow co-location
which is when several carriers locate on one tower.

Burt, you really are scum, just like that scum that lives
in the Whitehouse. No wonder why you would put up a picture
posing with him on your webpage! You are both twisted liars!

FTS-22

> If there is a CTCSS decode module, does it allow for efficient
> scanning? Right now I have an Alinco DR-600T in my truck, and although
> it works fine, it will stop on active channels even if the tone is
> incorrect.

Welcome to the club!! I've got a DJF-1T handie-talkie and although I like it a lot Alinco really screwed up on the tone squelch scan function. Don't worry about it with the FT-8000 though. It slows down very slightly when it encounters an emission without the tone, but it's smart enough to keep on scanning if the correct tone isn't present. And, it scans fairly rapidly besides! I'm impressed.

> I have a FT-50R with the FTT-12 keypad and it interogates
> CTCSS during scan and will not stop on a channel if the CTCSS doesn't
> match. I scan many different repeaters in the commercial bands, and
> need a radio that will continue scanning if the entered tone isn't
> active.

The Ontario Provincial Police utilize digital transmissions on various frequencies which cease when voice communications with CTCSS tone are present ... and the FT-8000 works like a charm on this! No problem here!

> What extra features do you get from the ADMS-2C software? Does it
> allow for limited alphanumeric channel tags?

I bought the ADMS-2C and wouldn't be without it if you change your listening habits at all or travel a bit. You can identify channels with a comment for each one but you can't add alphanumeric tags which appear on the display in the radio. It's nice when you print out your memory allocations though.

> That should just about do it for now, I've been looking at this radio
> for a while, and it looks like my next purchase. Thank you in advance
> for any and all replies.

Well, there are a few minor things I'm not crazy about with this unit but you can't have everything for this price ... and all things considered I think it's a pretty terrific little rig!!! I sure wouldn't trade mine.

As for cellular ... many ads say it can't be unblocked but it can. However, it's really not worth the effort since the image / spurious rejection outside the ham bands is pretty poor to say the least. Maybe it was designed this way intentionally (I mean ... who would ever want to listen to DMEs?). If you search in the DME / TACAN band between 1150 MHz and 1195 MHz you'll receive cellular transmissions with the same sensitivity as you will between 869 and 896 MHz. I admit it's nice to have the display read the fundamental frequency but it might not be worth taking a chance on voiding the warranty etc. just for this.

The smart search feature is the greatest thing since sliced bread. Every radio on the market should have this neat feature! And the memory for the smart search is non-volatile, which I just discovered recently. For example, you can set the band limits at 1150 and 1195 MHz ... set the RF squelch threshold at let's say 4 S-units ... invoke the smart search feature at continuous search ... and the radio with fill up the 50 (gravy) smart search non-volatile memory channels with the strongest cellular sites in the vicinity! Then all you have to do is hit the scan button and it'll scan these memories just as it would the main memory channels. Both the sub band and main band have 50 of these smart search memories available. And if you scan the ham bands it'll store the standard split repeater offsets to boot! I guess you can tell I'm pretty thrilled with mine. Hopefully the competition will take a hard look at this really useful feature.

Intermod / crossmod rejection is not the best but not the worst either. Like I said ... you can't have everything for the price of this unit ... this is a really nice rig!!! BUT ... if your requirements are more toward VHF only with super I/M rejection ... you'll be disappointed.

860. FT-8000R Receives Cellular!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-11 00:00:00 UTC
From: aw560@FreeNet.Carleton.CA
Message-ID: <5ik1vg$16h@freenet-news.carleton.ca>
Source record: 178189

A month ago when I purchased mine I was asking whether the cellular band could be unblocked, as I had heard conflicting information on this. Well, it can ... but it isn't really necessary.

I discovered the radio's image / spurious rejection is the pits outside the ham bands, which is bad in some respects but good in others (since I don't plan to listen to DMEs anyway). If you search in the DME / TACAN band from 1150 to 1195 MHz you'll find the radio will receive cellular transmissions with the same sensitivity as it will at the fundamental frequency assignments after the mod is done. I had the mod done anyway thinking the sensitivity would at least be improved, but it truly isn't. And it is fairly sensitive!

A suggestion is to use the Smart Search feature as follows: Set the upper and lower band limits at 1150 and 1195 MHz. Set the RF-Squelch to the 4 S-unit threshold (unless you're far from cell sites) and the smart search for continuous scan (as opposed to single sweep). Start the smart search and it'll store a maximum of 50 of the strongest cell sites in your area in the non volatile memories set aside specifically for this feature. Then all you have to do to listen to cellular is recall the smart search memory mode, hit the normal scan button, and you're in business! And this without wasting any of the 55 main UHF memory allocations.

No, I don't work for Yaesu ... I just like my FT-8000 a lot!

>

The prom used for channel control in that version of Motorola Syntor (not the X variety) can only be obtained from Motorola. I don't know what the price is, but may not be too bad. There are a few enterprizing hams about the country who have broken the programming code in these proms, but very little info is public from them. Its probably not worth trying to go that route if you would be happy with 16 channels or less, anyway.

869. News Rover -- Searches newsgroups for what you want - 218 0411040014 ELK

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-11 00:00:00 UTC
From: 218@sandh.com
Message-ID: <5ikukl$12s@news.triton.net>
Source record: 178198

Automate your collecting research!

News Rover is the ideal tool for searching through Usenet newsgroups for messages about items that you collect. Once you tell it what to look for, News Rover will scan a set of newsgroups and collect all messages that contain what you are searching for. For example, if you are interested in messages related to slide rules or calculators, you could specify a search expression such as:

slide rule or calculator

News Rover will then scan a set of newsgroups you select and collect any messages that match the search expression. This searching is completely automatic, so it works while you sleep, work, or play. The search expressions can be as simple as a single word, or they can be complex expressions with AND, OR, NEAR, and NOT operators.

You can download a free demonstration copy of News Rover from:

http://www.NewsRover.com

But News Rover is good for more than just searching collectables newsgroups. You can use it to search for family names in genealogy newsgroups, or for any other type of information in any newsgroups you choose. And News Rover is ideal for picture newsgroups. It decodes both UUencoded and MIME base64 images, and it combines and reconstructs binary files that are split into multiple messages.

Here are some of the key features of News Rover:

o Scans newsgroups you specify while you sleep, work, and play.

o Automatically downloads messages and attached files so that they are available for instant access when you are ready to review them.

o Decodes attached files of all types (UUencoded and MIME base64).

o Displays a picture gallery of collected thumbnail size images with quick-action keys to delete, view full size, and save to permanent collection.

o Selects messages based on include and/or exclude criteria to help you find a needle in a haystack and eliminate spam. You can even use complex selection expressions with AND, OR, NEAR and NOT.

o Supports multiple "interest groups," each with sets of newsgroups, selection expressions, message database, and picture gallery.

o Remembers files already extracted and eliminates duplicates automatically.

o Saves parts of multi-part files, searches for the missing parts, and rebuilds the entire file when the last part arrives. It even combines parts found on different days and in different newsgroups.

o Operates on a schedule you set up to use your phone line only when you don't need it.

o Automatically dials the provider and hangs up the phone when it is finished.

o Works with almost all Internet providers and news servers.

o News Rover is multi-threaded so you can read messages and view pictures while it downloads and decodes more messages.

News Rover was designed and written by real-life Usnet newsgroup junkies! With News Rover the news is ready when you are!

To learn more and download your free demonstration copy, visit:

http://www.NewsRover.com

Well my shack is out in the barn with the sheep. Is my high tech
electronics safe around Fluffy?

If we ever have another copper shortage I'll just weave some wet cat hair
to take the place of a wire conductor. "Antenna here is a Siamese about
40 feet up in a tree."

And the only time my cat is in the car is when I send him to 7-11 for
more beer. (they won't sell to Fluffy cuz she's not old enuff).

Who do you have to blame but yourself. Part of every deal is shipping when
you have something sent to you. If you don't ask you take what you get.

I have no idea what HRO's shipping policy is but when I buy from them I
ask. I get a prompt answer and can make my decision.

I am happy with everything I have purchased from HRO and they have treated
me very fairly.

> gets fooled into being turned on.

To whom it may concern --

I've owned a TS-570D since mid-January and it's been a perfect rig. No problems here at all. In reference to Kenwood's comment above, the manual states that once you have turned the rig on, you can then turn it on and off using the switch on your power supply (as long as you don't switch off the main power switch on the rig). It was unclear to me in the above posting whether this was a case of equipment malfunction or the operator not knowing about this function.

I have seen several posts regarding TS-570Ds that have lost their memories using the Kenwood power supply (I'm not sure which model). I use an Astron RS-20A. Knock on wood, I haven't had the first problem with my TS-570D and I would recommend the rig to anyone.

878. Icom IC-740 for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-11 00:00:00 UTC
From: zaax@aol.com
Message-ID: <19970411124600.IAA18604@ladder01.news.aol.com>
Source record: 178207

I have an Icom IC-740 for sale. I has exery possible option installed. Included
in the readi are the following. PS-35 internal power supply, EX-241 marker unit, EX-242 FM unit, EX-243 electronic keyer, FL-44 2.4khz SSB filter, FL-45
500hz CW filter (9mhz) and a FL-52 500hz CW filter (455khz). This radio has an execellent receiver comparable to the Icom IC-761. Ih has IF shift PBT and a notch filter. Check out these specs. minimum signal -133db, blocking dynamic range 130db, 2 tone 3rd order IMD duynamic range 95 db and a 3rd order intercept of +9.5db. Also included with the rig are; hand mic,
AC and DC power cables, service manual, manual and accessory plug. This makes a great bas or Field Day rig as it will run off both AC and DC without
an external supply. I am asking $725.00 for the above which includes shipping. If you live near Detroit and would like to pick it up the price would
be $700 and I would through in a hard case for it.

879. Need info on Commercial HTs

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-11 00:00:00 UTC
From: Timothy_Shearer@mk.com
Message-ID: <334E31CB.7955@mk.com>
Source record: 178208

Can anyone point me to where I can learn the capabilities of commercial HTs?

I usually only use 3 or 4 frequencies and I understand Comm HTs will not become overloaded as easily as ham HTs. I don't want to buy crystals so I need to know which radios can be programmed easily or by a visit to a radio shop.

Can a Motorola HT440 (450-470) be put on a 447 repeater freq w/PL?
Is a HT-440 a big and ugly HT? a site with pictures would help

I would appreciate any suggestions

Thanks for any guidance
Tim

Last Time I ordered something from HRO, Atlanta I believe, it was shipped for free and not taxed. Living in Ohio, that is something that can't be said for AES.

People, get real! There are dozens of Amateur mail order companies. Would it kill you to use their toll free numbers to call each one and find out what the price is? Let the buyer beware, but if he is ignorant, there isn't much that can be done.

I don't think I have ever bought a radio based on a "published List Price", I buy them based on the selling price, and who has the best one.

Tom

What is the *shape* of the SWR curve? If it is broad, you're seeing
loading from other structures in the immediate vicinity of the antenna.
If it dips very sharply at the frequency where you have it tuned, then
the problem is something else, probably a problem in the antenna's
matching network.

Will trade Wilson 25 watt VHF 16 channel mobile, keypad programmable for a clean 10 meter mobile w/FM.

Wilson includes microphone, bracket and a new power cord. In very good condition.

Bob

I am posting this Collins listing for a fellow ham in California who is not on the Internet. He has a late serial number Collins KWM-380 (ser# 1417) with no accessories, but mods 11,12,13,14,15 and 18 done by Rockwell Collins during 10/82. The KWM-380 was the last amateur radio produced by Collins. It is a microprocessor controlled frequency-synthesized transceiver with two VFOs and LED display. Price when new was $2,995. Includes manual. Sale Price is $1,900.00 - - - plus shipping - - - from Los Angeles area. Contact Leo, KJ6HI at 310-670-6969. I have not seen this transceiver, so you'll have to speak to Leo directly to verify all details. The facts and information provided here are his representations.

Hello,

I have a 286 PC for sale. It would make a good, dedicated terminal for packet. It consists of the following:

286 Packard Bell cpu
2 meg memory
5.25 and 3.5 inch floppy
Color VGA monitor
Mouse
101 keyboard

The unit needs a new hard drive.

I will deliver within 100 miles of Jacksonville, Florida, otherwise, you pick it up.

$125

If interested, contact:

Jim Finney, WA5VPW
jpf@southeast.net
904-348-2316

Thanks,

Jim...

Source record: 177990

I agree with Joe. I've had some peculiar experiences with HRO too. Check this one out: several months ago I was in the market for a TL 922 amplifier. Two HRO stores had one, so I purchased the one going for the best price. They took my visa card number over the phone, sent me a receipt for the charge sale, and then never sent the amp. I called to find out what the problem was a couple of weeks later and they told me that they weren't going to send me the amp after all. The reason: they "did not have a box to ship it in." They were not going to ship it because they didn't have a box! I couldn't believe my ears. This was a sale for over a 1000 bucks! So I said why don't you go buy a box? "Sorry", was their response, "we don't do that." I was quite annoyed by this point because they were cancelling the sale for lack of a box. So then what do they do: they refund all of my money except for $60.00 ! This sent me over the top. After getting irate with them over the phone, I finally got all of my money back several weeks later, but what an absurd ordeal. I suggest that anytime anybody orders from them, be sure to ask if the price includes a cardboard box. I've never been disappointed with AES, and all their stuff comes with boxes. 73, John K7JY (former KI7JB).

From: Cleve Massey <cmassey@airmail.net>
Message-ID: <33504AF2.45E1@airmail.net>
Source record: 177992

If you are not interested in 2 then why get the 706!!??

I have had two DX-70's...the orig and the TH!!!

Loved them both...great receivers and a snap to use..plus you get the SSB and CW filter for the $850 or so dollars...they are extra with the ICOM...

Yea, the Alinco is not exactly a easily detachable head...once you remove it you should leave it detached.

my two cents...

Hi Larry, I'm the twerp in the far east. How are you? Obviously,
you're a big
putz, seeing as how you've not included your email for me to reply
directly to you.
Normally, I keep flames (or flame replies) to myself. But what the
hell... I
cant resist this one.

> Story: Hear the one about the lady who walked into the meat market and saw
> a sign advertising chicken for $.79 a pound. She tells the butcher "that's
> kinda high isn't it. Matt's meats down the block has chicken for $.29 a

> some!" The lady says disgustedly "I tried but he was all out" The butcher
> looked her right in the face and says "Well lady, if I was all out, I'd
> have it for $.29 a pound too!"

Good story, but like the comments above, you've seemed to have missed
the
point. The original poster commented that HRO's "list" prices are not
MSRP list -- they are made-up. I replied that I too had been slimed by
HRO Anaheim, in this case, for a $100 filter (which I agreed to pay for)
but was pissed due to the $20 shipping charge.

> When this pencil necked geek over seas found out that nobody had the filter
> he wanted except HRO ... he could have objected to the $4.00 higher price
> by not buying it. Noooo. Instead he pays it and then gripes all over the
> internet about the $4.00 and the extra postage it took to get it to him.

I never complained about paying extra for the filter. What I was hacked
about was shipping. I've NEVER had to pay so much in shipping charges.
I
would speculate this is how HRO recovers all that shipping money on the
"over $100 - free shipping" sales.

> wonder what he paid in phone calls asking if someone had it in stock?

Nothing -- 800 numbers are toll-free (duh...)

DEPENDING on your interpretation of "great condition" about $200, is a
good place to start. That rig is all tubes, and the types it uses are
getting very hard to find, and are *EXPENSIVE* when you do. It's a good
rig, or was in it's day - I had one myself. When you settle on a price,
drop me an E-mail, I might be interested...

924. WTT: ICOM IC-R7000

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-12 00:00:00 UTC
From: bthaysen@juno.COM
Message-ID: <19970411.210720.6423.3.BThaysen@juno.com>
Source record: 178015

Hello group .. I have a mint ICOM IC-R7000 receiver <all modes: 25mhz to 2ghz>.

This is THE ONE to have for serious public safety monitoring, etc. The unit was manufactured prior to the cell frequency blocking requirement and is thus continuous tuning throughout the 800mhz band.
It is in excellent condition with original box and manuals.

What am I offered in trade? I'd be particularly interested in VHF SSB gear, or an HF tranciever of some sort. Drop me a personal email please. Thanks very much, and best 73's, Barry W6HZW/3 in Maryland.

926. FS: Icom IC-740 (loaded)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-12 00:00:00 UTC
From: AL7OQ <mfeldmn@ibm.net>
Message-ID: <334F0C20.7384@ibm.net>
Source record: 178017

I have for sale, one Icom IC-740 HF transciever in very clean condition. The rig includes the following:

740PS Internal Power supply
FL-54 270hz CW filter
Upgraded after-market SSB filter
FM Board
Marker unit
HM-10 up/down scanning mic.
Owners and service manuals, plus all manuals and instruction sheets for the above options.
Original box and packaging.

The rig is mid size (similar to the IC-745 or IC-751/A), and is ham-bands only. As a result of it's design, it has an unusually quiet receiver for a synthesized rig of it's era. Let's face it, in the mid '80's a general coverage meant sacrificing receiver performance due to added phase/synthesizer noise. It's one of the few rigs that had BOTH IF shift and pass band tuning, along with an excellent, fully adjustable IF notch filter.

Price: $550, including domestic UPS shipping, firm. Payment by money order or cashier's/certified/official check only due to previous problems.

929. FS: Kenwood DFC-230, PS-20

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-12 00:00:00 UTC
From: AL7OQ <mfeldmn@ibm.net>
Message-ID: <334F0F6A.741B@ibm.net>
Source record: 178020

I have for sale, the following:

Kenwood DFC-230, Digital Frequency Controller for the TS-830/530/130 series radios. Includes scannin up/down mic, mounting bracket, manual, and original box and packing. Somewhat scratched, but works perfectly.

This unit will add memories, scanning, and a second VFO to your rig. Since it has a mic. connector, it can be used to fully remotely control your rig in a mobile environment, leaving you with a little box the size of an extra-small 2m FM rig to mount under the dash.

Price: $150, including domestic UPS shipping.

Kenwood PS-20, 4.5 amp supply to match the TS-120V, TS-130V, TS-660, TS-670, TR-9000/BO-9, TR-9500/BO-9, in very clean condition, with box and manual. $45 includes UPS shipping.

Payment by money order or cashier's/certified/official check due to previous problems. (Sorry to inconvenience all the honest folks out there.)

73,
Martin

Source record: 178024

Yeah right, I've been trying to: 1. Get on the list. 2. Get back messages. Can't seen to get anywhere with this "reflector". Good luck, hope you have better luck than I have.

BTW - I have played with the rig on several occasions, and my gut feel is the spectrum scope it really too slow, and too insensitive (can't see signals below about an s4 or s5), DSP is lacking (compared to rigs like the Kenwood TS-870's), but has excellent audio, very nice features and flexability, very nice user interface, in other words, many good and bad features. Depends on what you are after. I.E. If you don't need "weak signal" detection on the spectrum scope, it work fairly well (could have a faster refresh rate). The DSP does provide some nice noise canceling capabilities, but lacks the band pass filtering the 870s provides (in the IF). I'm still interested in the rig, I'm waiting to hear if someone comes up with a mod to fix the scopes lack of sensitivity, and perhaps the refresh rate (good luck).

Anyway, my 2 cents worth. 73, Mike - WQ0N

Source record: 178027

For all you Christians out there, I need God's assistance with this situation.
I purchased a Yaesu 747GX transceiver from an individual.
I'm new to Amateur Radio, and this would have been my first HF unit.
The man made me an offer that I thought was very reasonable, and being short on cash I sent him one of those Discover Card checks.
He sent the radio by UPS insured, and when I unpacked the radio, I found it to be non-functional. The radio had been damaged during shipping.
Upon speaking with the sender over the phone and through e-mail, I know that he had tested the radio and found it to be in perfect condition prior to shipping it.
He said so, and I believe him. There was both external and internal damage, and so I contacted UPS to report this. I faxed UPS with all of the info and documentation that I had here. UPS picked up the package from me.
I found out later that the package had been returned to the sender, and the sender received the radio in WORSE CONDITION than it was when I had it !!
The radio was damaged in shipping BOTH WAYS !!
Well, the sender is also dealing with UPS on this, and I hope that the two of them can work this out so that I'll be compensated somehow.
I don't want to loose my money, and I don't want to get some piece of trash back in the mail. I'm sure that this was a great radio before it was broken.
All I know is that I was told that the radio had been crushed.
Please ask GOD to bless the situation and cause it to work out for all of our benefits.
A very sincere 73 to everyone! Dale Wein

From: ljfm@polaristel.net
Message-ID: <5insm0$t8c@cronkite.polaristel.net>
Source record: 178030

I have been fortunate to find a really nice 1000D and bought it.

In playing with the receiver, I find that I have to make the choice between the BPF and the external antenna receive and changing between the two requires taking the covers off...whatta pain.

Does anyone know of a mod, or can that switch be moved to a more convenient spot so that one can switch between the BPF and the external antenna for split receive using beverages for example??

I'd appreciate any feed back.

Also, does anyone know of a mod for the tuning speed. It's currently at 10kHz per rev and would be much more acceptable for low band dxing if it tuned slower.

>
> How about receiver sensitivity within the ham bands? Is it decent?

< adam
< KA8QNT

Well Adam, I don't have another mobile to compare it to, but in practice
it seems to be quite good. The manual claims (for 12 dB SINAD) less than
0.18 uV (main band) and less than 0.25 uV (sub band) with image rejection
of better than 70 dB. Toward the upper end of the VHF private commercial band
the sensitivity seems to drop off. I can receive the wx channel 162.400 MHz
better on its image frequency of 252.500 MHz than I can on the fundamental,
even though the main band is used in each case.

Hope this helps,

--

I'm not sure I understand your problem. The Ft-1000 will operate with
two separate antennas - by connecting the second antenna to the BPF
and selecting the second antenna by the "RX Ant" switch in the upper
left hand corner. The "RF Mix" control will provide audion output
from either or both of the antennas/receiver at the same time. Such a
situation will allow two antennas operating with two separate
receivers. Great for diversity operation.

With the RX Ant in the out position the main antenna is connected to
both receivers.

Hope this helps

944. Radio Shack HTX212 problems

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-12 00:00:00 UTC
From: kenlewis@istar.ca
Message-ID: <5io3um$nev@news.istar.ca>
Source record: 178035

my HTX212 has a shorted diode / burned resistor combination.
the problem is the schmetatic has one number for the diode & resistor
but the parts list from the Shack's web site have something different.

The diode is D14 and the resistor is R95 both located near the RF
final. The radio has little or no output and the meter shows no output
as well when the mike is keyed.

If anyone can help with information on these parts (ie diode type &
ratings etc, Resistor value & wattage) it would be much appreciated.

Why do you say the FT5100 is overrated (Do you have one). I have 3 and love all 3 of them. Sure it has it's little problems like all other rigs do but they don't show any of the problems your talking about. Now if you where to talk about the FT8500 then you may see a problem of low receive on 2 meters. Just had to send my brand new one back for that and so did several others I know.

It might but the detector out is connected to the narrow FM detector.
You would need to change it to the 150 Khz wide FM detector or build
something that you could attach to the 6 Mhz wide IF out jack.

Dale,
I don;t know about God blessing the situation, but I can relate a similiar incident. I had sold an amplifier for $1500 to a friend of mine, sent via UPS insured, and sure enough, it was damaged in transit. This, even though I had the company that did the shipping to package it. To continue, UPS picked up the package from the recepient, sent it to the manufacture, had it completely gone through, and returned it to the individual that I had sold it to. It took several months, but the outcome was OK. Just sit tight and keep in touch with UPS and I think things will work out.

Good luck.....

I can honestly say I have never been treated anything but fairly by the people at HRO or any other reputable Amateur Radio Equipment dealer in the 34 years I have been buying equipment from dealers. Before I would call them SOB's, I would contact them and find out the facts, since it apparently wasn't clarified when the order was made. Its an unusual scenario.

Hello all. I know a lot of the amatuer stores out there don't have
web pages, so I have put up a new site called http://www.repeater.net
so that these places have somewhere to put up a site. This also goes
for personal webpages as well. If you come to the site and read it,
you will see the pricing info. I must add also, that the first month
is free. If you feel like it isn't really helping you out, then after
1 month send me email to the address on the page, and we will cancel
you pages. THis is for all people looking for a site, but we would
like to get some more amatuer radio stores showing up on the internet.

again, the site is http://www.repeater.net

For sale only:

Pro-Audio recording gear:
British-made "ACES"-brand 24-track 2" recorder with remote, 15/30 ips with vari-speed, sold new for $19,000.00. Also ACES 32-input in-line mixer, 24 groups, 5-band switchable EQ, 5 sends per channel, extensive routing options, patchbay, etc., sold new for $13,500.00. All manuals, wiring harnesses, and lots of spare parts included. Both units are one-owner. I'll sell both for $10,000.00.

For sale or trade:

PATCH BAYS:
19" rack-mount patch-bays, with heavy-duty long-frame mil-spec Switchcraft/ADC 1/4" jacks. Front panel is black phenolic with designation strips, attached to a metal reinforcing frame. Jacks are switching type, and may be wired in a variety of ways such as normaled, semi-normaled, etc. They are wired to a "punch-block" which is mounted on the back of the frame, and connections may be made to the punch-block, or directly to the jacks. I have:
Quantity: 3 Number of jacks: 48 Approx. list price: $150.00
I sell these for $40.00
Quantity: 4 Number of jacks: 72 Approx. list price: $60.00
I sell these for $60.00
Quantity: 3 Number of jacks: 96 Approx. list price: $250.00
I sell these for $80.00

I also have:
POWER SUPPLIES
These are "Sola" brand 117VAC in, 15VDC out bi-polar power supplies, highly filtered and regulated, PC-board mount (but easily adapted), and were used in medical heart-monitoring equipment. You can find them listed in the Allied Electronics catalog. I have:
Quantity: 4 SOLA#84-15-2135 Rated at: 350MA
Allied price: $220.00
I'd like $20.00 each
Quantity: 7 SOLA#84-15-2120 Rated at: 200MA
Allied price: $154.00
I'd like $15.00 each

I also have 2 Tektronix Model 620 X-Y display monitors, with 10X12 cm screens, suitable for analog display data such as ultrasonic detection systems, volume & vibration analysis, auger probes, and biophysical systems as well as computer and data transmission systems. I don't know what they cost new, but they are real nice, and I'd let them go cheap.

Make an offer--I'll horse trade!!

966. Spurious cellular reception on the PRO-2035

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-12 00:00:00 UTC
From: abtownes@juno.com
Message-ID: <860870377.25516@dejanews.com>
Source record: 178057
Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment

The PRO-2035 scanner from Radio Shack is a popular model covering up to 1300 Mhz, but with the cell frequencies blocked out, and not restorable by any simple trick. It is known, however, that this scanner exhibits spurious cellular reception, particularly in the range around 1100 to 1115 Mhz. In his write-up on this scanner in 1994, Bob Parnass provided the table shown below, comparing several spurious frequencies with the corresponding actual cellular frequencies. (His write-up is repeated in his posting of 1997/2/23. Search "Parnass" in DejaNews.) I presume he obtained this data experimentally, by generating cellular frequencies and searching for them on the Pro-2035.

***** Parnass's Table *****

PRO-2035 tuned to frequency (Image)	Actual transmitted (Actual)	Difference (Actual - Image)
1105.550	870.450	235.100
1107.875	876.120	231.755
1110.900	881.100	229.800
1113.470	886.530	226.940
1114.840	893.160	221.680

A surprising feature of his data is that the freq. difference, in the third column, is different for each of his data points. We might have expected the spurious response to come about from a single combination of frequencies, leading to a simple linear relation between the cell freq. and the spur. (image) freq. This would lead to the difference being the same throughout the third column.

I decided to look into this with my new PRO-2035, and see whether I could make better sense of it. Having no cellular-capable receiver, and no adaquate signal generator (It would take quite an expensive UHF synthesized instrument to do this.), I used my synthesized 2-meter HT, at low power, with a harmonic generating network. That consisted of a couple of resistors across the RF output, with a high-freq. silicon diode across one of the resistors. This was hardly an efficient harmonic generator, but with hundreds of milliwatts in at 144 Mhz and picowatts needed at 880 Mhz, it did not need to be efficient. Tuning from 145 MHz to almost 149 Mhz covered the high cell band, 870 to 894 Mhz, where the fixed stations transmit, using the 6th harmonic. (Some days we just get lucky. This really took luck.) All harmonics could be heard on the scanner except 4 & 5 which are on frequencies the scanner does not cover. Touch tones made

them easy to spot. Since cellular reception has been reported around 1100 Mhz, I started around there and quickly found my carrier and touchtones. In each case, I changed the 144 Mhz freq. by 20 kHz, and watched the 1100 Mhz signal move by 120 kHz, proving that it was indeed the 6th harmonic that was involved, the actual cellular freq. Two facts emerged.

1) The spurious response frequency moved DOWN as the applied cellular freq. moved UP, and indeed by 6x, on all the ranges I investigated.

2) The simple linear relation between the spurious response frequency and the actual cellular freq. persisted for only about 1 or 1.5 Mhz. Then the signal was lost.

Thus, the spurious "band" is actually a complicated set of subbands with different frequency combinations producing each one. This is some of my experimental data:

869.130 to 870.510 ---->>>> 1106.875 to 1105.505L

887.400 to 888.000 ---->>>> 1112.605 to 1112.005

892.500 to 893.970 ---->>>> 1115.500L to 1114.035

The "L" means limit, that is the spurious response dropped off at that point. The middle data above might have been extended further. Parnass's first and last frequencies interpolate nicely into my first and last ranges. His three middle freqs would make good starting points for finding more ranges, but I had forgotten that he provided the above table while I was doing the data-taking.

This work can be repeated by anyone with a 2-meter HT, but I got tired of taking data. It is possible that more than 1 cell freq. can be heard at some points in the spur. band. If anyone explores this and finds more match-ups, please post them.

I have also discovered that the PRO-2035 has another type of spurious response not mentioned in the newsgroups, and, I believe, of a type never discussed in any literature on radio technology. When an FM'ed carrier is heterodyned with an oscillator, the resultant sum or difference signal is found to have the same FM as the original. Indeed this is the basis for heterodyne reception of FM signals, single or multiple conversion. Every scanner uses it. Suppose that in an unusual situation, 2 carriers, FM'ed with 2 different audio signals, are mixed, perhaps with a separate oscillator to get the 3-signal mix to the desired IF. What then? While FM is a nonlinear process that often leads to complex results, in this situation the two instantaneous frequencies of the FM'ed carriers add or subtract and produce a single resultant carrier, FM'ed with the sum or difference of the two original audio signals. I know of no use for this principle, except to explain what I am hearing on the PRO-2035. Just scan around between 1075 Mhz and 1095 Mhz using 5-kHz steps in a location and at a time when many strong cell signals are present. This works only during a busy time since you need particular unrelated pairs of cell channels to be active. What you will find are channels with two

independent conversations at the same time. Never one. When one hangs up or is handed off, you lose the whole spurious response. The two conversations do not interfere, in the sense that there is no whistle or distortion. Indeed, it sounds much like what we commonly hear with two single-sideband signals transmitted on the same frequency. With FM, two signals transmitted on the same frequency would never produce this result. It takes this wierd spurious combination. This combination effect is also found between 1100 and 1115 Mhz in some spots, among the carriers with single conversations.

I look forward to hearing what others think of all this.

Al

$559 - Yaesu FT-8500 with the MH-39 Newer compact, one touch, FULL-FUNCTION mic for safer driving. Large Omni Glow removable display. Alphanumeric and seperate frequency numbers displayed together. Built it variable resulotion spectral anylzer lets you view signals accross large band segments. Imaculate. Special quick release bracket. Remotable head unit for security.

$329 - Connect Systems CS-900 VOX SIMPLEX (or repeater) AUTO TELEPHONE PATCH (Interconnect). 90 speed dials, two level safety codes. Makes your HT like a Cell Phone. Works extremely well. Dual-bander not needed. Built in programable keypad and volume adjustments. Needs only a mic and audio out conection on any base radio (or HT). Phone line plugs right into the back. Multiple and flexible options like notification if caller is on the base phone, and when they are done. Range over 15 miles simplex (30 mile circle) on 2m band. More simplex range with fancy base antenna, more height or an amplifier. With permission, just tune the rig to a wide coverage repeater (Run repeater clubs patch from a home). Connects to any rig so use it with a spare. Multiple volume adjustments (mobile to land,Land to Mobile,CW volume,DTMF volume ect.),and BUILT-IN keypad. Of course CW ID makes it legal. Dispach and selective calling too. It's your choice, you are the control operator. Plus a long list of other professional features.

$159 - Mother board PENTIUM 90 mhz, PCI & ISA bus with CPU and fan. Upgrade your olde today. Takes 72 pin memory. (see PCI card below)

$69 - Card - SVGA PCI high quality video. $49 with above motherboad!

$29 - 14.4K fax modem w/manuals

Hi there,

OM Johan ZS4KB is looking for either a schematic or workshop manual for a Pye Olympic 2metre rig. Can anybody help??

Johan can be contacted via packet radio ZS4KB@ZS0BFN.OFS.ZAF.AF or fax to 27 57 353-1600 or telephone 27 57 352-5130. Or even via the net to dennisg@netacttive.co.za and I will get the info to him.

Enjoy your day!!

It looks as if our resident knocker is at it again, though April 1 was
two weeks ago!

However the concept of auctioning one and two letter amateur callsigns to
the highest bidder (rather than through a lottery system) has
attractions. Here in Australia we floated the idea (tongue in cheek)
that those with two letter callsigns should give them up and have their
callsign re-allocated to the highest bidder at a public auction attended
by all amateurs (on April 1, 1996). That created quite a stir, because
most amateurs want a callsign that's either very close to their initials
or very short. I suspect that a proposal to auction attractive callsigns
would raise even more controversy than one to auction some of our bands.

How about your prejudice in favor of HRO? Here's a news flash for ya...

Did you know that HRO LIES to hams in their catalog about many factory
suggested retail prices?

2 Cases in point:

Standard's C156A and C228A HT's.

HRO lied about them in their latest catalog by saying the price HRO asks
is HRO's own special discount price and that the factory suggested price
is much higher, when in fact, HRO's "discount price" IS the factory's
suggested retail price!

HRO Says...

Model Suggested HRO Price

C156A $289.95 $199.95
C228A $695.95 $579.95

Standard Says...
```

Model Suggested

C156A $199.95
C228A $579.95

This is the case on many many items in HRO's catalog.

Bottom line: HRO is lying and probably has been for years!

I thought Jun's was a rip-off... then I went thru HRO's catalog and saw HRO wrote the book on rip-offs! It wasn't hard to bust them in their lie because all the manufacturers are now on the internet.

If you want to pat a company on the back, look to Ten Tech or AES. They are two of the most straight-forward companies around and they deserve a pat on the back.

You guys know by now that I am a master at fault-finding and criticism, so if I tell you that a company is okay, then you can bet your fuzzy butt that I HAVE scrutinized them and that they ARE okay! Because if they are not right you can believe I'd verbally rip them to shreds and enjoy it! There's nothing a man who is dirt poor hates more than someone trying to rip off what little he has or who is not giving him his money's worth!

And HRO is a sad case too. They are so big that they can afford to be straight with us but I guess maybe greed has blinded them to the fact that hams are not stupid and we eventually find out when a company is full of crap and most importantly, we the consumers made HRO as big and successful as they are and we the consumers can put HRO back in the poor house just as quickly. That goes for any company.

I don't get any money from any ham equipment maker or distributor so I have no bias in my critique or my praise of a company. I call em like I see em... and if they don't like it they can go straight to hell.

984. IC-706 Tx lockup trouble?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-13 00:00:00 UTC
From: Gerry & Robin Lempicki <lempicki@psych.umass.edu>
Message-ID: <335186E9.2823@psych.umass.edu>
Source record: 177871

Hi! My neighbor is having trouble with his 706. He went out to start
his car the other morning, just like any other day. Once it was
running, he turned on the 706, then went back in the house to let the
car warm up. While in the house, his scanners locked up on a carrier
being transmitted. It turned out to be the 706 in the car transmitting!
He disconnected the microphone, and tried a complete reset, all with no
luck. It still is locked up in a tx mode. Has anyone seen this problem
before? I hear that if he shuts the radio off for a while, when it is
first turned on it is ok for a sec or two, then goes into tx mode.
Any ideas?

987. Need Help For Old Receiver, Strip Chart Recorders

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-13 00:00:00 UTC
From: Jes Logan <iffo447@ccwf.cc.utexas.edu>
Message-ID: <33517CDA.D0@ccwf.cc.utexas.edu>
Source record: 177874

I would very much appreciate getting a copy of manuals for an old receiver and a couple of strip chart recorders. I need to align the receiver and change paper and ink in the recorders. If you just have alignment or paper/ink change information, I'll take that too, gladly. My fax number is below.

The receiver is a Hallicrafters S-51. The strip chart recorders are (1) a Hewlett Packard Model 7128A dual pen recorder and (2) a Heath Model SR206 dual pen recorders. I use the strip chart recordes to record radio astronomy data. And the receiver, well, I just like old stuff.

I will pay copy costs and a fee for any of them. My 'other' Email address is "logan@electric.aus.tx.us" and my fax number is 512 331-0277 or 512 322-6221. My mailing address 13242 Kerrville Folkway, Austin, Texas 78729.

Thank you very much. Any help would be greatly appreciated.

So ... how can we find out the
Advertised Price
Suggested Retail Price
Street Price
Sale Price
Really good sale price

Maybe HRO should have columns for price?
Suggested Retail Price.......... What the supplier wants us to say
Our day-to-day price............ What we'll nominally sell it for
Sale Price [Cupons] .... Our rebate from the manufacturer
Actual, bottom of the line, no sh*t lowest price we can sell it at ...
price

"Hey Kid! Stick you head inside the car window. See this here piece of
Ham Gear? I'm a gonna do you a favor...pay attention kid!...just pay me
in cash this amount and you can take this home with you ... No Kideen
... for 40% off of the list... but there's no guarantee..

Yada yada yadayadayada...

Oh - can you mail it to me in Taiwan and not charge me $25 for postage?

So will someone put out an article on how to build state-of-the-art ham
gear in the home?
Heathkit!!! Where are you !!!

Sure Kid, stick your head inside the window. Got cash, don't cha?

990. Installing SSB Filter in TS520 - Help

I had a FT-5100 for 2 years and sold it. I was happy with most of the features on the radio, but when I checked it for rec on uhf I found that most of my Motorola commerical radios heard better in the ham band then did the 5100. I feal that the internal duplexer had quite a bit of loss on uhf. The radio tx was fine, and vhf did not seem to have the same story.

Less than that new!? No way. New, from Motorola cost is in the
thousands... Might be a bit steep, but if that is what he wants,
he has the right to ask...

1000. Amp Questions: LK500Z Amp Supply

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-13 00:00:00 UTC
From: Sir Robin <nexus15@flash.net>
Message-ID: <335179BA.4E35@flash.net>
Source record: 177887

Would anyone like to give some information or opinions on the Amp Supply LK-500ZB dual 3-500Z amplifier?

Info sought is mods to be done, things not to do and general use comments. I have just purchased one.

I appreciate all that reply direct or via the news group.

Thanks...Rick....W5RH

Yes, use a 12 volt gel cell or an old car battery or a good regulated power supply. If you have to ask how to hook it up, what luck do you think you may have trying to repair it, unless its a broken belt on the deck or something?

> The radio was damaged in shipping BOTH WAYS !!
> All I know is that I was told that the radio had been crushed.
> Please ask GOD to bless the situation and cause it to work out for all of
> our benefits.

Suggest God may be busy elsewhere. Suggest you contact UPS directly, not through God. UPS has a claim file. Did UPS pay the claim? To the shipper, of course! So the shipper (and seller) has your payment and the claim payment. Maybe the seller has some explaining to do?

> A very sincere 73 to everyone! Dale Wein

Dale, when I ship something worth a kilobuck, I always use Fedex. Why? Because when I receive a UPS, the driver leaves it on my driveway, rings the bell, and runs. If I am really quick, I can barely see his truck as it leaves. He may be fast, but that's pretty poor delivery security. Gone are the days when I have to sign for UPS. Fedex makes me sign for it, so I assume I get similar treatment for my shipments when they are delivered.

FCC Expected to Unveil Plans For Two Airwave Auctions

WASHINGTON -- Federal regulators are expected this week to set plans for two long-awaited auctions of valuable airwaves, including one for an emerging wireless technology that could bring new competition to the local-telephone and cable-television businesses.

Wireless operators, long-distance phone companies, electric utilities and telecommunications entrepreneurs are eager to bid for licenses to use huge chunks of the amateur radio spectrum to transmit voices, pictures and data.

Wireless Auction

Up for grabs: Licenses to use most of the amateur radio megahertz of electromagnetic spectrum in each of nearly 500 markets nationwide. Repeater frequencies are much in demand by those with the following: Uses: Transmitting voices, pictures and data via small, flat antennas that can rest on a windowsill. Expected bidders: All sorts of telecommunications companies -- but Baby Bells and cable operators will be barred from bidding on licenses in their home territories.

"While the auctions for PCS frequencies were very specific about how the frequencies could be used, rules governing LMDS usage are more liberal and for a bigger chunk of amateur radio bandwidth," said Michael Sprayberry, director ofwireless strategy for MCI Communications Corp.

New Radio Service

The auction rules have been delayed in recent weeks because FCC commissioners couldn't agree on what amateur radio spectrum would be available.

The technology operates with small, flat antennas that communicate with larger antennas mounted on towers. It has tended to work poorly in heavy rains and fog, but industry officials say they are working to fix the problem. Operators also could run into resistance from cities that increasingly are blocking the construction of new antenna towers. However ham towers could be seized as the FCC has decided that the amateur radio service no longer serves the public necessity.

Source record: 177932

YAESU FT-1000MP for sale. Includes FH-1 Remote Control Keypad, 500 kHz CW Filter (8 mHz) and the matching MD-100A8X mike. The radio is in pristine condition, less than 10 hours of use in a NO SMOKING home.

The radio was purchased new 12/96 and is S/N 6E08214. The ALC and RF Processor modifications were factory installed when the rig was manufactured.

My price is $2500. I will consider a Kenwood TS570 + cash. A local deal is preferred to preclude shipping damage, and so there will be no question of misrepresentation by either party. I am located in Culpeper, Virginia, about 60 miles SW of Washington, D.C. In the event the sale is not local, shipping is not included in the price.

Reason for selling is I need the $$ to cover unexpected expenses at home.

If interested, contact me via e-mail ab4n@erols.com or call me at home (before 8:00PM Eastern Time) at (540) 829-6548. During normal working hours I may be reached at (703) 367-3974.

I used an AEA Ioop antenna in the attic of my townhome for a couple of years and had to adjust the "Iso-loop's" distance from the radiating loop to get the SWR down to an acceptable level. If you open the covers you will see that the small coax loop can be moved back and forth. Try adjusting that spacing to lower your SWR.

Good Luck,
..Eugene.. AA9LA

There have been two or three versions over time. I haven't actually seen one advertised in ages.

I have an EQ-300. No schematic came with the unit. Maybe $60 when new (don't remember exactly). I purchased mine direct from Heil sometime in the late 80's.

As far as EQ's go, its mighty basic -- but certainly better than no EQ at all. Uses some TL072's. Has low freq cut/boost and high freq cut/boost. I originally bought it to use primarily as a PREAMP for Heil mics with Icom rigs.

I am amazed by this policy that UPS drivers use. I agree about barely
seeing the truck as it speeds away. They must hire track stars as
drivers. I sent UPS a letter once informing them that a thief could
have a Hell of a good time following one of their trucks around. Just
wait a few minutes to see if anyone comes out of the house, then grab
the packages. Of course, I got no reply to my letter.

Date: 1997-04-13 00:00:00 UTC
From: kb2rmi@pop3.frontiernet.com
Message-ID: <5iqtpr$8hs@node2.frontiernet.net>
Source record: 177941
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Have the 211, digital display 2m all mode base, will also run 12VDC, dual VFO's, cosmetically nice except for some scratches on the rear of the top cover from another radio being set on top, 1-10W variable, has the scarce RM-2 computerized remote head with memories/digital/direct entry/scan, etc. Std mike, all cables for AC and DC operation, manuals for both units. used daily.

Would trade for solid state HF rig, or would consider a late model 2M/440 dual band mobile (No HT's please).
Email replies please

Date: 1997-04-13 00:00:00 UTC
From: "David M. Nance" <dmnance@roanoke.infi.net>
Message-ID: <3351274D.16D2@roanoke.infi.net>
Source record: 177946

I have an Icom IC-22s which I bought new, used very little and then put away for 20 years. This unit was one of the first, relatively inexpensive synthesized 2-meter rigs back in the mid-70's. Trouble is you can only "program" 22 channels by soldering in the diodes on a circuit board in a binary code arrangement for each channel desired.

My question: I understand someone either manufactured or published plans for an accessory to make this unit fully synthesized. Does anyone have any information on this. This unit is like new and I would now like to get some more use out of it?

Hi, Would you be interested in making thousands of dollars quickly and legally?

If your answer is YES, then take 5 minutes to read this article. It will change your life.

You can make up to or more than $50,000 dollars in 4-6 weeks, maybe sooner!

I'M NOT JOKING AND THIS IS ABSOLUTELY NOT A SCAM

The internet has grown tremendously and it continues to double in size every 4 months. Think about it: You see all those "make.money.fast" posts more and more often. That's just simply because it works!!

I was browsing around my newsgroups one morning and I stumbled across this article. Since I have this burning desire to make a lot of money and this headline caught my attention, I read it.

It said that you send $1.00 to each of the five(5) names on the list. You then place your own name and address stated in the article at the bottom of the list at the #5 position and post the article in at least 200 newsgroups {there are literally thousands of them, and this doesn't take as much work as you think}.

At first I thought, nobody's going to do this. And then I thought, what if they DO! Besides, what's five bucks anyway? I spend that on snacks a few times a week. Well, it's still hard to believe...but two weeks later I began receiving bucks in the mail! I mean a lot of money!!! It not only works for me, but it works extremely well for others as well. Mike Ochoa says he made #35,382 dollars in one month! Chanter made $42,000 in four weeks!!! Dave Manning made an incredible $53,664 dollars in four short weeks!!! And

Lars myers says he only made $21,000 dollars (ONLY!!?}

That's the article. Now do I know all these people? No. But when I read how they did it, it started to make a lot of sense to me. As a matter of fact, it made enough sense that I'm now taking a similar chance with $5 measley dollars of my own. Not a huge investment that I can't afford to lose, but one with incredible potential to deliver money to my mailbox!!! Can you imagine making $20,000 dollars or more for less than an hour,s work? What are you making now? All you ever have to spend is five bucks and postage for the envelopes. That's all Mike, Dave, Chanter and Lars did and look what happened to them: they made tens of thousands of dollars in a safe, legal and completely legitimate way.

Let me show you how and why this works now. Also, make sure you print a copy of this article so you get the information from it and START MAKING MONEY NOW!!! here goes:

Get 5 separate pieces of paper and write the following on each sheet of the paper...."PLEASE PUT ME ON YOUR MAILING LIST". Fold a US $1 bill inside each paper {wrap the bill with the paper so the bill will not be seen through the envelope. Otherwise nosy people, who like to steal envelopes with money in them will see the bill and swipe your profits! Put one paper inside an enveolope and seal it. Do the same for all five. You should now have 5 sealed

envelopes, each with a piece of paper and a US $1 bill stuffed inside of the paper. You're not just sending a dollar to someone;

you're actually paying for a legitimate service which is PERFECTLY LEGAL! Now, mail all 5 envelopes to the following 5 addresses:

1. J.H.
2430 Meadow Lane
Lakeland, FL
33801

2. E2AA
2862 Donnylane Blvd.
Columbus, OH

43234

3. B.K.
12 Chasemont Ct.
Baltimore, MD
21209

4. P.G.
PO Box 340286
Columbus, OH
43235

5. E.S.
11966 sw 91 Terr.
Miami, FL
33186

Step 2

Now remove the top name from the list that you see above and move the other names up (#5 becoming #4, #4 becoming #3, and so on) and put your name and address as the fifth on the list.

Step 3

Post/send the amended article (with your name at #5 in the list) to at least 200 newsgroups. This is the REALLY IMPORTANT part, so don't try to shortcut it. I'll explain more about this under the WHY it works part. (you can also send by irc or e-mail). Post/send as many newsgroups as possible. REMEMBER THIS!!!!! THE MORE GROUPS YOU SEND/POST to, the more people will see your article and send you cash. That's the real power of this business.

You are now in business for yourself, and you should start seeing returns within 7 to 14 days!!!

HOW TO POST THIS ARTICLE:

If you have Netscape 3.0 do EXACTLY the following:

1. Click on any newsgroups like normal, then click on 'TO NEWS' which is on the far left when you're in the newsgroups page.
This will bring up a box to type a message in.

2. Leave the newsgroup box like it is, just CHANGE the subject to

something flashy, such as "NEED CASH $$$ READ HERE $$$" OR "FAST CASH"!!

3. Tab once and you should be ready to post. Cut and paste this article exactly as it appears,except to insert your name at #5, and to remove #1 off the list, plus any other small changes that you might think you need to make. Keep most of it the same though. You don't want to change it too much--it's proven to work just as it is written!

4. When you're done typing the WHOLE article,click on FILE IN THIS BOX, RIGHT ABOVE SEND, NOW WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click and SAVE AS when you're under FILE. Save your article as a text file to your C: or A; drive. DO NOT SEND YOUR ARTICLE UNTIL YOU DO THIS. Once saved move on to number 5 below.

5. If you still have all of your text, send or post to this newsgroup now by clicking send, which is right below FILE, and right above Cc:

6. Here's where you're going to post all 200. OK, click on any news group then click on "TO NEWS", again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHEMENTS. You will get another box to come up. Click on ATTACHED FILE, and then find your file that you have saved earlier; click once on the file, and then click OPEN. NOW CLICK ON OK; if you did this right, you should be able to see your name in the attachements box and it will be shaded green.

7. That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you only have 199 more to go!!! (don't worry, each one takes about 30 seconds once you get used to it}

REMEMBER 200 IS THE MINIMUM.

You are now in the mail order business and will start receiving your #1 envelopes from various people all over the world within days.HINT: THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE! Incredibly simple, isn't it?

LET ME TELL YOU WHY THIS SYSTEM WORKS!!!!!

Out of every 200 postings, let's say I only receive 5 replies, which is VERY LOW. So I made $5 with my name at #5. I've already made my money back!

Now then, each person who just sent me $1 makes 200 postings, now with your name at #4,

WHICH IS A TOTAL OF 1000 postings, not including your own. Say 50 people send you $1 now, which again, is a very low response rate; that's $50 you made!

Now then, your 50 new agents post 200 listings each with YOUR NAME AT NUMBER #3,

or 10,000 postings (25 x 200). That's just how the system works at its worst case. However, the average return is 500 responses at $1 each. That's $500 in your pocket!! Each of your new agents makes 200 postings, which is 5,000 returns at $1 each, which is

$5,000 dollars!! And finally, 5,000 people make 200 postings with YOUR NAME AT NUMBER 1, YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST, AND THAT.S IF EVERYONE MAKES 200 POSTINGS ONLY, AND WITH ONLY A 5 PERSON RESPOND!!!!!

When your name is no longer in the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $1 TO 5 people in the list, putting your name at #5 again. And start posting again. The thing to realize is that thousands of people

all over the world are joining the internet and reading these articles everyday, just like you are right now!!! So, can you afford $5 dollars and see if it really works? Estimates are at 20,000 to 50,000 new users everyday.

REMEMBER: WORK THIS FAIRLY AND HONESTLY AND IT WILL WORK! THE BASIC IDEA IS FOR EVERYONE TO MAKE MONEY. GOOD

LUCK TO ALL WHO

PARTICIPATE, AND PLEASE, PLAY FAIRLY AND YOU WILL BE REWARDED!

DON'T put this off!! It's SOOOO EASY and SIMPLE, so do it RIGHT NOW

You won't be sorry!

*You may also want to get some bulk e-mail software to help the process along even faster.

P.S. If you try to deceive people by posting the messages with your name in the list and not sending the $5 to the people already included, you will not get much. I know someone who did this and only got about $150 (and that's after two months.) Then he sent the 5 bills and was added to their lists. In 4 - 5 weeks, he had in excess of $10,000.

Then obviously you didn't read my original message which began this thread or compared the INFLATED "Maufacturer's Suggested" prices in HRO's catalog with the manufacturer's REAL "suggested" prices which usually are what HRO says is the HRO discounted price.

Am I the only consumer who does his "homework' out here? Or are most of you too rich to care?

Good example of monkey-shines from HRO,(Ham Rip-Offs).

I have also heard many good reports about AES. AES is not much cheaper
than most, but at least they're somewhat honest.

Larry, you have no clue at all what the "Re:" inserted in the subject
means, do you?

It means HE DIDN'T START THE THREAD! I did and I'm in California, not the
far-east. If you read my original message that started the "HRO catalog of
LIES" thread and then did your homework on what I said in it you'd have
seen that they are liars. I didn't just arbitrarily use the term "LIES".
it was fully applicable. Quit defending somethin that has no defense. If
they lied then they lied. End of story. Just for the hope of curing your
ignorance, I'll repost my original message for you to read. DON'T answer
it without checking it out with the manufacturers first, which is easy to
do... all of their websites can be accessed thru mine,(see text-box #3 of
my signature file below).

Message-ID: <19970413024300.WAA11958@ladder01.news.aol.com>
Source record: 178008

$559 - YAESU FT-8500 with the MH-39 Newer compact one-touch, yet full function mic for safer driving. Push one key for REV, ENC, LOW, SCAN, SPA, RPT, MONI, MUTE, MENU, MT and more with TWO custom keys. Plus it has direct frequency entry. Alphanemeric paging auto receive. Very sensitive RF receive, superior intermod rejection. Loud speaker output. Large "Omni Glow" bright red removable display with auto dimmer. Alphanumeric and seperate frequency numbers are displayed together. Built it adjustable resolution spectral anylzer lets you VIEW signals accross large band segments. True dual receive and full duplex. Imaculate. Special quick release bracket. Remotable head unit for security. Absolutely Imaculate.

$329 - Connect Systems CS-900 VOX SIMPLEX (or repeater) AUTO TELEPHONE PATCH (Interconnect). 90 speed dials, two level safety codes. Makes your HT like a Cell Phone. Works extremely well. Dual-bander not needed. Built in programable keypad and volume adjustments. Needs only a mic and audio out conection on any base radio (or HT). Phone line plugs right into the back. Multiple and flexible options like notification if caller is on the base phone, and when they are done. Range over 15 miles simplex (30 mile circle) on 2m band. More simplex range with fancy base antenna, more height or an amplifier. With permission, just tune the rig to a wide coverage repeater (Run repeater clubs patch from a home). Connects to any rig so use it with a spare. Multiple volume adjustments (mobile to land,Land to Mobile,CW volume,DTMF volume ect.),and BUILT-IN keypad. Of course CW ID makes it legal. Dispach and selective calling too. It's your choice, you are the control operator. Plus a long list of other professional features. Imaculate

$159 - Mother board PENTIUM 90 mhz, PCI & ISA bus with CPU and fan. Upgrade your olde today. Takes 72 pin memory. (see PCI card below). like new.

$69 - Card - SVGA PCI high quality video. $49 with above motherboad!

$29 - 14.4K fax modem with manuals

It is interesting to note that all of you guys who have replied to this twerp over in the Far East somewhere, have inadvertently propogated his message, which was "HRO catalog of lies". I don't think I saw anyone agree with this mental midget but the header always said "HRO catalog of lies". Kind of a wrong message being sent in error.

Story: Hear the one about the lady who walked into the meat market and saw a sign advertising chicken for $.79 a pound. She tells the butcher "that's kinda high isn't it. Matt's meats down the block has chicken for $.29 a pound." The butcher replies "Well you should go down to Matts and buy some!" The lady says disgustedly "I tried but he was all out" The butcher looked her right in the face and says "Well lady, if I was all out, I'd have it for $.29 a pound too!"

When this pencil necked geek over seas found out that nobody had the filter he wanted except HRO ... he could have objected to the $4.00 higher price by not buying it. Noooo. Instead he pays it and then gripes all over the internet about the $4.00 and the extra postage it took to get it to him. I wonder what he paid in phone calls asking if someone had it in stock?

Hi everyone:

I've been giving this some thought and I thought it would at least be worth considering. I'm BIG into QRP, but since I'm still a no-code techie, I thought I'd try doing a rather somewhat unique form of QRP.

I have a RS TRC-502 49 Mhz. transceiver that I'd like to convert into 6 meter FM simplex. Now given the band's most recent activity over the last year or two, coupled with the fact we are starting to get back up on the upside of the sunspot cycle, I thought I'd at least give it a try.

My problem is finding places that sell 6 meter conversion kits (with CTCSS tone board) and 6 meter crystals. Anyone have any ideas as to where I might go in order to get these parts???

My rationale for wanting the tone board is that here in the Denver area, 52.525 Mhz is now linked to a 440 Mhz. repeater that gets a fair amount of use, but the repeater is now PL'd.

Any ideas, useful tips and other such information would be greatly appreciated!! :-)

I look forward to your replies!! :-)

73's for now my friends!! :-)

You have run across the "Kenwood Syndrome"... did not realize it applies to Yaesu as well... there are TWO 8-pin DIN plugs out there in the world... you got the OTHER one, same as the back end of my Kenwood TS-940

You can look at hamfests for years (never did find one), you can order plug from Kenwood or Yaesu, or you can "convince" your plug to move the two oddball pins by heating the pins with soldering iron until they shift. But be careful, as the pins can also misalign or shorten/lengthen... it requires more skill and patience than I have.... had to scrifice a few before I got it right

Hi David...
Try RF Parts at 1-800-RF-PARTS in San Marcos, Ca.

New transistors might not be as expensive as you think.

Allan

Source record: 177724

Hi Steve,

The TM-V7 can act as a repeater/crossband after the necessary modifications (removing and adding a resistor). This mod will also enable extended RX/TX.

The difference between the TM-V7A and TM-V7E is that the first is a USA version, the second a European version. (ex. limited frequency range, 2m is 144-146 in Belgium)

Kind regards,
Paul - ON1DJU

1079. FAQ: Plectron and Motorola Alert Monitor Receivers

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-14 00:00:00 UTC
From: parnass@bell-labs.com
Message-ID: <5it8ko$107@ssbunews.ih.lucent.com>

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair service for the Plectron P1 and R700 models is
offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal
Signal in University Park, IL, phone (800)524-3021. You
can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone
(800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

For Sale:

Used power transformer for Kenwood TS-520/S/SE transceiver.

I bought it from a Kenwood service center in Dallas, but it turned out
that I didn't need it after all. It's in clean, in good shape, and is
ready to install in your rig.

This would also be a great transformer for a p/s for your homebrew
200 Watt class transmitter! The high B+, when voltage-doubled with
100 uF over 100 uF, is 950 VDC (no load). There are also low B+
windings that give about 300 VDC, 200 VDC, 100 VDC, and a negative
bias supply. Filament supply is 12.6 VAC. Primary is 115/230 VAC.
It was designed to power a 12BY7A and two 6146s, plus the 12 VDC
of the rest of the transceiver.

It may also work in the TS-820/S but I'm not sure about this.

Price is $60 (exactly what I paid for it) plus shipping from 762xx.
I'm told that brand new ones are $125 each (if still available).

Email me if you're interested in this nice transformer.

73,
Dean K5DH

Very shortly after transistors became available to the public,
there were a number of articles on how to add a transistor
amplifier to a crystal set to provide increased audio output.

In 1957 I bought a four transistor broadcast band radio just
before going overseas in the Air Force. It used a 22.5 volt
hearing aid battery costing $1.50 for about 8 hours operation.

There were a few others on the market before that time, but
they were all very expensive to buy. While expensive by todays
standards, they were a lot cheaper to operate that the tube type
portable radios with their "A" and "B" and sometimes "C" batteries.

I would suspect that the military probably had the first all
transistor radios receivers. Transistors were used in the low
level stages of transmitters for many years with vacuum tubes used
in the higher power stages.

So what was really the first transistor radio, Heck, I don't know.

From: dbr@alumnae.caltech.edu
Message-ID: <5iu2ur$ata@gap.cco.caltech.edu>
Source record: 177833

Hi -- we have a GE Mastr II repeater, 100 W UHF version -- and the transistors may be on the way out in the PA -- Rather than pay GE some huge amount, I wondered if anyone had any for sale for a reasonable price -- prefer never soldered

This is GE P/N 19 A134 171 P2 "Silicon NPN sim to Type 2N5945" -- it is a 25 or 30 watt ceramic capped transistor made to be torqued to a heat sink with big tabs for collector and emitter.

We could use four to have around as spares -- just in case.

Thanks
Dave N7UE

To Larry Robison W9MDX

Before you start calling someone a twerp you should check your facts.

$20.00 for about a 4 oz package from Ca to Dallas TX is a little high in anyones book

Even snail mail would be about $5.00

As for Ted"s comments about HRO catagologue lying how is it that the AES "Reg" price in their catalogue is the same as HRO sug retail. I guess Ted pays sticker price for his car. Get real Ted they all do it.

My experience with HRO has varied. Their Denver store has been superb, I would never do business with the Anaheim store.

1102. Looking for Best General Coverage Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-14 00:00:00 UTC
From: desharnais@birdie.enet.dec.com
Message-ID: <861042218.4466@dejanews.com>
Source record: 177840
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.equipment

I'm a licensed ham and avid shortwave listener. Currently, my license doesn't cover the HF band, but I do plan on upgrading in the future.

I had been looking around for a good table top shortwave receiver, but decided to get a tranciever instead. The prices don't seem to differ much and I would be getting transmitting capability as a plus. Since I will be using the rig mostly for shortwave, I need an HF rig with a really good general coverage receiver as a primary consideration, with transmitting capabilities being secondary.

Can anyone offer advice or recommendations on which HF tranciever offers the best general coverage receiver up to 30 khz? Do any of the trancievers offer the same quality reception as what you would find with a good shortwave table top radio?

As for price, I would be willing to go as high as $1500, but something around $1000 would be more palatable. :)

Regards,
Denis

Denis,

I have been very happy with the receive section of the Drake TR7 series. This is a 15 year old radio but its performance is very very good. The receive section is strong with good bandwidth selectivity. That receive section is just about the same as is on the R7A from Drake and most SWL's would rank the R7A in any top 5. Transmit section is very good. You should be able to get one for under 700 with power supply, speaker and remote VFO.

Good luck

Mark

Kenwood offers a 1 year warranty on all new equipment. If your next door
neighbors name happens to be Murphy and he visits after you purchased a
Kenwood Amateur product I would be pleased to repair it for you with the
only cost being the shipping to us.

Just as a note Yaesu also has a 1 year warranty but I don't deal with
Yaesu so cannot tell you who could fix it.

Either way you go you shouldn't have any problems as the new radios are
extremely reliable.

Hello all

Due to business and personal commitments, I can no longer maintain and grow the Aussie Winpack Page. I have moved from Sydney to Perth (vk2 -> vk6) and can no longer justify paying the ISP costs when I can't get access to it !

Its been a lot of fun over the last 2 years, in total I think the pages have over 30,000 hits. The links to the pages are growing daily and it is unfortunate that I have to close them.

There are now a number of other web sites carrying the servers and I see that G4IDE has his own web page. If you read packet bullitens, there are also a number of CLOWNS broadcasting 8kb packet messages telling you about their pages, bit of an ego trip I think !!

Thanks to Mick in the UK for his support with lots of software and also thanks to Ken, the Taranaki terror for most of the tpk stuff.

If anyone wants to carry on with the page in its format, varied format or anything else, please take the files and use them......

Cheers..Pete..vk2yx

The ET-58-F is a GE Mastr Pro VHF highband transmitter. Original specs
are for up to 90W out between 150-174 MHz, but they should swing down
to 2m just fine. Final tube is a 5894 I've got a few now that I'm
using for T-hunt transmitters. I have a manual for the ET-57, which is
the lower power 35 watt version; I can copy this if you need one (rest
of group?)... The F is the revision number (My ET-58's are mostly A's
and C's, so you've got newer ones.)

The ER-41-C is the receiver counterpart to the transmitter. They can
swing down too without too much trouble.
Got the manual for this too, but also there was an article in 73
magazine January '95, pages 24-30 about tuning up and using these
receivers without the bulky power supply.

Hope this helps you out. I've also have some extra control heads and
power cables if you need 'em.

73....Mike, N3KEV

Check the *duplicate* mic connector on the *back* of the 706- if something
small and conductive gets in there, it can key up the transmitter (and be
pretty hard to find).

Ten Tec's problem is that most amateurs today do not know how to
evaluate a rig's performance. Instead of dynamic range, phase noise,
blocking range etc, they're concerned about the number of memories and
the color of the cabinet. If they did know how to evaluate a rig,
they're would be far fewer off shore boxes adorning hamshacks and a lot
more T-T.

Now you're trying to confuse him with facts, aren't you? He can't relate
to facts very well, apparently.

1114. Re: First Transistor Radio?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-14 00:00:00 UTC
From: stephen scheel <sncscheel@hypercon.com>
Message-ID: <33530BA5.2B86@hypercon.com>
Source record: 177852

The worlds first transistor radio was made in the US by Regency. The TR1 radio was rushed to market by Regency in Late 1954 to make the Christmas season. A few month's later Raytheon came out with the 8TP1. The TR1 was a small shirt pocket (almost) sized 4 transistor set which sold for 49.95 and is a very poor performing radio. However, today these radios are highly sought after by collectors such as myself. I own 3 of them but would always like ones in colors I don't have. If you have one of these let me know I might be interested in purchasing it from you.Carl

1115. Help with Kenwood TH-28A

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-14 00:00:00 UTC
From: gmccormi@isn.net
Message-ID: <gmccormi.12.001733C6@isn.net>
Source record: 177853

I recently purchesed a used Kenwood TH-28A. I made the receiver modifications (extended UHF rcv) following the instructions posted on ftp.barc.org. I've now run into a problem in that the display is locked on CH 5 (memory channel 5 - the only one I had programmed at the time).

I cannot get the thing to go to call, vfo, anything. It just sits there displaying CH 5. I know I can rotate through the memory channels, yet the only one I have programmed is 5 so I have no where to go.

Its possible that I might have scratched the trace running underneath diode 9, this occured during the mod. Would this have anything to do with it. The radio worked fine (vfo, call channel), transmitted fine, everything was normal.

Does anyone have a suggestion? I though about erasing the memory, but the method included in the manual is locked out.

Thanks for all your help,

73,
Greg VY2GWM

His original appeal was to Christian *believers* to pray for it to work out. If those who read the post didn't fit into that group than they need not respond. I would suggest that you cut him some slack and not waste any more bandwidth on it. Perhaps the post is more appropriate in a Christian newsgroup. I suspect he'll do that next time.

Being a Christian, I understand where he is coming from. I suspect there are others in the newsgroup who feel the same. I'd be happy for him or others to mail me on these issues to keep from flooding the newsgroup.

Thanks.

Rudy,

I've owned both rigs, and posted a detailed comparison of the two
perhaps 6 weeks ago on this newsgroup. If you go to Deja News
(www.dejanews.com) and do a search on this group for the text "DX-70TH"
you should have no problem finding my post.

Bottom line: The Alinco blows away the Icom.

Good point on the back connector. I have had mine (the one with the
noisy fan, hi) for about a year, and I usually vacuum out the right
holes, as fur tends to grow on it. I wonder if I should glue some sort
of mesh onto the sides to keep this from happening. Any one out there
found this happening? and what did you do to correct this?

Greetings. I am looking for a used HAM IV rotor and controller in good condition with cabling, if available. Any other comparable rotor that can handle a 10 sq. ft. wind load will be considered, also. I must place an old corroded Hy-Gain EX-14 10-40M yagi on a tubular tower that supports 10 sq. ft. of wind load, and the antenna is rated at about 8.3 sq. ft. of load. If you have an appropriate rotor in need of a home, or you have a positive suggestion, please reply at your convenience.

:Thanks, Bob, AB4G

The FM wide filter is too narrow and results in high distortion.
In Australia the TV audio deviation is not as wide as FM radio so
that TV sound is usable with some distortion and FM radio is almost
completly unusable.

Hi,
I forgot to tell you that this radio is a kind of a clone of the
original Motorola. I think it is a M400 Radius or something. Do you
think it would conntinue to work?

There is a software with the radio that allows you to manipulate
different settings of the radio. Will the software work after you
reprogram it?

thank you for any answer

Anyone know a company that sells mil grade 2m repeater? I'm part of a amateur satellite project that's trying to get started and I want to put a mode A voice repeater on it. I have the downconverter, just need the repeater. Something that can stand extreme temps and its power can be computer controlled with a minimum of .75 watts would be great. E-mail me directly if you have any input.

snip

You had better take another look at your AES catalog. They also have the
list
prices as:

C156A $289.00 same as HRO
C228A $695.00 same as HRO

Selling prices:
C156A $199.95 same as HRO
C228A $599.95 $20.00 higher than HRO

From: cstimson@hookup.net
Message-ID: <5isb20ktt1@loki.tor.hookup.net>
Source record: 177902

Greetings,

I would be interested in hearing from any HTX404 owners regarding
your experiences with power output at different input voltages.

At voltages > 12 volts the power output should be a "nominal 5 watts"
I measured 3 watts at 12.6 V from a Gell cell.

The alkaline pack @ 9 volts should output 2.5 watts. I measured 1
watt. The batteries are fresh too.

I just purchased the unit for a good price (almost 50% off) using a
coupon supplied by the The Canadian Amateur. The Ni-Cad is still
charging but I don't expect the output to be at spec. either. The
manual does state the specs are nominal and individual units
performance may vary but this seems a little off. Maybe I got a dud??

1147. FT1000MP clicks!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-14 00:00:00 UTC
From: Terence Hadley <terry@rydal.demon.co.uk>
Message-ID: <5DIZGAAV5gUzEwyA@rydal.demon.co.uk>
Source record: 177910

I have recently purchased a Yaesu FT1000MP and have been very happy with it so far. However, while tuning round on a very quiet band the other night I heard a very definate click in the speaker while tuning between particular frequency steps. You do not notice the click if signals are present, the signal seems to mask the click. The clicks must be generated quite late in the receiver because they are still audible (and indeed emphasised) with the RF gain at minimum.

On investigating the frequencies concerned I found that the clicks occur at regular intervals. I thought at first that they were sub-multiples of the second IF of 8.25MHz because they are roughly 82KHz apart. The actual spacing between clicks turned out to be 81.92KHz so this does not tally exactly with the IF frequency.

Some spot frequencies to try are between 14.008.31 and 14.008.32, between 14.090.23 and 14.090.24 and between 14.172.15 and 14.172.16.

The clicks are not really a problem as they are not even noticable when signals are present but I would be very interested to find out more about them. Does anyone else with an FT1000MP get the same effect? Is it something that is already known about? Is it a result of the particular configuration of my rigs menus? if so what do I do to rectify the problem.

Any and all comments welcome.

Make sure that the AIP is on, it seems to help with a minor loss in sensitivity. It even clips most of the crud in the SF Bay Area! What it doesn't get, the PL decoder does (though the entire Kenwood like could have a more sensitive PL DEcoder).

> I have not tried the 9600 baud packet port.

I tried it for a few days last year, the TNC didn't get enough audio to decode, but it sent data quite well.

> I have had it install as a mobile since the fall of 1994 with **no**
> problems, including starting up cold in the Canadian winter at -30C. I
> would not hesitate to recommend one.

After a few years of service in my shack, one of my 732's lost a power module, on one band only. I have other older Kenwoods that are still plugging away, daily use too.

> sensitive, the less selective an RXvr will be.

True. What I should have said in this case is that the creeping crud
from pagers etc. wipe out the front end easier in the V7 than the 733.
And in the V7, it even manages to slip past the PL decoder.

> I have three friends that have had a legacy of problems with Kenwood
> gear. It's basically cheap communications IMO.

And I on the other hand have several pieces of Kenwood and have less
trouble with them than the Icoms I used to use (only one left and I keep
it because a new VHF multimode radio is very costly)

1157. IC-756 ANOTHER DOT CHOPPER

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-15 00:00:00 UTC
From: Steve Ellington <n4lq@iglou.com>
Message-ID: <3352DC08.3CF9@iglou.com>
Source record: 177733

The May issue of QST has an excellent review of the IC-756. However, Icom has produced yet another DOT CHOPPER. The article downplays the flaw by saying it's of less importance but to a cw buff, it's very important. The keying waveform shows the first dit to be totally mangled and the rest to be chopped by about 50%. The internal keyer adjustments have insufficient range to compensate for the chopping.

Yes,some these new $3000 rigs have nice sounding receivers but don't produce any better cw on transmitt than a 40 year old HeathKit DX-20. Why is it so difficult?

Yes, it is possible to do that. Works fine too.

Be warned that it does NOT have a Mute function like earlier models nor does it have a clone feature (at least as far as anyone can find, but there is a company that is working on a computer interface for cloning or programming).

> Also whats the different between the TM-V7A and the TM-V7A/E?

The A is for US delivery, the E is for European delivery. The bands are slightly different in each place and the PL/burst tones are too.

> sail boat. Is it best to keep them up or let them deep cycle?

Never, NEVER let a gel-cel "deep-cycle"! They're not designed for it! If you're really concerned about their health, keep a trickle charger on them. I have one that runs a Uninterruptible Power Supply for my BBS, it sits at 13.84 vdc when it's fully charged and ready to work.

As I understand the construction of most gel-cel's, they are similar to automotive batteries in that they can produce a healthy burst of power for a short time, but they are not so great at producing a small amount of power for a long time. They'll do it, for a few times, but if you constantly deep-cycle a gel-cel, you'll come close to ruining it in a few weeks. The gel-cel I just mentioned, it's a 1991 battery, 26 AH, still works when needed... :-)

Ray

What you need to do is find all the " 73 " magazines from the period
of 1975 to 1989 you can dig up. I'll bet there over 100 articles
telling how to better program the 22S. There were guys building diode
matrix programmers in left over shoes.

Hello Folks:
Anyone check out the new Yaesu FT-920. Continuously adjustable HI/LO/Band Pass filtering (DSP), 6 meters, etc. etc. etc. Looks great, street price under 1800.00 . I was considering the IC756, but after seeing this baby, I don't think so. The DSP offers much more, and its about $500.00 less. Hate to say it, but time to switch from Kenwood to Yaesu (again).

73 all, Mike - WQ0N

As a longtime cat lover, I can't let this pass..... Un-neutered male
cats will indeed "spray" to mark their territory, but if they're
neutered before they are mature, they won't. Best of all, get a
neutered female. I've had several over the years and they are a
nearly perfect pet. And completely odorless.

Ok, back to radio stuff.

Bill, we built a bunch of them in Korea to put at the army radar sites in the DMZ. The radar ops were a lot better at reading the parameters from the super deluxe Heath read-outs than manually computing coded "observations." Good luck in your search. Brian

TEN TEC is pretty pricey for what you get compaired to the Rice Boxes.
I feel that is the sole reason for the success of Yaesu, Kenwood, Icom.

1172. Radio Shack HTX-204

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-15 00:00:00 UTC
From: Craig Ayres-Sevier <casevier@ka7syc.reno.nv.us>
Message-ID: <01bc495f$d8bb3700$efa25ecc@KA7SYC.reno.nv.us>
Source record: 177748

Hi, all:

Recently finding myself sans HT, and sensibly trying (and failing miserably) to go without after, oh, 13 years of that constant capability, I reluctantly availed myself of my RShack credit card and impulse-bought the HTX-204 about a week ago.

I am no fan of RShack. I don't know anyone who is. In my eyes, the only product of substance that they ever marketed was the PRO-2006. After that, pretty cheesey. Thus I made the purchase with considerable trepidation, meekly going to my fate. "Must... have... HT. Can't... live.. without."

Well, after a week's use and seeing a few of the posts in this regard, I thought I'd contribute my conclusion: the HTX-204 is a bi-polar marriage of economics and technology.

Like others who have posted on this subject, I, too, would say it's a good radio. I wouldn't go so far as "pretty good," though, mainly because the casing design is fairly outdated (can we forever ban those War of the Worlds control knobs?).

The keypad, though, is a perfect size, but still there's no reason why the rest of the radio has to be the size this radio is.

Plus, it's overpriced. I learned after I bought it that it is essentially the same radio sold by ADI for about >a hundred bucks less<. Only difference I can tell is the nameplate, and frankly, I would have preferred having to look at ADI's unobtrusive logo rather than "Radio Shack" (what a name) every time I pick up my HT.

And, yes, I got the usual song-and-dance from the store. "This is very important: Can I get a 5-watt battery for this?" "Yes." Guess what. They do indeed mention it in the manual, but a week later, per the same store -- even the same individual -- there's no such thing. Dead pause for about a minute of serious eye contact. "Uh -- I mean, 'yet.' " Uh-huh. Duly noted, pal.

But I should also note that these are my only complaints about the radio; mostly personal habit and prejudice. The actual operation of the thing is an intuitive breeze, even though it's fairly full-featured.

Both programming and operation are very straight-forward. This I could not say about my "real" dual-band, a Kenwood TH-78A which sported superb ergonomics, bells, whistles and marmalade -- but the manual was never far away, plus soldering on eensy-weensey boards [and voiding of the warranty] was required to receive non-amateur public safety.

But, my friends, getting out on 5 watts was a given. Too bad all RShack's offered is a pretty iffy 2-watt power source. Add the poor antenna to a situation where you need 5 watts, and you have a $400 paperweight.

Yet while we're in the out-of-the-box dept., it is here that the radio betrays its benevolent (what I like to call its "less evil") side: ready-to-go extended receive. I don't think any other HT on the market covers this much receive spectrum, including the Yaesu FT-50R.

And the display is literally state-of-the-art: the dot matrix can be easily read from any angle and the illumination is significant. I think (and again I could be wrong, but it's my impression so far) that the only other "real" amateur radio manufacturer presently using dot-matrix is Kenwood with their latest (but still frequency-anemic) offerings.

So. The HTX-204? Not a "bad" radio. Just underpowered, overpriced, unsupported and, if this is a detriment to some, >very< Radio Shack-looking (but it features nicely extended receive with a crisp display).

And cringe though I might at the mentality that would fail to rethink "shack" as a desirable word association for one's products, I can live with packing it on my belt whenever I leave the house -- "whenever" being poignantly defined as being up until the moment that someone answers my ad in the paper and buys it, whereupon I shall be applying the funds toward a radio more to my liking (OK, less Radio Shack-looking), but more importantly, manufactured by a company that has a better commitment to support and options >already< in place. What a concept.

Sure, I knew the RShack rep going in. But call me an eternal optimist of the "surely they must have gotten better by NOW" variety. And it was after all my irrational need to always have an HT close at hand that was no match for my nonexistent will power (damned credit cards); thus it was a lesson brimming with reckless enlightenment (and happy for it).

I would suggest that they change their slogan, however, to "You've got questions? We don't know."

Thoughts anyone? Be nice now.. ;)

For Sale. This is the last box!!!!!

One case of 50 Drill Bits
Fine Grain Precision Metal Carbide Bits #57
Perfect for P.C. Boarding electronic components.
This is the good for those of you who prototype a lot.
Normally, they sell for a couple dollars each!!!
I will sell it for $20 plus $3 for s & h.

#57 Bits are approximately 1mm +- .2 mm
They are the right size for fitting IC chips, sockets, resistors, and
capacitors.
For any questions, please reply to:

>> Is this connector special? Are there two different standards for
>> 8-pin DIN connectors? Are these strange connectors available
>> somewhere?
>>
>> - Tom, N5EG

Yes sir, there are two different 8-pin round connectors normed in
German Institute for Norming (aka DIN):

DIN 41524 ("horse shoe-like form od 7 pins, 1 in middle)
DIN 45326 (7 pins "well placed" on a circle, 1 in the middle)

prizing: from 2.18 DM (+ tax) each (standard plastic) to about 20DM
(full metal AMP, 90deg. edge)

1$=1.70DM

Waldek, DL7ANQ && SO6ANQ

PS
nice to have at least one stupid connector cheaper than in USA, :-))))

1181. FS: Icom IC-740

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-15 00:00:00 UTC
From: zaax@aol.com
Message-ID: <19970415121000.IAA29555@ladder01.news.aol.com>
Source record: 177757

I have an Icom IC-740 HF transceiver for sale. It has every possible
option
installed including crystal filters. It puts out 100 watts CW, SSB,
RTTY/Amtor and FM on all HF bands 160-10 metres. Included in the radio are
the following accessories: PS-35 internal power supply, EX-241 marker
unit, EX-242 FM unit, EX-243 electronic keyer, FL-44 2.4khz SSB filter,
FL-45 500hz CW filter (9mhz), FL-52 500hz CW filter (455khz). This radio
has an excellent receiver comparable to the Icom IC-761. It has IF shift,
passband tuning, and a notch filter. Check out these specs; minimum signal
-133db, blocking dynamic range 130db, 2 tone 3rd order IMD dynamic range
95 db and a 3rd order intercept of +9.5 db. Some other features of the rig
are; overload proof receiver, dual vfo's, transverter ready. Also included
with the rig are; hand mic with Heil element, AC and DC power cables,
service manual, user manual, reviews and accessory plug. This radio makes
a great base or portable rig perfect for Field Day as it runs off both AC
and DC WITHOUT and external power supply. I am the original owner and a
non-smoker. I am asking $675.00 for all of the above which includes
shipping. If you live near Detroit and would like to pick it up I
will include a nice hard case for the radio. I will also deliver it within
50 miles of
Detroit.

Please note that in spite of the embarrassment that comes with doing so, I have publicly posted this reply to HRO in the above newsgroups to help rectify the confusion of this situation.

On Mon, 14 Apr 1997, clw wrote:

>
> WHAT IS YOUR AGENDA?

My agenda WAS to expose what I was mislead to perceive as deceit, at no fault of my own,(which I fully explain below).

But NOW my agenda here is to publicly apologize and retract my statements about HRO now that I have found out who was really responsible for the misinformation... namely Standard Radio.

> A.) You stated in your Usenet posting that the factory suggested prices

> quoted in your posting are as follows:

> C156A $289.00
> C228A $695.00
> These prices have been valid since July 18, 1996.

But they were NOT on the price list I saw on Standard's webpage! Only the lower price was. And that is how this whole mess ot started. See my further explanation below.

> Where did you obtain your "Standard says" information?

From the misleading price list on Standard's webpage which they have since changed.

> I will grant you the fact that the HRO catalog shows $289.95 and
> $695.95, respectively. Are you upset over 95 cents?
>
> B.) You stated in your posting that "if you want to pat a company on

> FACT:
> I will not make any comments regarding Ten-Tec. Why didn't you look
> in the Winter 96/97 AES catalog, on page 21? They show the following
> regular prices, for the Standard radios, you quoted:
> C156A $289.00
> C228A $695.00

I found this out from a friend who brought it to my attention after seeing my post about HRO. Since I do not have AES's catalog in hardcopy I was not aware of this because their prices on the AES website only list ONE price... which is the MSRP that I've recently learned that Standard has called a "street price", which, technically, is a SECOND MSRP, even if Standard did give it another name. I explain that further below also.

> C.) You also stated, in part, "...they are so big that they can afford
> to be straight with us but I guess maybe greed has blinded them to the
> fact that hams are not stupid and we eventually find out when a company
> is full of crap."

> publish information that is accurate. Catalogs are prepared in advance
> of the published date, with diligence, however, with the fluctuating
> World money markets, prices do change. We encourage our customers to
> call us for pricing. How did you "find out when a company is full of
> crap."? You did not check the Internet, Standard does not post MSRP on
> their Web pages.

Standard's "street price" indeed IS an "MSRP" whether they want to call it that or not. They are a manufacturer. Standard's "street price" is a suggestion from them to retailers of what price to actually sell the radio for. Therefore it is natural to deduce that their "street price"

DOES fit the concept of an "MSRP". Since Standard's pricelist on
their webpage only listed their "street price" without ever
mentioning that there was also a higher "MSRP", THAT is how I was mislead
into thinking that HRO was inventing prices in their catalog. And it
wasn't just me. I am sure that Mr. Hershman and anyone else who came to
the same conclusion are not stupid people either. But one does not have
to be stupid to be mislead and misinformed at no fault of their own.

> You did not contact Standard.

Logging onto their website is contacting them. I shouldn't need to HUNT
any further for the fact that they have TWO prices on their products. The
fact that they ommitted that information constitutes an inaccuracy on
Standard's part, and that is not my fault, although I am sorry about the
results that it caused.

> You did not consult the AES catalog. WHERE DID YOU GET YOUR DEFINITIVE
> INFORMATION?

I consulted their online catalog because I did not have one in hardcopy.
I can not be held responsible for AES failing to make sure that the
information on their website catalog accurately reflected the information
in their hardcopy catalog. I was not the author of the AES website, nor of
Standard's.

> D.) In your April 13, 1997 newsgroup posting, in response to Larry
> Robinson, you said, in part, "Quit defending somethin (sic) that has no
> defense. If they lied then they lied. End of story. Just for the hope
> of curing your ignorance, I'll repost my original message for you to
> read. ... all of their websites can be accessed thru mine." Further, in
> your April 13, 1997 response to WB0NZV, you said, in part, "Am I the
> only consumer who does his "homework' out here? Or are most of you too
> rich to care?"
>
> FACT:
> You did not verify your claims with Standard Amateur Radio Products.

WRONG! I did verify it by looking at the price list on Standards webpage
and on that price list was only ONE price per product and that price was
identical to your "Discount price". It is not my fault if Standard's
webpage was misleading. Standard recently changed this entirely, because
the price list I saw is no longer there. In fact, they seem to have
redone the entire HT section of their website. It is not at all as I
remember it.

> The statement, "All this in a Standard -for under $200 USD!", that you
> see on their web page is not the MSRP for the C156A. WHERE DID YOU GET
> YOUR DEFINITIVE INFORMATION? IN FACT, you did NOT do your homework.
> Once again, you are making false, misleading, and libelous remarks.

I don't care what kind of buzzwords someone invents. IF a manufacturer
suggests a price for a retailer to sell a product at then that IS an MSRP.

I now realize that Standard has TWO different MSRP's, BUT they call the lower of the two a "street price". But notwithstanding, since they the manufacturer suggest that you the retailer sell their product at this "street price" then the "street price" does indeed, by normal logic, fit the definition of a "Manufacturer's Suggested Retail Price". Again, at no fault of either your company and at no fault of my own. I now see that the one responsible for this confusion is Standard for having TWO MSRP's and trying to disguise that fact by calling one of them a "street price".

> Your repost on April 13, 1997 reinforces your intent.

My only intent was to expose what appeared to be trickery. However, as I have explained above, the trickery has turned out to be not on the part of HRO and that is wy I am now publicly retracting my error,(which I assure you WAS an honest mistake made with noble intentions),

> E.) Since Mr. Hershman, responding to your inaccurate remarks, also
> made false claims, I will direct the following remarks to him. Mr.
> Hershman said, in part, "I just checked out Ted's comments in the HRO
> catalogue and he is abolutely (sic)true".

> FACT:
> Mr. Hershman did email Roger Wayman, at Standard Amateur Radio
> Products, regarding the MSRP for the C156A. Roger Wayman responded with
> the MSRP of $289.00. . WHERE DID YOU GET YOUR DEFINITIVE INFORMATION?

Too bad Rodger Wayman didn't put that info on Standard's website BEFORE I read it, because if he had, none of this mess would have even occured! And THAT is a FACT!

> You "de facto" lied, you did not publish the MSRP that you received from
> Standard. WHAT IS YOUR AGENDA, MR. HERSHMAN? You are disseminating
> false, misleading, and libelous remarks.
>
> F.) Mr. Hershman states, in part, "If HRO keeps buying up the small

> come to HRO with offers to have us buy them out. In every case their
> decision to go out of business was already made prior to their
> approaching HRO. Nine out of ten times we do not purchase their assets.

It matters not to the comsumer who solicited who. What matters to the consumer is how much it ends up costin US. Ham radio was never intended to be a "rich man's hobby" and all those who have contributed to turning ham radio into a "rich man's hobby" are the most responsible, in my personal opinion, for murdering the "spirit" of ham radio. That opinion is not directed exclusively at HRO or any one company. The manufacturer's are as culpable as any retailers, if not more. It's not uncommon for radios to retail at 3 or 4 times what it costs to mass-produce them! I'm all for free enterprize but when the markup from the cost of making the

rig and the final price gets that huge, we the buyer quite naturally feel like we're being royally screwed. And why shouldn't we? $200-$1000 or more for a damned walkie-talkie??? Some of which have little more features than a $40 CB radio??? Geez guys, GIVE US A BREAK!!! At this rate, it seems it won't be long before only Ross Perot can afford to buy a rig!

> In summary, HRO welcomes constructive criticism. As active hams we

> Ham Radio Outlet

By the way, I thank you for taking a moment from your busy schedule to respond to this matter personally and for saying it as you meant it. I highly respect a person who says what he means and means what he says, even if you may have been blunt, which is both understandable and respectable and since you have been so straightforward about it I now regard HRO with considerabley more respect than previously and will be sure to let others know that I feel that way.

I was mislead and misinformed and I apologize for the results that came about as a result of it. If you have read my postings in usenet in the past then you know it takes alot for me to say that. I have a lot of pride and am a very headstrong person and yet if I was wrong, that is not something to be proud of so I can and do apologize when I am shown that I was wrong, because when you get right down to it, it's better to be right than to be proud and I am grateful that I've been blessed with enough sense to know that.

I totally retract what I said about HRO's prices and not because I am afraid of being sued,(after all, none of you know who the hell I am), but because it is the right thing to do and because I passionately HATE when I am wrong... it's embarrassing as hell, even when it wasn't my fault. like any falable human being, I am quite capable of putting my OWN foot in my mouth and I didn't expect or want any help from Standard! I resent their having done so.

I must also say that the embarrassment that this has caused me makes me want to never buy a product from Standard Radio again unless I buy it used, because then an individual ham will get my money, not Standard.

Let me say it plainly and clearly:

I was WRONG and I retract what I said about HRO's pricing on Standard's radios and I sincerely apologize to and ask the forgiveness of HRO and all of you who read these newsgroups for posting the same misinformation that was given to me, which I did not know was incorrect at the time. I hope that this apology, explanation and retraction is satisfactory because it's the best I can do and it has caused me undue embarrassment, which I can assure you is NOT something that I take lightly! To be blunt, I am extremely pissed at Standard for this. I feel that Standard owes us

all an apology!

It's bad enough that some of Standard's radios have been deliberately redesigned in a manner that compels the consumers to buy more accessories from Standard in order to make the use of said radios more practical and more comfortable,(the C156A was designed in a way that makes it totally uncomfortable and impractical to use without a speaker/mic and external power source). Such proprietary design is something any normal person would find offensive, because you go in thinging you'll spend $199.95 plus tax, if any, and end up having to spend over $300 to use the blasted thing and even then the power cord won't stay in the radio's jack! I'll be very happy when Uniden comes out with a line of ham rigs again.

But I've said all of this before as have others and the point of this message was not to critique Standard's rigs, but to clear up this confusion with HRO. I hope I have done so and I ask that HRO forgive me for having a very natural human reaction to what info was on Standard's website.

A final comment:

This dual-pricing from the manufacturer seems as if it was designed to confuse people and regretfully, that is just what it has done. If there is one thing this world doesn't need, it is more confusion than it has already... especially since the amateur radio hobby is SUPPOSED to be about COMMUNICATION!

Now if you will all excuse me I have to go wash the taste of foot out of my mouth.

You're right of course. I had never used that feature on any of the
Kenwoods that I own. Now if there was some way to make the commands
stick in the mind or be more logical... <:

> called Valley. It's ancient history, I'm afraid.
--
Yep! I still have my old IC-22S also. It has the Valley Instrument
Products VIP kit installed. It was a replacement switch that provided
28 repeater pairs and 11 simplex frequencies. There were two optional
toggle switches that mounted in the case screw holes below the rotary
switch. The VIP-600 option provided simplex operation 600 khz above the
indicated frequency and the VIP-15 option that provided 15khz split
channels, 15 khz above the indicated frequency.

It wasn't "ALL" 2 meter channels as advertised but it did a pretty good
job of covering the available frequencies.

I bought the unit,from the guy who manufactured them, at a hamfest
outside of Chicago in 1978. He worked for a switch manufacturer and had
his company manke him up a bunch of switches. He was selling them by
mail and out of the back of his car. His name was Ted M. Nevins, Jr.
I don't know if he was a ham or not.

His address at that time was:
Valley Instrument Products
P.O. Box 339
Bartlett, IL 60103

Maybe he still has some units stored in his basement.

Look up the instructions for putting it in channel mode. There is a mod
to keep it that way. You have inadvertently done the channel mode mod.

Dennis. You ask a really tough question. There a lot of good rigs out there that have receivers probably better than any desk top swl radio you will find. There are a lot of things to consider in a receiver as far as performance goes - convenience features and flexability, quietness, agc action, audio quality, imd performance, sensitivity, dynamic range, selectivity/filtering, passband adjustment controls, maybe even dsp features on some of the new rigs. You will be able to find a top notch rig in your price range. If you don't mind buying a used rig there are a lot of bargains out there right now because a lot of us are trading off our old stuff to buy a new dsp rig. Others will argue but I think for the money the Kenwood TS850SAT is a great rig with a fabulous receiver. You would need at least a 20 amp 12 volt power supply for this rig though, but almost all hams end up with one in their shack sooner or later anyhow and they are not that expensive. They were on closeout new for $1499 and can be easily found used for around $1100. AES in Milwaukee has some used right now for I think about $1199, but they offer a 10 day trail period and a warranty. I still have mine as a backup radio to my FT1000MP. Good luck in your quest! --- Steve N9ROU

Can anyone out there can tell me what Belden 9862 Coax Cable is used for? It's larger than RG58 but smaller than RG6. It has a very good copper shield, and solid center conductor with a small strand of plastic wrapped around the center conductor.

This is what is labled on the outside jacket of the cable.
Belden 9862 M17-030-RGO62 MIL-C-17E 16428 AWM STYLE 1478 VW-1 QF

I have a 2,000 FT roll with no use, if someone knows what it is used for please let me know.
Don't know if it would be good for Ham Radio use, or is it more or less used for a video cable? Any help would be appreciated.

Thanks!!!
Mike WO4J

Source record: 177774

Yeah Steve, but look at all the nice memories, and knobs!

Seriously, I think that all products should be tested on the air by the V.P.'s of the companies, and let them complain to the design engineers. Unfortunately with the average selling prices going down the drain, the manufacturers have no recourse but to keep shipping stuff like this and we pay the price. I am now waiting at least a year before buying a new low band radio, to allow the MarkII's to surface.
Frank

Hi Terry. I have had my FT1000MP for just over a month. It is a great radio, but I have noticed exactly the same thing that you have. It is a little bit annoying considering that my TS850 never had ANY noises like that. I certainly am going to keep the radio though. --- Steve N9ROU

1200. Looking for a 12V & 24V DC UPS

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-15 00:00:00 UTC
From: "Gary Mitchelson"@usa.racal.com
Message-ID: <3353b273.21814587@news.racal.com>
Source record: 177776

I am looking for a source of UPS's for DC voltages, both for 12VDC and 24-28VDC.

I need it for a mobile environment where if the vehicle voltage is lost I can still run for 30-60 minutes on an autamically switch battery source (about 3Ah).

Does anyone know of a commercial source for this??

Thanks

Considering purchase of either ADI AT600 or R/S HTX-204, and am seeking opinions and personal experience with the radio(s). I see that ADI is relatively new to the ham market, and is made in Taiwan...don't want to buy junk !
How long is warranty ? All opinions welcomed...respond here or directly E-mail me...

THanks !
Rich

Although I have not used either antenna, I doubt the shunt capacity is needed to cancel the inductance of the loading coil. The antenna can be tuned for resonance w/o any shunt capacity. Howver, the feedpoint resistance would be quite low. The shunt capacity is introduced in order to form an L network to raise the feed resistance. When the shubt capacity is introduced, the antenna will most likely need to be lengthened somewhat so that the feed is now resistive +inductive- the inductance forming the series L of the L network.

1213. Re: Question on the TM-V7A

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-15 00:00:00 UTC
From: tnic <tnic@IDT.NET>
Message-ID: <5j11qp$cu@nnrp2.farm.idt.net>
Source record: 177789

The TM-V7A can do cross band repeat out of the box.
It can be activated/deactivated from the unit or remotly on a hand held
via DTMF keypad.

The TMV-7A can do two types of cross band repeat. Full cross band repeat
listens on either band and transmits on the other band. This is good for
simplex but stinks for repeater use since you have to wait for the
repeater to drop carrier before you can transmit (since your radio sis
transmitting the repeater carrier to you). Its great for simplex work.

The second type of repeat the TM-V7A can do is locked repeat. This means
the radio only listens on one band and transmits on the other. Its a one
way repeat. This makes more sense for repeaters (to me) I can usually hear
the repeater but don't have a strong enough signal to reach it. So I
listen on the repeater output and have my hand held transmit to my TM-V7A
which outputs to the repeater input. This way I dont get hosed by the
repeater carrier.

Enjoy
=TOM=

##########################
Pricey? I don't think so. Not if you want the best receiver on
the market and the finest QSK together with excellent transmit
audio.

How about the Kenwood 440? Try getting proptietary parts to
get one fixed. Ten-Tec still services the first rigs they
made.

I just upgraded my Omni V to an Omni VI Plus. What a fantastic
piece of equipment! I've owned the rice boxes too. Nary a one
could compare. Like when your rice box thinks my signals are
splattering, because your receiver overloads and your noise
floor drops. Meanwhile, I keep on working that station you
don't even hear. He's below your noise floor due to phase noise
generated in your radio.

Not that the other stuff isn't good too, and fun to operate.
I just got tired of them, and Ten-Tec really is better. See QST
for phase noise discussions around the time of the Omni V
debut.

Not bragging, just stating facts.

Accepting offers

Uniden President HR2510
Covers 26-30Mhz
Here is the condition of the radio:

HR2520 SN83004135
There is a bar code sticker on the bottom that says:
(This product is refurbished and is not covered by
the Uniden company warranty. See your dealer for
further details K87059)

The face plate is clean with very little wear
and window is clear with no scratches.
I bought it about 5 years ago.
I used it very little, never had any problems.
I also have some transistors for
power mods that I bought along with the
radio and never did. They are EC6340 and
MRF497. I have power cord, manual, mounting
bracket with the 4 big black side screws, It has
the stock microphone. I have both accessory
connectors.
Modes: AM/FM/USB/LSB/CW RF GAIN, AUTO-SQUELCH, LCD FREQUENCY DISPLAY,
NOISE BLANKER,SCAN, SPAN, BEEP, MIC GAIN, CHANNEL UP/DOWN BUTTONS ON BOTH
RADIO AND MIC, 25W

Also have used power supply and CB for sale:

GSC model 6PR 6amp regulated 12V

Cobra 148GTL
I bought this about 12 years ago.
Its a little beat up but works. (Signal strengh
meter is broke....gets stuck. Stickers on the
top cover and a few missing cover screws.
Cover Freq range of 26.785-28.085 it also has a slider.
Have power cord, mounting bracket but no screws.

1230. OMNI VI ssb performance ????

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-16 00:00:00 UTC
From: mdim@intranet.GR
Message-ID: <9704161110.AA17061@lotos>
Source record: 177620

Dear Amateurs

I am thinking of buying an OMNI VI plus after owning 4 "oriental YAECOMWOOD"
and after been a happy owner of a TITAN amp. and after reading only
good reports from other TT owners but the only thing that most of those happy
owners are reporting is the CW performance ,good selectivity/filtering
of the OMNI VI.

I will be using it only on SSB and I would like to hear from OMNI VI
users about the transmit and receive audio pro and cons on SSB Mode.

Does the new OMNI VI PLUS has any improved audio processor compared to the
previous one??

I donot want to spend money for things that I will never use like
1.a dual receiver in the same unit.
2.power(switching) supply since every ham-shack has a 12 v P.S.
3.antenna tuner (I always use an external tuner)
4.Bells and buttons that only once or twice I will press in my whole life.

==========
I would rather spend all this money on good crystal filters.
==========

My warmest thanks to all of my fellow hams who will take time to
respond and help me out with my decisions.

Thank you all

I've owned a Ten-Tec Paragon and, overall, thought it was a good rig. Maybe not a great rig -it had some rough edges- but I'll grant it was TT's first try at a "modern" HF rig. That was 1986 and this is 1997. The Paragon (and my 1985 Ford) are gone and replaced by new. QST produces FINE technical reviews of new amateur equipment, but when is TT going to start building new radios? The Paragon II was an obious last gasp (like Drake trying to market the TR7A as somehow better than the TR7!), as was their withdrawl from the real competition of retail sales (did the market even glitch?). I would consider TT in a minute if they would produce a modern, general coverage HF rig. Ten-Tec's customer service IS truly unmatched, but you can only sell so many ham-band-only rigs and $29.95 kits in today's market.

Since the world tends not to be one sided, here are some more Ten-Tec facts:

*If you own one of TT's 2m HT's and it needs a new uP chip, you'll have to trash it. I'm afraid the mask-programmed chip is no longer available.

*There is so much processor noise rattling around inside a Paragon that the clock (verified by several owners) actually gains time when the rig is switched on.

*The Paragon's S-meter is useless (constant S5 to S9 readings) in several large swaths of the HF spectrum due to IF leakage (suspected).

*The "Watts" scale on the Paragon meter seemed to be a cruel joke. The sensing circuitry looked conventional, so all I could figure was that

the engineer had the meter manufacturer silk-screen the meter face incorrectly.

I'll probably get flamed for this, however, I WOULD consider purchasing a new MODERN (general coverage) Ten-Tec HF rig.
-Ken WB0QNA

Ed,

When one has plenty of money and gripes about prices that's being cheap. When one has very little money and doesn't like nearly everything being above his means, that isn't being cheap, it's being poor. there are many people who have ham licenses, who are poorer than Arkansas hillbillies. Many of them live in third-world countries. No matter if it's a fellow American who's down on his luck or a native tribesman of the Amazon rain forrest, if he wants to participate in the hobby, and can pass the tests like the any other ham, why should he have to be barred from access to say the 2M band by the fact that all the rigs are $200 and up? Why can't there be some $50 rigs for 2M when some dumb CB'er can get a top of the line CB for that much?

I bet that NONE of those who disparage what I have to say about THAT point have ANY idea what it's like to have an annual income under $12,000 in today's economy, those snotty fat-cat beer-bloated liberal yuppy democrat turds probably never had it that tough in their life. They probably look down their noses at people that poor and call them "trailor-park trash" when in fact some people wish they COULD afford to live in a trailor park.

There was NOTHING on any element of the ham radio test requiring a minimum income level. It's supposed to be a hobby that is accessable to anyone who has the skills to get a license. it's good that some can afford to spend $20k on their ham shack, and that many rigs are so chock full of bells and whistles, but that didn't mean that there is no market for a no-frills VHF rig.

I thank God for people like Ten Tec and other companies trying to make the hobby accessable to those who don't have deep pockets. My hat's off to them. In my opinion, Ten Tec and those like them are the cream of the crop in the human race and God bless 'em!

I've had a person who told me that before I complain I should see if I can build my own IC-706 for under $3500 instead of buying one from Icom for $1200. Well who the hell said that EVERY vhf rig on the market HAD to have

ALL of those features anyway? Some of us are happy just to be able to talk,
without all the frills and bullcrap. IS THAT A CRIME?

Ted (ted@caprica.com)

Paul,

The JT1000 is one in a fine line of a Motorola Radio series known as a Jedi (yep, Star Wars). It has the same elctronics and RF section as the HT1000 and MT2000 radios. It's claim to fame is the ability to be "keyboard programmable." However, to do this you must first, using normal Moto software, "enable" the user programmability function. Then, with the addition of a programming "key" that attaches to the accessory connector, you can program various features from the keypad, including frequency.

There are a bunch of accessories available for the Jedi series radios and it has been my experience that these radios are pretty tough to hurt. The 16 channel limitation is truly the only limitation on the JT1000, and with keyboard programmability, it isn't that big of a deal.

Tom

Can someone pls (nicely:) direct me to a reference in relation to the
basics of Morse code equipment. Specifically as to the design and
construction of the old style of electr mechanical sounders.
I have an understanding of general electronics, but i do not understand the
relevance of the resistance of the sounders used in the Morse system. As i
have been asked to rewind an old sounder, i need to ensure the resistance
as well as the magnetising force (gauss?)...is there a basic formula or
software tools to assist in the winding of such coils

Any help would be greatly appreciated....

Regards,
Dale

Look, take it to some newsgroup that is appropriate for this type
of discussion. You may be a god in your own mind, but that
doesn't excuse you from acceptable newsgroup behavior. Please
follow the of the newsgroups and post on topics within
the charter of the newsgroups. This bashing of amateur radio
dealers has no business being in these newsgroups.

As for flaming your idiotic signature, you make that totally
unecessary. Better to thought a fool than post inane notes
in unrelated newsgroups and prove it (to paraphrase a saying
that more people should adhere to.)

From: bcs@starnets.ro
Message-ID: <861211974.26386@dejanews.com>
Source record: 177637

Hello everybody !

I nedd your help to set-up the internal CPU settings for YAESU FT-50.

I wish to gnow the default values for the following settings:

VHF:

HSSQ
*THSQ
*TISQ
*S1LV
*S9LV
HPO
L3
L2
L1,

and the same corresponding settings for UHF

!!! Do NOT push the KNOB while diplaying the * marked settings !!!
To enter to the CPU mode settings the action is :

1) reset the FT50 by KNOB+MON+POWER-ON
2) press LAMP+PTT+KNOB+POWER-ON
3) The display shows BAND A1(A3)
4) then rotate the KNOB WITHOUT PRESSING IT !!!!

To exit press POWER OFF again

Thnx in advance

Bogdan

1252. FT-5200 Dual In-Band Receive?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-16 00:00:00 UTC
From: Gary Winkelman <wink@felix.kodak.com>
Message-ID: <335521A8.24CE@felix.kodak.com>
Source record: 177642

Hi, Thanks for reading!
I'm considering buying a Yaesu FT-5200. Is it capable of dual in-band receive where I can have both receivers on either 2 meters or 70 cm at one time? I think it would be handy while travelling to have one receiver scanning on 2m while the other receiver is sitting on 146.52 looking for simplex calls.

With the drastic close-out prices at some dealers and the remote control head capabilities of this radio, it looks rather attractive to me!

... (stuff deleted) ...

>I'll probably get flamed for this, however, I WOULD consider purchasing
>a new MODERN (general coverage) Ten-Tec HF rig.

No flames, but by limiting the receive coverage to ham-band only,
TenTec is able to peak the receivers. It is part and parcel of what
makes their ears so superior to others on the market.

It is a trade-off, certainly. But one I (and many others) gladly
make. I don't currently own a TenTec, nor do I work for them (or
anybody at this point). But if there is a dissatisfied TenTec owner
out there, I'll gladly swap my ham-band only Yaesu FT707 with them!

As a voice rig, the FT707 is fine. The receive audio quality is
quite wonderful, in fact -- superior to that of other rigs I've
owned (Kenwood mostly). But I'm a CW op mostly, and the semi-QSK
operation isn't even close to semi-QSK, and the CW filtering isn't
narrow enough without the optional 300Hz filter.

Any voice ops out there want to trade?

I have recently released my Shareware Callbook for distribution. It
is a complete and fully functional US Callbook that runs on any PC.
(386 may take up to a minute to find a call, 486 and higher 10-15 seconds.)

The callbook is updated up thru February 24, 1997 and includes many
of the recently released vanity calls. The callbook includes calls, names,
and addresses only. It is 24 megabytes to download and takes up 61 megabytes
on your hard disk.

Visit my website for more information: http://www.qsl.net/n7ln/callbook.html
or ftp it directly from ftp.qsl.net in the /pub/n7ln directory. Registration
is only $10. Read the file CALLBOOK.TXT first.

Come check it out!

1258. FS: King VHF HTs - loaded

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-16 00:00:00 UTC
From: Rob Bailey <wm8s@pobox.com>
Message-ID: <01bc4aad$11e5c600$247e65ce@wm8s-1>
Source record: 177648
Cross-posted to: alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.commercial-lmr,rec.radio.scanner

Two (2) King EPH-4152A VHF high-band, synthesized hand units, *loaded*. One is in pretty good condition (hairline crack in case where cover screw tightens) and currently operates from 144 through 174 MHz; one is in fair condition (small chip around volume control, which has been replaced by factory authorized technician) and currently operates from 148 through 174 MHz. Both radios are field or computer programmable (see below), and both are complete and functional with the following options (all factory installed) and accessories:

- 210-channel modification arranged as 15 banks of 14 channels (both)
- UCOM programmable tone paging board (which takes over bank 15) with DTMF ANI (both)
- programmable frequency-inversion voice-scrambling security board (export restricted) (both)
- DTMF (Touch Tone^SM^) pad for phone patch or system control
- brand new antenna (each)
- brand new battery (each)
- very good condition 120VAC, rapid desk-top charger (each)
- good condition leather case with belt swivel (each)
- user and field programming manuals (one set)

Features include:

- Solid, commercial radios with plenty of RF and audio.
- Radio will scan all enabled channels in one bank, or all enabled channels in all 14 banks.
- Seven-character, back-lit alphanumeric display with normal or blinking characters; shows group or channel name.
- Several programmable Priority channel modes.
- Programmable multi-function switch will act as: high-low power switch, paging decoder enable/disable or scrambler enable/disable.
- Programmable battery-saver modes.
- Programmable security code to access field programming.
- Programmable busy channel lockout features.
- Optional speaker-microphone is available.

Buy both radios and the package includes the factory computer programming cable (requires PC with RS-232 serial port) and all required programming and service software (requires IBM compatible PC)!

Asking $1500 for the entire package. *May* consider separating radios later. Will *NOT* consider separating programming gear, so please don't ask.

You don't know me, and I don't know you, so I can supply *plenty* of references. The scrambler and the progamming software and cable are both sales-restricted items. Therefore, the only way I can sell this package is with a reference (a quick phone call to your chief, etc.) and after receipt of a check or money order.

Message-ID: <33554DDA.45017372@midway.uchicago.edu>
Source record: 177649

I've got an HTX 101 (I think that's the 10 meter ssb/cw model number!) and I can't get it to transmit. The TX light turns on but it just doesn't do anything. It's not like something has blown, it just sits there and keeps recieving. I'm wondering if it may have reverted to its shipping state which disables transmit, so if anyone has a manual for it, could you email me?

> I feel that is the sole reason for the success of Yaesu, Kenwood, Icom.

Wellllll, I have to agree with the comments that say 1 zillion memories
is more important than a good quiet receiver. You talk to the factory
Reps at Dayton, for example, and most start out by telling you that
THERE ARE 178364803 MEMORIES AND 3746 VFOS AND 36498566 KNOBS! Once you
wade through all this bravo sierra you might find out about dynamic
range, noise floor, etc.....

Used ta be "If you can't hear 'em, you can't work 'em". Sorta still is
but that gets overlooked by the bells and whistles. Some of the world's
finest receivers have very few knobs, like Rhode $ Schwartz.....

A number of years ago, Bill, AC8B and I were in Atlanta. Went to the
company Radio Club and played with the TR-7 for a while. Then we went
to HRO, about 10 minutes away. We listened to 10 mtrs on an Omni-V.
Thought the radio was broke, the receiver was so quiet. Didn't hear any
signals either. Tried a KW, Icom, and Yaesu that were connected to the
antenna switch. No signals there either, but was there a lot of noise
coming out of the speaker..... Rather have a quiet rx so I can hear the
weak ones.....

There. Thats my $0.02 about that!

I can't be sure without checking the Belden catalog, but this sounds
like RG-62. RG-62 is 92 Ohm, low capacitance cable.

I'm looking to buy the following ARRL Amateur Radio Video Exam Course:

Technician
General
&
Advanced

If you have the above items (complete with documentation) and are
interesting in selling them..contact me.

IF ALL THE SMALL DEALERS KEEP GOING OUT OF > BUSINESS THE THERE WILL ONLY BE A COUPLE OF GIANT DEALERS WHO CAN FIX > THE PRICES. WE HAMS WILL BE POWERLESS AND WILL BE FORCED TO PAY."

As a general rule, I find that the big guys have the lower prices due to
their larger quantity purchases. Several years ago I tried to get the
local (small) store to match the AES price on a new rig and was told
that they paid more than AES was selling it to me for!

1273. MASTR II frequency changes?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-16 00:00:00 UTC
From: Samuel Johnson <samjohnson@Bledsoe.net>
Message-ID: <335553D5.1339@Bledsoe.net>
Source record: 177663

I am setting up MASTR II's for repeater use. The only problem I have, is that the manual says to read the frequency with a frequency counter at a certain point in the radio. My point is, it has to be 9 times the frequency. In the 440 range, this puts the frequency far above the frequency counters that I have access to. Am I looking at the problem wrong? Can anyone help me decide on how to solve this situation? I have the GE test set, MASTR II manuals to work with, plus the mods.
Any help appreciated,
Sam Johnson KF4GQS

I went to my local ham radio store and bought a Larsen relocation kit,
cost $5 or less, and remounted my KG 2/70. If I change cars and keep
using the KG 2/70 it will come off and not destroy anything. (Like
itself.....)

If you don't want to spend $5 see what a cell phone shop will charge
you.....

73,
Bob

> Thanks!!!
> Mike WO4J

Belden 9862 is 93 ohm coax with a number 22 copper covered steel center conductor.

Here are the specs

velocity of propogation 84%
nom inp. 93 ohms
capacitance 13.5pf/foot
semi-solid polyethylene center insulation
black non-contaninating PVC jacket
shield bare copper 95% shield coverage

attenuation

mhz db/100ft
10 .85
50 1.9
100 2.7
200 3.8
400 5.3

Hope this helps.

> > somewhere?

> Yup. There seems to be a different standard for those available in the
> US.

The connector available in US is the 8 pin DIN 45326. Kenwood and now
obviously Yaesu are using the "Japanese" standard 8 pin which AFAIK is
not specified by DIN at all. Don't know the history behind it...

This weird connector is available in Sweden for the equivalent of 60
cents.
7 pole not available here but the middle pin can be removed with ease.

Terence,

I have noticed the little "clicks" that you have referred to but, as you,
find them to be of no consequence or concern. That aside, I'm elated with
the radio. The filtering, flexibility and performance have proven to be
better than I could have imagined. I have experimented with most of the
menu items and found it easy to customize the radio to fit MY operational
requirements. I'm sure you will have years of fun ahead with the radio...as
will I.

Neither AES or HRO's prices are anything to write home about so I wouldn't brag about calling HRO last. You should try some of the smaller dealers who blow both of them away. Both AES and HRO are supposed to be so big and buy in such good quanities so there prices are more conpetitive than everyone else, what a joke. Call Lentini's and ask them for there cash price and card price and in most cases they will be cheaper than both these big so called buy in large quantities and sell for less dealers. Lentini's is not the only one either. You should do your homework before you brag about these so called good prices at HRO. 73, Stevedconti@carroll.com (Daniel M. Conti) wrote:

Good assessment on mobile antennas. You almost never get something for
nothing. If you want low wind resistance and less obtrusive you have to
give up pereformance on the lower bands - a good tradeoff for me.

bands. $175
MFJ-945D 300w HF antenna tuner. $85

All items you ship, your method.

Needs/wants/desires (other than cash):

Vibroplex Brass Racer Keyer
Wilderness Radio Sierra (with KC-2 and 40-10 band modules)
Index Labs QRP++
TenTec HF equipment (Omni C, Argo, Scout, etc.)
Compact HF rig (TS-50, DX-70, IC706 size and feature range).

Trades -- we ship our own.

No cash to give on wanted equipment -- trades only. Sorry. When I
get a job, we'll talk about cash. Package trades preferred.

The Telex headset is spoken for (previous post).

Ted,

I'd be VERY surprised if Mr. Ferrero at HRO does not sue your BALLS off.....

What possessed you to begin this ridiculous diatribe against HRO anyway?

When will those here realize that the free and open marketplace works fine here, and in the ham community, without the continued blabbering of the self-appointed "price police", and those who feel that is their self-appointed duty to protect the rest of us "vulnerable hams" from the eveil merchants out there looking to rob us of every last dollar.

If HRO was doing something wrong, misleading their customers, or overpriced, they would NOT be in business very long, especially in the cut throat amateur equipment environment. Just the opposite, HRO has in excess of 6 or 8 stores and counting.

You bore us all to death trying to explain your way out of a huge faux pas, and then initiate a tirade against Standard Radio.

Maybe HRO and STANDARD will BOTH sue you.

Don't be mislead by a false sense of anonymity here either.

Rest assured that ANY law firm would have the resources to track you down in a New York second.

I've dealt with HRO many times, and find them to be an EXCELLENT company to deal with, whether I'm buying a $600 radio, or a $15 antenna part. My orders are treated with equal concern.

As well, Standard makes a FINE product, always on the cutting edge of new design and features.

Hats off to both.

>Please note that in spite of the embarrassment that comes with doing so,
>I have publicly posted this reply to HRO in the above newsgroups to help
>rectify the confusion of this situation.

As soon as T-T Comes out with a 2 meter all-mode They can have my business
and i can forget about having to put up with the crummy kenwood TS-700s
(in the shop 2 weeks - 2 months in the shack) and Yaesu ft-225RD being
smashed
by none other than U.P.S (Universal. Package. Smashers)

You really screwed up a nice Yaseu FT-225RD

Have a good one all.

All are slightly used but work very well. Tested in the open
over 3 miles range. Very useful for any communications.

I don't have the battery chargers but they are probably available
somewhere on the internet.

Asking $75.00 each.

If interested please e'mail me at:

beaudrlt@polarnet.com

Thanks,
Charles

1299. FS: Kenwood TS-120S

Very clean Kenwood TS-120S. Looks brand new!
Comes with Desk mic, hand mic, DC power cord, original manuals
and schematics.

This is a very good operating radio. Probably works better
than some newer radios.

Asking $400.00 I pay shipping.
If interested please e'mail me at:

beaudrlt@polarnet.com

Thanks,
Charles B.

1300. Yaesu FT-101 - Help with Tuning the Rig

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-17 00:00:00 UTC
From: Ben Flauder <bflauder@sap.ca>
Message-ID: <33563281.4316@sap.ca>
Source record: 177516

I just bought a used FT-101. There was no manaual with it and the previous owner did not know how to work it. This being my first tube finals rig, I'm not sure how to tune the rig properly.

If anyone is familiar with this rig.....could you please drop me a note with some instructions.

Thnx, Ben VA3BSF

1301. Ten Tec 6m xverter vs. Yaesu FT920, IC756, TS-570S

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-17 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <5j5eah$efm@dailyplanet.wam.umd.edu>
Source record: 177517

Want to save bigger $$$ in getting to play with 6m?

Ten-Tec (of whom I'm merely a satisfied customer) sells a 20-to-6 meter trans-
verter that's good from 50-52 MHz and puts out a solid 8 watts. When there's
a decent opening, this is enough, or certainly can be used to drive
an amp should you decide to invest in one.

It sells for $95 as a kit ($159 built) and will work with ANY rig that will
put out under 10 watts on 20m. Best $100 I EVER spent.

>> Hello Folks:
>> Anyone check out the new Yaesu FT-920. Continuously adjustable HI/LO/Band

Ron,

I built one last year to take with me on business trips. It works very well and receives AM stations especially well. On SSB or CW, the regen detector is rather squirrelly and can be pulled off frequency easily by strong stations (or weak ones, for that matter), making copy difficult. It takes a rather strong SSB station to make for comfortable copy.

I had some local AM broadcast overload which I corrected with a series trap at the antenna input.

The audio quality is awesome. It sounds like TV audio quality when conditions are right.

Have fun!

R,

Al

I have noticed those clicks as well but they are perfectly
understandable. The clicks I am referring to are there when the tuner is
switched off and they appear much too frequently to be related to the
tuner as it only has 39 presets. My clicks occur every 81.92kHz right
through the general coverage range as well as Ham bands.

Tom, typically some Motorola commercial rigs setup for use on amateur
bands
have the shortcomming of being capable of only xmit/rec in "half" of the
band, (ie 444-470, or 146-174), and with RSS you cannot move the range
without losing part of the available band. Can you comment on the
JT1000,
is it range programmable for VHF for 144-148 inclusive, and 430-450 for
the UHF model (I think there's one, but not sure).
Vic

Source record: 177527

I have been observing the quality inputs from the IC-756 reflector.
Either likes or dislikes, I would like to thank all of you very much.
Also, the side-by-side performance comparisons between the IC-756 Vs.
IC-765 from W2VJN has been a very valuable piece of information as well.

Do you all DXers think this rig matches up to any of the competition class
rigs (e.g. TS-850, TS-870, TS-570, FT-900, FT-990, or FT-1000MP) that fall
into the similar price range (+/- $700)? Or is it a class of its own?

I am very curious about this finding, if there is any.

Thanks in advance! 73!

1317. TED the big mouth ... HRO ... Lessons

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-17 00:00:00 UTC
From: Larry Robison <Deleted@SpamCentral>
Message-ID: <01bc4b04$2c7133e0$17080dd0@larry.netohio.net>
Source record: 177533

Sometimes it's interesting how lessons are learned! I wish to apologize to anyone (except ted@caprica.com) I may have offended by my recent posts. Somewhere the reason I made them got lost in the rhetoric and sarcasm.

Original point:

I have observed that when someone replies to a message they may be inadvertently carrying the wrong message. Example "all niggers should die" was the subject of a post by in misguided individual. All of the replies to that message, telling the person what an idiot he was, carried the subject and thus created a flood of messages that all said "re: all niggers should die" What a fiasco!

This HRO thing was pretty much the same. A negative message carried forth inadvertently. There were some complaints about HRO but many replies were of the positive nature and they too carried the subject "HRO catalog of lies"

What should also be learned is that I saw replies to my post that that actually were critical of me because ted@caprica.com had the FACTS and was trying to do good! How easily did they follow the loud mouth piper over the cliff. Ted presents very well but in the end, is trying to get his foot out of his mouth because he did not have the FACTS and probably realizes that he could easily be sued! Ted's statements, in the end, proved to be libelous and although HRO probably will not sue him, Ted did HRO a real bad injustice!

Teds own statement:

> Let me say it plainly and clearly:

> I was WRONG and I retract what I said about HRO's pricing on Standard's
> radios and I sincerely apologize to and ask the forgiveness of HRO and
> all of you who read these newsgroups for posting the same misinformation

> that was given to me, which I did not know was incorrect at the time. I
> hope that this apology, explanation and retraction is satisfactory
> because it's the best I can do and it has caused me undue embarrassment,

> which I can assure you is NOT something that I take lightly! To be
blunt,
> I am extremely pissed at Standard for this. I feel that Standard owes us

> all an apology!

Now it's Standards fault !!!!

Ted doesn't know all. He twists things up. Like this:

> Shows how poorly you set up your system then. it was adressed to
> postmaster@netohio.net and if your system was up to par you'd have
gotten
> it. I found it laughable that you complained to my admin about my demand

> that you not email me, because I have and reserve every right to refuse
> email from ANYONE at my discretion, except from my Admin... after all...

> it's his system.

He claims that my system is poorly set up. Without thinking you might say aha "NetOhio" is poorly set up. FACT: I chose not to set up postmaster@netohio.net. Many systems do and many do not. It is not a standard by which one judges how well a system is set up. The reason is it keeps junkmail down eh Ted!

Also he claims that I complained to his admin about his stupid email message. I did send a message to his admin, but the subject was not a complaint about his email. His email was included because the header information clearly identifies the source. Beside it is funny and I thought his admin probably needed a good laugh. As an ISP I am concerned that if Ted Hershman is sued over the HRO thing, his ISP could also be held liable, a dangerous precedent. I think anyone that serves up his garbage is opening themselves up to that.

I have learned one very important thing. There are Ted Hershmans everywhere. They are pitiful. I can do nothing to rid the planet of them or keep them from doing what they do. I can ignore them! Thanks Ted.

Eric Bouchard, VA2PTC

Look to the manual page 45

You can record 20 sec of message with de FTT-12 keypad, but you cant split
the DVRS in tow zone REC1 and REC2.
You can chose the max time for rec2 between 1 and 10 sec with the RTIM-28
menu. the remaining time is allocated to Rec1

ex: if you want 6 sec for REC2, REC1 will be 20 - 6 = 14 sec

I've had relatively good experiences with the HRO Sunnyvale and
Oakland stores. At times, especially when they're crowded, I've had
trouble getting someone to help me, but otherwise no problems.

The thing that really DOES annoy me, though, is the way the manager of
the Sunnyvale store constantly berates his employees in front of
customers. I find it embarassing to be in the store when he does it,
and I'm sure the employees don't feel very good about it either.

Hey Bud,
Before you shoot down someone else's equipment just to sell your
own,
keep in mind that besides being a really self-serving and inconsiderate
person, that you're misconstruing what was written in the original
message you shot down. What was written is that the 95LX is good for
portable packet (and I have proven this to myself over the last two
years with a Tiny-2 TNC and my HT), like what was shown on the cover of
the issue of QST in question. It doesn't say "the same unit featured in
the article". Look before you leap - the precipice may be greater than
you think.

If your unit is the one exact same identical 200LX featured in the article, why are you selling it? According to the article, you sound very happy to take it anywhere. I guess not, huh? why do you self-cenetered folks have to take your frustration out on others? I couldn't stop you from selling your 200LX if I wanted to. You forget that there are more than enough people interested in your palmtop to where I am not threatening your all-important sale. I was going to list my HP Omnibook 100 (hi-res LCD VGA display, built-in mouse, PCMCIA, infrared, HDD, etc., etc., with AC adapter and serial cable for $250, but I haven't had the time to do so yet. How does your fancy 200LX stack up against that, bud? This is a notebook, but in addition to running Windows, it sure can run packet "at least as good" as your "celebrity" 200LX.

Get a life. I'm selling my 95LX palmtop for portable packet. That's it. It WILL do packet with a TNC, no matter what drivel you wish to share. I'm just sorry that you probably assumed I was trying to head your sale off at the pass.

Now that's what I like, a Ham who likes to fish. I have used frozen
corn and it worked great in Shasta Lake. I caught about 7 in 30 minutes
or so. Just a couple kernels on a #10 hook and a small splitshot. I
have seen carp eat duck food (corn/grain mix) at the docks where I work.
Good luck. Troy

1326. FS JPS NIR-10 DSP

Message-ID: <3356D27F.630C@bellsouth.net>
Source record: 177542

Hi, All --

I have a JPS NIR-10 digital Signal Processor with 4.0 firmware in extremely fine condition, in the box, for $150 +shipping. This unit sells in AES catalog for $249.95 and in Davis RF catalog for $259.95. If you've never experienced what DSP can do for SSB or CW reception, you're in for the surprise of your life!! I am so impressed with JPS performance and quality that I stepped up to the NIR-12. Which means that now someone out there can get a nearly-new NIR-10 for $100 off.

I AGREE! THE SMALLER STORES STORES NEED THE MONEY MORE TO KEEP AFLOAT!
HOW CAN THE LITTLE GUY GIVE YOU A BETTER PRICE IF HE DOESN'T HAVE THE
BUYING POWER OF 20 STORES??
IF YOU GET THE BEST PRICE/SERVICE FROM THE SMALL GUY THEN DON'T GO
TO THE LARGE CHAIN AND HAVE THEM MATCH IT. GIVE YOUR BUSINESS TO THE
SMALL DEALER WHO WAS HAPPY TO SELL YOU THE RADIO FOR THE LOWEST PRICE TO
BEGIN WITH. MANY HAM STORES ARE GOING OUT OF BUSINESS. IF IT KEEPS UP
THEN THERE WILL BE ONE OR TWO LEFT WHO WILL CHARGE WHAT EVER THEY WANT!
LETS KEEP THE MARKET COMPETITIVE!!

From: jlmott@aol.com
Message-ID: <19970417211401.RAA28445@ladder01.news.aol.com>
Source record: 177547

I have been looking at the FT-50 for a while, and I'm going to buy me one (if not at the hamvention, then new). I have been looking at many pictures in catalogs, and it looks as if the antenna is WAY BIG. It looks twice the size of the radio! Is it true or just an optical illusion? Are there any smaller ones with the funny connector the radio has?

Please mail me directly

I don't normally comment on prices I see posted, but when they are so
far out of line that they literally stink, well......

The radios normally sell for less than half that! (used)

>You don't know me, and I don't know you, so I can supply *plenty* of
>references. The scrambler and the progamming software and cable are both
>sales-restricted items. Therefore, the only way I can sell this package is

>of a check or money order.

Sales Restricted? Bull.

Of course, anyone can buy a scrambler, and the software can be gotten
of BK's BBS!

What a crock.

1333. FS: Complete Ham Radio Station/Kenwood TS 680

Cross-posted to: rec.ham-radio,rec.radio.amateur.equipment,ne.forsale,rec.ham-radio.swap

Entire H.F. Station for sale:

Kenwood TS 680S HF with 6 meters.
-100 watts on all bands, 20 watts on 6 meters, all mode.
- Narrow CW filter
- SP 430 matching external speaker
- AEA model ET-1 HF antenna tuner
- 20 Amp power supply
- Orig. box, manual, and service manual.
$900.00 including shipping continental U.S.

Misc. Ham equipment:

AEA PK-88 packet controller.
- includes MFJ TNC/MIC switch for Kenwood/Alinco radios.
- Orig. box and manual
- Serial Cable/Audio Cable/Microphone Cable.
$75.00 including shipping continental U.S.

MFJ Model 1796 Vertical Antenna:
- Covers 2, 6, 10, 15, 20, and 40 meters.
- Pick up or delivery near Hartford, CT
$100.00

Will split up station if necessary. Please e-mail me if interested.

The only reason for selling is that I am attending grad school and
working full time and will not be using the gear for a number of years.

> friend Paul, N0ZJI, at paulhe@juno.com.

Larry and Paul:

Contact Carl, km1h@juno.com about this. He trades as RADIOKIT and
says that he has 6M conversions for the Heathkit SB200, 220, 230 and
1000 series, the FL2100, NCL2000, AL80A, L75, L4B, LK450, Bandit
2000A, and others. 603-635-2235 9-9 Eastern Time.

I've no experience of these, I've only read his announcements. I
believe that the conversions result in a single band 6m amp.

cc'd to email.

Amazing that all these Kenwood owners are making comparrisons of the
FT920 to the TS570D/S and they haven't even been released yet,
amazing. I guess they have traveled to Japan and made a side by side
comparrison. I have Kenwood, Yaesu, Icom, and Alinco and even own some
Ten Tec but I will have to admit I have never been able to make a fair
comparrison until it is on my table so a fair side by side can be
made. You guys who make these opinions up without ever trying the rig
are like the critics we have to endure for movies. If they usually
hate the movie you can bet it's a good one but if they like it don't
waste your money. Thank goodness most of us have enough brains to make
our own decisions instead of the letting the critics make them for us.

For Sale:

AR-8000 Computer Controlled Receiver
.1-1900 MHz Complete Coverage, No Gaps.
All Original Packaging, Ni-Cads (Never Used), Antenna.
Scout Mod (3 wire-serial port)
(Pseudo?)Discriminator Mod
Clean, Non-smoker.
No case scratches
Extra LCD Cover (Just in case)
Extra plastic Shell (I bought an extra because I thought I might need it.)
SC-8000 Soft Case definatly warn, but still good.
Extra FFC Cable, Good for optolinx.

I've had the 8000 for almost a year, It's worked quite well, but I've talked to alot of people, and I've come to the conclusion that that the Icom R-10 would better suite my needs.

I'm asking $550 plus shipping by UPS or FedEx COD.

I'll entertain reasonable offers.

Thanks for your time.

73's de Mike

P.S. Some other stuff I've got for sale...

ASUS Pentium Motherboard w/ 256K Cache (75-200MHz) $90
Intel Pentium 100MHz CPU $140
Intel Pentium 150MHz CPU $230
2 16MB 72Pin EDO DRAM Simms $160

Optoelectronics DC-440 Tone Decoder with Nicads $200
Realistic DX-440 Shortwave Receiver $150

If you're wondering why I'm selling all this stuff, I'm tring to raise anough money for a new radio at Dayton!

Reasonable offers will be considered.

1342. HELP ON MOTOROLA MICOR RPTRS PSE!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-17 00:00:00 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <3356CB3B.1FC9@erols.com>
Source record: 177558

We presently are using 2 motorola micors for our local club repeaters. Recently after installation, the repeaters began ping-ponging for hours on end. The odd part of this was that it only occurs on rainy days.

On one of the rainy days the antenna was removed and the ping-ponging stopped indicating that it was an incoming signal although non could actually be heard coming in on the receiver when the antenna was connected. First the occurence happened on one of the repeaters. And now the second one is beginning to experience the same problem, again only during rainy days.

Wondering if any one has experienced an identical problem with their micor repeaters? Any help, at all, would be appreciated. 73 Murray. My email is mgreen@erols.com

Hello,

I am interested in getting either the AEA or MFJ Loop type HF antenna.

How well do they work? Any users have comments?

Thanks!

Jack

This feature is not in the manual but someone posted it to a newsgroup
recently. On the mainband, pressing F/W briefly and then VFO will
toggle between the AM and FM modes.

1358. Help! Need DC Power Connectors...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-17 00:00:00 UTC
From: ki0dz@juno.COM
Message-ID: <19970416.204345.2647.2.ki0dz@juno.com>
Source record: 177691

I have a problem that I hope someone in this group can help with.
Here's the situation: I have an Alinco DR-610 dual band mobile rig
installed in my Ford Explorer. My HF rig is a Yaesu FT-757 which I run
from my house. It can also be used as a mobile rig. I am scheduled to
help with an ARES exercise in June (but the comms test is next week)
where BOTH my VHF/UHF and HF rigs will be needed. I got the bright idea
of re-doing the wire harness from the battery and splitting it into two
paths so I could run the HF and FM rigs at the same time. Also, I need
to make another power cord for the HF rig.
I've gotten most of the hardware/wire for this project, but am having
a very difficult time locating the DC power connectors for the HF power
cord and the new wire harness that connects to the car battery that I've
started to assemble. The connectors that I'm looking for are the same
that are used on Alinco, Kenwood, and Radio Shack mobile rigs. I've been
to both Radio Shack and Gateway Electronics twice with no luck. I've
called Alinco and also been to a local car radio installer in addition to
SoundTrack. I'm beginning to wonder if these rather common connectors
can be found as just connectors without being attached to some kind of
wire assembly.
Can anyone help me find the two "male" and one "female" connectors
that I need? Thanks for any info anyone has.

1368. HT failure question

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-17 00:00:00 UTC
From: dirwin@imap2.asu.edu
Message-ID: <Pine.SOL.3.91.970416234337.20216B-100000@general1.asu.edu>
Source record: 177701

I finally got my NC-Tech license, (now I can stop loaning out my HT to my buddy who has had his license for a while now), and wouldn't you know it, a glitch with my HT after a week of use.

I would appreciate greatly any advice, thoughts on possible causes, etc., you with more experience might be able to offer. (I will make one exception, that being suggestions to dump my Radio Shack HT. I got it used within my budget (a full-time student with a family takes what the budget will allow).

My problem follows:

Said HT transmitted for about a week (actually for a while now, but a week of my possesion). Now, it receives well, but won't transmit. The bar graph at the bottom of the screen shows full power upon operation of the transmit key, but I can't key up the repeaters. As a matter of fact, it won't even break the squelch of another xcvr in the same room.

I have checked the obvious things. PL tones, offset, battery power, connector to the DC power supply, disconnecting the antenna and reconnecting it.... anything else.

I had been using it on the way back and forth to/from school, with it hooked up to the cigarette lighter, via the handy cable. The fuse blew three days ago (in the power supply cable), and I didn't use the radio for another day, so that may or may not have had an influence.

Well let me know what you think please. I'd hate to take it to Rat Shack for something I could troubleshoot, but I'm running out of bright ideas.

If anybody in the Phoenix Metro has some suggestions on where else to take it locally, other than RS, I'd appreciate that input as well.

Thanks,
Dave (KC7VTP)

Source record: 177706
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Dont be fooled by this... I wrote the Mar QST article and used
a 200LX. the differences are plenty. The 95 has only a 40column
width screen which will cause some problems running some of the
software I mentioned as well as not being entirely graphically
compateable. Even the 100LX is not fully CGA.

If you want to do what I did AT LEAST get the 100lx but it has
some bugs that youll not like. Go for the 200LX while you
can (this guy probably is if hes smart but dont let him tell you
it was featured in my article because I dont want email from someone
asking why his 95lx wont do it right).

A good used 200lx will run $350- $00 depending on condition.
My dad is selling his with 1200Bd modem and 5MB FLASHcard
for $500. I will include the BP-TNC and install the
software for $50.

I dont care if you dont buy my Dads HP but dont get a 95lx for
packet. I expect I will be flamed tommorrow but a few flames
are better than explaining to people why they cant do it after
they bought it.

We're glad you're there for a friend, but bait recipes for trash fish
don't belong on a newsgroup for scanner radio issues.

1377. Re: Yaesu FT920 - Glad I didnt' buy that IC756

Mike,

I agree with your comparison of the FT-920 to the IC-756, but
I don't quite understand your reasons for wanting to switch
from Kenwood to Yaesu. I've owned a TS-570D for four months
now, and I checked out the specs on the FT-920 on Yaesu Japan's
web site. The FT-920 is virtually identical to the TS-570S --
but its receiver sensitivity specs aren't as good as the
Kenwood's!

I'll tell you what -- if you like 6 meters, take a hard look
at the TS-570S before you buy that FT-920. You may be really
surprised. (Look at the QST and CQ reviews too.)

If you're like many people and want 6 meters just because it's
another band on your rig, think about that too. In some parts
of the country, 6 is absolutely dead. You could forego the 6
meter capability, buy a TS-570D and save yourself about $400.
That's ***$700*** less than that IC-756.

Just some food for thought from someone who purchased a '570D,
is very happy with it, and is flattered that Yaesu likes it
so much that they want to copy it -- but not as well.

73,

Meade KA4RQB

Nice, well written review, Craig. I enjoyed your style. I'd like to
see a review of the new Yeasu FT-8000R written like that.

But, if you've only had the radio for a week or so, why not just return
it to the Shack for a refund rather than re-selling it? Then go and buy
the ADI and have a nice party with the leftover $100! :)

All of the late model 241's have been made in China. Yours, depending on the serial number, may or may not go above 152. The range from 512xxx to 6xxxxx will not go out of band other than Mars. Above or below that number will go higher.

> the TS850SAT it replaced__GREAT little rig! Curt/Ka3ivb

I think I might have been one of those who started this conversation.

My TS-570D is still at Kenwood in California and last word I got from them was that they were consulting with their engineers in Japan reference some problem with the lithium battery draining, and thus losing all memory. They are not sure if that problem is affecting the spontaneous power on as well as the memory loss. It may have something to do with their switching power supply as opposed to more standard non-switching types. They also advised me that they were running into my problems on other radios now.

In any event, Kenwood seems to be trying to clear up the problem, and so long as they keep me posted on their progress, (which takes some prompting every now and then), I am willing to wait a bit more for a definitive cure.

While it was working properly, and assuming that they do come up with a credible fix, the radio is one fine machine to operate. I run it through a Cushcraft A3 with a 40 meter kit at 65' elevation and that sucker can even tune that antenna to 160 meters !!! The inverted V G5RV antenna tunes well, too. The menu system is extensive, but still pretty easy to manipulate. The FREE computer control software is pretty good, say an 8 on a 10 point scale. And it sports two antenna connectors that you can switch antennas with from the radio, no need for an external antenna switch. I got consistent good RST reports on the Maritime Mobile Service Net and the 3905 Century Club Net.

So given that they will solve the memory/power problem, I think that this will become a great radio. Unfortunately, they stubbed their toes on release of the rig and it may take some doing to overcome that.

My recommendations stand until the problems are resolved. Make sure you buy one from a reputable dealer who will have no problem working with you and/or Kenwood if you get a kludge.

I have an Alinco 580 dual band hand held for sale:

The unit comes with the standard battery, battery charger, soft carrying case (not Alinco), manual, audio tape, original box, antenna and the filtered cigar lighter cord. Besides the regular ham bands this radio has been modified and works on MARS and will receive aircraft (110- 142.995). It also covers 130 - 173.995 part of which is the marine band and police.

UHF 440.000 - 449.995
420.000 - 479.995

This radio is in good condition.

I am asking $250.00 plus shipping.

Best 10 meter I know of is the RCI2950 or RCI2970... I'm not sure if it has
the features you want, but it'd be my choice for 10/11 meters. It scans
too...

1393. HRO President calls to apologize

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-18 00:00:00 UTC
From: "John T. Young" <jtyoung@u.washington.edu>
Message-ID: <Pine.A41.3.95b.970418144526.110386B-100000@homer32.u.washington.edu>
Source record: 177478

Last week I posted a note to this newsgroup expressing my dismay over a really bungled sale by HRO on a TL 922 amplifier. Well lo and behold, today Bob, W6RJ, President of HRO called me on the phone to apologize for his company's handling of the sale, particularly with regard to the shipping/box situation. We had a pleasant chat for over a half an hour regarding my experiences with his company. I offered my criticisms of the handling of the sale and offered some suggestions as to how to handle shipping heavy items such as amplifiers in the future (since my profession deals with shipping very heavy objects on a regular basis). Bob agreed with my advice and mentioned that he was going to implement new shipping policies immediately. I was impressed with his attitude and approach. Clearly he was looking out for his business. But it takes a big man with big shoulders to spend the time to call individual customers on the phone to try to figure out what went wrong, to apologize, and to try and make it right. Who knows...maybe the company will pay attention to us little guys and strive to improve its service? I got the impression that this is what Bob was trying to do. Who knows...maybe next time I'll give HRO another chance....73, de John, K7JY, Seattle.

1394. Need parts for IC229H

Newsgroup: rec.radio.amateur.equipment

Source record: 177479
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment

A friend has an Icom IC229H which unfortunately has a burnt transmitter diode thanks to the guys at the local Red Cross who hooked it up wrong. We've taken it to at least 3 "technicians" who all say the same thing: sure, I can fix it. However all of them end up taking so long we ask for the equipment and go to another place.

Finally a few days ago I figured it'd be more efficient to get the darn diode and change it ourselves, even if we have to pay international shipping it's a whole lot better than having the radio off the air for another 3 months while we wait for some electronics tinkerer to get around to finding a diode that works.

Now the question: does anybody know where I can purchase the transmitter diode?

1403. HT SPEAKER MIC QUESTION

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-18 00:00:00 UTC
From: walter.cang@livewire.com.ph
Message-ID: <970418211045645@livewire.com.ph>
Source record: 177488

Sorry for the long wait. Your followup question to me got stuck in the
bbs. Anyway I have checked my old files and came up with this simple
diagram which I hope you can understand:

HT hookup....
The audio is no problem, hooked up through the larger jack.
For the mike/ptt you have use the smaller jack, with a resistor/capacitor
network.
Typically, the audio input (mike) is connected through a .1 uf capacitor,
the ptt through a 30 K resistor. These are tied together and go the tip of the
smaller jack. The sleeve is ground, of course.

----------mic----cap----------to center conductor

----------ptt---------resistor------ to center conductor

----------ground line--------------- to ground

or in case a capacitor is not needed:

----------mic line------------------ to center conductor

----------ptt---------resistor------ to center conductor

----------ground line--------------- to ground

hope this may give u an idea on how it works. good luck n let me know
it goes>de waly

DB>I have a Motorola speaker mic and I am trying to wire it for my FT51r. I

1404. Re: Radio Shack HTX-204

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-18 00:00:00 UTC
From: Mike Lazaroff <msl@nauticom.net>
Message-ID: <3357069d.0@pgh.nauticom.net>
Source record: 177489

Most everybody on this newsgroup likes to complain about RadioShack. Sure, they ain't perfect but then *nobody* (with the possible exception of Ten-Tec?:) is! Face it, guys, RS is a general consumer electronics retailer - don't expect 'em to be experts about any one category. I've found that the RS stores run by hams (yes, there are some!) generally are pretty competent, know what's going on, and do a respectable job of helping the customers. Sure, I agree that RS should have the accessories available with the radio now instead of later - and I've written to their corporate HQ and told them so - but I don't know what their suppliers' situations are and also, remember that ham sales are a very small percentage of their overall business.

It's a no-win situation for RS no matter what they do - hams complain that they don't have whatever (insert your favorite item - HF, dual-band HTs, 6M, 220, etc) but then when they do get a reasonably good product all the hams do is complain some more. Glad I don't have to make my living selling to fellow hams!

Some RS stores have good managers who properly train their people and do pretty well at keeping most of their customers happy. The real problem is that RS doesn't pay its people anywhere near the level required to attract and *retain* good folks who are both knowledgeable and who give a damn. When Tandy finally wakes up and figures that out they may end up with an incredible operation...but I don't expect to see it in my lifetime :).

I'm not trying to defend RS (although I do shop there occasionally). I'm just looking at things from the viewpoint of someone who has been in the retail electronics business and knows a little of what happens "behind the scenes"...

Discussing the HTX-204 is a moot point anyway since RS sent their stores a memo today ordering a recall of all units "due to regulatory issues" (quoted from the memo). Guess someone must have found a cellular mod :) There is a keyboard mod quoted in the instruction book that enables 800 MHz receive except for cellular. Maybe someone found another one?

The "official" keyboard mod is 14623 to enable transmit from 142.5 to 149.5 and 438 to 450 MHz. I've learned that 14623 followed by 11289 will enable transmit from 100-200 and 400-500 MHz. Anyone found any other interesting mods???

1405. transmitting on cell bands

Newsgroup: rec.radio.amateur.equipment

I wasn't bragging but merely pointing out that upon calling both, HRO usually has lower prices. I did not say I BOUGHT from either of these two, just making a comparison between the two LARGE retailers mentioned.

Yes, I've dealth with Lentini and they are GREAT, as is THE HAM STATION, and the smaller retailers.

Not using the radio for a day after the fuse blew had no influence. The fuse
blowing, however, _IS_ significant.

>Well let me know what you think please. I'd hate to take it to Rat Shack
>for something I could troubleshoot, but I'm running out of bright ideas.

Or something you can't troubleshoot. But could fix. But anyway...
Try replacing the broken wire leading from the PC board to the center pin of
the coax connector. And don't leave the radio on you belt when you sit down.
The force against the antenna wiggles the center pin of the BNC connector,
causing excessive flexing of the (solid) wire mentioned above, causing it to
break.

HTH

Matt

I will have to get my hands on it to make a final decision. The dual
receive is very nice (even if it is in-band (it is isn't it?)), and the 570's
QSK lacks (assuming the Yaesu's is at par with the rest of their stuff
(then again, the 570's isn't (compared to the 870 anyway)). The only
major dissappointment about the 920 is they used AF DSP, not IF.
If Kenwood can do it (870), why the heck can't Yaesu (ICOM (they
claim IF DSP on their 756 but it really isn't)). Oh well, real world tests
will tell. 73, Mike - WQ0N

1415. FS: Alinco DR-610T dual band mobile

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-18 00:00:00 UTC
From: stewart@wt.net
Message-ID: <3356f273.1088659@news.wt.net>
Source record: 177572

I have an almost brand-new Alinco DR-610T for sale. It is in absolute mint condition, with all original box, packing supplies, manuals, etc. I'm asking $450.00 plus shipping.

If you are interested, reply to: stewart@wt.net

In case you're not familiar with the radio, it is the top of the line Alinco dual band and comes jam packed with all sorts of amazingly cool features. For example:

120 channels (30 UHF, 30 VHF, and 3 "sets" of 20 channels each which can be mixed UHF and VHF.

Remote control of most of the functions of the radio (e.g. cross-ban repeater functions) with DTMF tones from a handie-talkie (and from the mic as well, of course).

Full and flexible cross band repeater.

9600 baud packet ready.

"Channel Scope" technology allows you to monitor adjacent channel OR frequency activity (VHF only, UHF only, or both at once!!!).

Detatchable remote-mount faceplace.

Can be used UHF/VHF, VHF/UHF, UHF/UHF, or VHF/VHF.

Internal duplexer.

CTCSS encode.

Expanded VHF and UHF receive.

Cross band repeat:

Power: VHF 50/10/5, UHF 35/10/5.

This is a GREAT radio... Let me know if you want it!

Could you be a little more precise? What exactly are you calling
"ping-ponging"? Are you talking about cycling? Are you using actual
repeaters, or converted mobiles? Good quality duplexers? VHF or UHF?

If it is converted mobiles, and what you are saying is they are
cycling, I think I can solve your problem. I've seen it before.

Murray Green <mgreen@erols.com> wrote:

This is second hand knowledge but the frequency is either in the 5GHZ or
10GHZ range. Also if the unit is like the old blue Amtech EZpass that
the Thruway used for a while, there is a small lithium cell inside. The
blue units could be opened easily by simply prying them apart. Haven't
tried it with the white unit yet.

1428. Re: FS: H-P 95LX Palmtop PC for Portable Packet

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-18 00:00:00 UTC
From: Phillip <maccabeus@gatecom.com>
Message-ID: <01bc4bec$224bf6a0$436157c6@520d>
Source record: 177585
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

I am not selling mine... In fact I am working on running JNOS on it.
I have been happy with my 200 for 4 years and use it often. My
DAD though has decided he hates DOS. Therefore he purchased
a PB pentium. I cleared this up in my initial post. You setup is
SIMILAR to mine but dont imply its the same thing. It is infact a
scaled down version(no offense for my station is a scaled down
version of a packet BBS itself). I make no profit if my dad sells
his HP therefore I am NOT self-serving anything.

As for your omnibook, all those features eat up batterries. How long
would
it run packet on batterries. The omnibook vs Palmtop is a battle of
apples
and oranges. each has a specific strength. The Omnibook would lose
out to the palmtop in my needs but may win out in yours. They can not
be put against each other in a fair way.

As for the 95lx. My packet station pushes the 200lx to its limits...
LITERALLY. JNOS is going to be a tough solve. The 95 simply is not
capable of meeting my setup. No offense it just does not have the
capabilities. Even the 100 would be pushing it. I have gotten alot of
email
on 200lx users and seekers trying to duplicate my results. And with the
95
I simply can not guarrantee the same. ANd I dont have the time to explain

that to 100 people. This is why I know of people trying to sell their 95
for a
200. This demand is causing 200s to be pricy. Also HP-s stupid decision
to
end DOS palmtop production isnt helping seekers any.

and again, my dad dropped his email account and therefore can not sell his
palmtop on the internet where I can. Perhaps I will forward anymore
95users
seeking portable packet operations to you. Just as I forward portable
pacsat users to another. I knew Ild be flamed and frankly it still saves
me
a lot of wasted email from people I can not help.

If I offended you i am sorry but when you have someone comparing their
similar
station to yours and then you get email from people with less similar
stations.
I get email from psion users and I had to create a general FAQ for non-hp

users who think every palmtop is the same.

I suggest you write about your station. Perhaps you know enough about JNOS

and can tell me where I can find the whole source code of KA9Q NOS. I
also
dont need mail from people running TNCs I know nothing about. I wrote
what I am
doing and am happy to help others do the same. Beyod that...

73 and hope to hear your success story. Would you like me to add it to my
web page? Ild be more than happy to. I already added N1RWYs palmtop
packet page.

Douglas Gavilanes <gavilan1@earthlink.net> wrote in article
<3355F094.9EF@earthlink.net>...
| | Hey Bud,
| Before you shoot down someone else's equipment just to sell your
| own,
| keep in mind that besides being a really self-serving and inconsiderate
| person, that you're misconstruing what was written in the original
| message you shot down. What was written is that the 95LX is good for
| portable packet (and I have proven this to myself over the last two
| years with a Tiny-2 TNC and my HT), like what was shown on the cover of
| the issue of QST in question. It doesn't say "the same unit featured in
| the article". Look before you leap - the precipice may be greater than
| you think.
|
| If your unit is the one exact same identical 200LX featured in the
| article, why are you selling it? According to the article, you sound
| very happy to take it anywhere. I guess not, huh? why do you
| self-cenetered folks have to take your frustration out on others? I
| couldn't stop you from selling your 200LX if I wanted to. You forget
| that there are more than enough people interested in your palmtop to
| where I am not threatening your all-important sale. I was going to list
| my HP Omnibook 100 (hi-res LCD VGA display, built-in mouse, PCMCIA,
| infrared, HDD, etc., etc., with AC adapter and serial cable for $250,
| but I haven't had the time to do so yet. How does your fancy 200LX
| stack up against that, bud? This is a notebook, but in addition to
| running Windows, it sure can run packet "at least as good" as your
| "celebrity" 200LX.
|
| Get a life. I'm selling my 95LX palmtop for portable packet. That's
| it. It WILL do packet with a TNC, no matter what drivel you wish to
| share. I'm just sorry that you probably assumed I was trying to head
| your sale off at the pass.

>>...any comments on radio shcaks HTX-202 2 meter ham radio.

Well, it isn't "pretty" to look at. It isn't ultra-mini in size. It isn't capable of receiving cell phone calls...

But if you want a solid performer - it's hard to beat.

The HTX-202 has 12 independently-programmable memory channels, plus one calling and three priority channels. It comes with continuous tone squelch encode -AND- decode. Power output is 5 watts minimum (7w typical) with 12 VDC supply, 3 watts @ 9 VDC or 2 watts @ 7.5 VDC. Low power setting provides 1 watt output. A power saver circuit with programmable 1/2, 1/4, 1/8, or 1/16-second duty cycle. Batteries are compatible with larger ICOM (IC-2AT/IC-32AT) series HTs.

Repeater offset can be adjusted from 0 to 4 MHz in steps as set by the scan frequency step selection (5, 10, 20, 25, 50 or 100 KHz). Memories store any offset, and any combination of continuous tone frequencies.

Supplied with Nicad battery, charger, 6-cell alkaline battery case, antenna, wrist strap and belt clip. Features include:

* True FM modulation (not phase modulation) for outstanding transmit audio and best performance in packet service.
* Continuous tone squelch transmit and receive tones are independently programmable.
* In addition to DTMF dialing, there is 5-digit DTMF selective paging (DTMF squelch).
* A five-number memory dialer that stores 15-digit sequences for autopatch use or DTMF paging.
* Scan for either active -- or vacant -- channels, with programmable scanning step of 5, 10, 20, 25, 50 or 100 KHz, and upper and lower scan limits (for VFO scan.)
* FAST, 25 channels/second scanning.
* Selectable priority channel scan interval, every 4, 8, 12 or 16 seconds.
* Multi-function scanning lets you scan standard memories, priority freq. memories, or a frequency range. Resume can be after 10 seconds, when carrier drops, or remain on channel (don't resume.)
* Transmit timeout - if you frequently time-out your local repeater, this circuit will stop transmitting after a preset delay (30, 60 or 120 sec.) and sound a beep. In effect, it forces you to reset the repeater before the repeater times out. Of course you can disable the timeout circuit.
* The HTX-202 carries a 1-year parts and labor warranty.

Subjectively, this HT has exceptionally strong, un-distorted receive audio you'll really appreciate when walking around the local (noisy) hamfest. You won't believe the sound is coming from an HT! Transmit audio is crisp, clear and strong.

From an Owner: "I put a 5/8-wave mag mount on my car, and used the 202 in the very intermod-rich downtown Ft. Worth, TX area. I've never been able to use an HT on an outside antenna within 2 miles of downtown Ft. Worth before. This one performed magnificently. My ICOM 2400 dual-band mobile gets less intermod than any other radio I've used in this environment, and the HT stayed with it, toe-to-toe. When the ICOM heard intermod, the 202 heard it, but when the ICOM was quiet, SO WAS THE HT!"

Even more impressive, the HTX-202 heard signals through the intermod, when the IC-2400 could not pull 'em out! Reason is probably because the HTX-202 is purposely limited in coverage to ham band ONLY! It can't be modified for out-of-band receive. The design objective was to build a specialized ham radio product that does the best possible job on the ham bands, and that includes the tightest, most intermod-free front end RS could design into an HT! The published spec says intermod attenuation is 60db minimum. Spurious response and adjacent channel rejection are also 60db.

A comment regarding omnibooks - you might be tempted to connect the
omnibook power jack to an external DC power source in this situation...

Based on material I've read in the past, this is quite hazardous if you
also plan to connect something to one of the I/O ports (as in using the
serial port for a packet radio connection) - it seems there are unexpected
DC paths involving the power jack and the I/O ports that can result in
damage to the omnibook.

>>...12VDC, 3 watts...
>>...9VDC, 1 watt...

Craig - how are you making your measurements? Your numbers seem to be very "rough" ("3 watts" and "1 watt" - versus, say, 3.2 and 1.1, or something more precise).

I am not familiar with the HTX-404...but am intimate with the HTX-202.

Built it last month and have had lots of fun with the simplex repeater option- useful for testing equipment and hearing what you sound like on the air under different conditions. I tested the duplex side and it works fine. No phone patch, of course.

The board was well done, parts list complete, adjustment easy. I'd say go for it.

Hi Everybody!
For my 2 cents, I have found the gang at the
New Hampshire store to be well informed and quite intelligent. Many
times I have called, not to make a purchase, but just to ask a
technical question about this or that. They respond whether I am
spending $ or not. In 1992 I purchased a AL-80B. It never worked quite
right from the time it came out of the box. I tried to make it right
for 3 weeks and it just would not come together. After 3 weeks I said
to Timmy that the darn thing was probably a lemon. He said " hey
Gareth, I have a brand new one sitting at my feet that just came in.
Pack up the one you have and drive up here and we will switch today -
even steven" The new one is in my shack today and has run just fine
foe almost 5 years.
This is a company with real class in my opinion.

VCO1 has four oscillators and two of them covers the range you are describing. ie: 1- 0-7.499mhz, 2- 7.5-14.499mhz, 3- 14.5-21.999mhz, 4- 22.0-29.999mhz. The #2and #3 are not locking initially usually due to the potting compound. You can try aligning them but that is only temporary.

Ken, no reason to flame you, because you hit the nail on the head with your remarks.
Ten Tec has excellent customer support, but no reason to declare the company holy.

I've had a TenTec Paragon radio in the past, I bought it because it appeared like a good, made-in-the-US radio, using glass-epoxy boards, professional enclosures, and real craftmanship.

Actually, it had all that. But, as it turned out, it also had other, less likeable features:

- The synthesiser digital electronics radiated digital noise in the receiver, very noticeable.
- The keypad on the front panel was of poor mechanical construction
- There is quite a lot of birdies, in spite of the very good shielded compartment construction
- The PA heatsink is mounted in the wrong way. For a good convection cooling, the fins need to be vertical, not horizontal. As a result, this heatsink gets very hot. I never could understand how Ten Tec can make a stupid mistake like this.
- The 12V bulkhead power connector on the rear is really a cheap one. I always was afraid that I would pull it out right from the chassis when attaching or detaching the power cable.
- The FM option is really a poor design. It is very wide-band, as they only use the first-IF filter in this mode and bypass the second IF filters. It would have been easy for Ten Tec to used the 8 MHz AM filter for the FM mode. Actually I modified the radio so that it does use this filter (simple modification) which improved the selectivity a lot in FM.
Also the center frequency in FM mode has a large error compared to the other modes. It would have been easy for Ten Tec to derive the local oscillator that they now generate on the FM board, directly from the synthesizer module.
- The battery backup was a 9V cell, and didn't last very long. This was designed in a time that all other major HAM manufacturers had long-life battery backup already, using a 3V lithium cell.
- The PWB boards are glass-epoxy, but had cheap, bare copper traces, unplated. I have never seen that in other rigs. It also looks real sloppy, like a homebrew rig made by someone that didn't have the means to make professional PWBs. Other manufacturer's rigs have this plated, to prevent corrosion.

I agree with Ken that if Ten Tec would bring out a rig that is truly new and advanced, and they have the brains in house to develop that, I would buy it on the spot.

A truly new Ten Tec rig should have :
- General coverage RX and MARS TX (this crystal mixing synthesizer concept that they like so much themselves for the Omni-VI I think is silly)
- Low phase noise DDS
- Motherboard construction with plug-in daughterboards
- IF DSP (Watkins- Johnson can do it, Ten Tec should be able to do this too. This is REALLY where an American, communications-equipment producing company could beat the Japanese!)
- Good mechanical construction for front panel controls, but ALSO for the jacks and controls on the rear!
- 50 MHz capability
- All mode, also AM and FM
- All internal frequencies derived from master TCXO, 1 PPM stability
- Good, solid flywheel feel on frequency tuning
- AC power supply built-in

Things like dual-receive, compact design, memories and built-in ATU I don't care about at all. On the contrary.

For a Ten Tec rig like this, I would pay $3000 + without a problem.

But guess what: A rig almost like this already exist, the FT990 from Yaesu. I have that rig now for 3 years, I have never had a better rig. And believe me, I had many. It offers almost everything that I listed above, for less than $2000. The only thing I miss is the 50 MHz capability, and an IF DSP, but the low price more than makes up for this. Will just wait till SOMEONE turns out a good rig like this, in the meantime I am very happy with my FT990!

Maybe Ten Tec can use the above in their advantage. Because I DO like American-built stuff, even if it costs a bit more.

1451. RC-85 Repeater Controller for sale...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-18 00:00:00 UTC
From: Bill Childers <childers@garlic.com>
Message-ID: <3357FA88.4E1F@garlic.com>
Source record: 177608
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Our RC-85 controller is about to be taken out of service. This RC-85 is in great shape, and is fully operational, with Version 5.2 firmware (last revision for the RC-85), and manuals. The controller will become available for sale on Monday, April 21. (We're bringing it down off the hill on Saturday.)

We're currently taking offers for this unit... please respond via email to childers@garlic.com.

73,
Bill Childers
KE6VVW

Control Operator, K6THR Repeater, GVARC

The QRP+ transceiver is no oonger in production - I understand from talking form the guy at Index Labs a month or so ago that the SGC will be producing an updated version (0 to 20 watts, USB & LSB, built in SWR meter, backlight, etc. etc.) using surface mount technology. Supposed to be 2"x6"x6" , <200mA on receive.

Have a browse through SGC web page at www.sgcworld.com

I feel that Bob Ferraro did the right thing in calling you up. In
addition he should have given you a "GIFT CERTIFICATE" for $$ to make up
for the foulup. The gift certificate would force you to give HRO another
try. Also the salesperson who refused to ship the Amplifier
to you because it was not in the box should be repremanded. All hams
should post any bad Ham Store reviews that happened to them and also
post positive experiences also.

In spite of your personal preferences, the various rec.radio.* newsgroup
charters specify that the WTB and FS ads are supposed to go into
rec.radio.swap. It helps to keep the noise level down.

> Of the seven TM-241a radios I have been in contact with all have
>
> had one or more of the following problems.
>
> 1. Display get scrambled trash of mixed numbers and symbols.

Design flaw. The firmware doesn't do sanity checks. Kenwood isn't the
only one with buggy firmware, but their radios seem to have more than
their fair share of this sort of problem. There isn't much you can do
about this except complain. (Spikes and sags on the DC input can
sometimes cause the firmware to go off to la-la land, and the firmware
doesn't self-check to recover from this. You can try to make sure you
feed the radio really clean power. That does reduce the frequency of
this problem.)

> 2. Receiver sensitivity drops considerable when radio gets warmed up.
>
> 3. Transmitter goes intermittiant as it warms up with possible #2.

Final quality control problem. Do a VCO alignment. If VCO output is low,
receiver sensitivity drops, and if it unlocks, the transmitter shuts down.
When you properly align the VCO, these problems go away. If that doesn't do
it, look for cold solder joints, or the infamous potting compound problem
generic to Kenwood radios.

[snip]

> 5. Display is unreadable in very cold weather.

Nature of the beast. LCDs can freeze up in very cold temperatures (and
go totally black in high temperatures). This can happen to other radios too.
But there are LCDs with different temperature ratings. Kenwood may have made
a poor choice in specifying this part, IE they may have cut a corner here
on operating temperature range to reduce costs. Fortunately, the LCD will
recover when the temperature returns to the normal range.

> 6. Receive audio is trash sounding in very cold weather.

Fairly normal. It's off frequency due to the cold. That happens to lots of other radios too. You may be able to install a crystal oven, which is always powered, on the reference crystal to cure this. Or you can try substituting a higher quality reference crystal.

> 7. Hi power operation overheats PA and heatsink gets super hot.

Generic problem with Kenwood VHF/UHF radios. I've complained about this one for years. The TM731 was even worse. They don't seem to be able to do proper thermal design. I had a 790A that you could cook eggs on after only short transmissions. That's unacceptable, and can lead to premature PA module failure.

I think Kenwood cuts corners too much. I believe this is a result of their consumer equipment heritage where saving a few pennies per unit mounts up to real money because of the large production volumes. That just doesn't fit with the amateur market. Volumes are much lower, our service requirements much more demanding, and a dollar or two won't make the difference in which radio we'll buy. (Amateurs are aggressive price shoppers, but that's mainly to see which dealer will give them the best deal on a particular radio they want, and isn't the primary factor in choosing which radio to buy.)

I am looking for this also.

I talked to a ham who works for radio shack today, who says their manafacturer messed up and used a micropressor they had in stock rather than wait for the new one.

The radio is capable of transmitting out of band and scanning cell phone freq's., both are a FCC no-no for type acceptance.

The person who discovered this bug posted it on the internet and thus the demise of the HTX204.

I am looking for the original post if someone can point me.

1470. Kenwood TS 450 Questions?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-19 00:00:00 UTC
From: tjenk@sccoast.net
Message-ID: <5jalhl$fr5@news1.infoave.net>
Source record: 177377

First of all I am not a Ham so excuse the ignorance of my questions. In talking to my uncle about his Kenwood TS 450 SAT he said it was not Xmitting at full power. After bench testing with power supply and oil filled dummy load, no SWR, we had 68 Watts. This unit is a 100 watt radio. To confirm the meter we tested another transmitter and it tested to full rated power. My suggestion was to ask others if anyone else has had this problem? Has this radio had any classic problems relating to this symptom? I did find some info on the driver circuit before the final output. It mentioned a replacement transistor and mod. Anyone who has any input let us know.
My second question is: Does this transceiver have computer interface and what software is available to control it? My uncle just turned 80, and got his first computer. This would be of great interest to him if he can combine his old and new hobby.
Any info would be greatly appreciated. Thanks in advance. Please post and respond to both our email addresses.

#1. Sounds like the protection circuit is out of alignment, it is very
touchy to get right and picky if not right. You didn't mention what band
this was occurring on nor if the power levels varied between the bands.
These would be symptoms of the protection circuit. Do not mess with the
drivers, that was for replacement of them with a different type in the
event of failure.

#2. The radio will talk to a computer via a IF-232C level converter. In
numerous websites there are control programs that will work with this
radio.

Kenwood TS-50, New price @ AES=$1019 -- Asking $750
Kenwood AT-50 Antenna tuner, New Price @ AES=$329 -- Asking $245
Kenwood YK107C CW Filter, New price=$129 -- Asking $90

All in excellent condition, no scratches or marks. Original boxes and manuals. Purchased new 3/94. The AT-50 was used only about 30 minutes, I ended up using an SGC tuner instead, because of the type of antenna. It has served me well and since I don't need a small radio, like I thought I might, I have upgraded to a TS-850.
I'll pay COD shipping.

1481. Hallicrafter S-240 info needed.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-19 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <5jbg0t$88i@coranto.ucs.mun.ca>
Source record: 177388

I have a Hallicrafter S-240 shortwave receiver and would like to find out a bit about it. This is the solid state table top model with the FM broadcast band (88 MC to 108 MC).

How old is it?

Are they rare (I doubt it but had to ask)?

How many other solid state receivers did hallicrafter make and what models were they?

I seen a matching (looks just like the S-240) VHF receiver by hallicrafter. What model was it?

It's in excellent condition except it's missing the volume knob. Where can I get a replacement knob?

Where can I get a copy of a owners manual, service info or schematic?

1482. Hallicrafter S-99 or SX-99 value?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-19 00:00:00 UTC

> occur at about 7.6MHZ) It clears a while after switch on.

Symptoms:

Just dots across display and silence from speaker
for only certain ranges in frequencies. The ranges
narrow down slowly to zero as the radio warms up
over a couple of hours. This problem was intermittent.

Other times, rig would make some kind of oscillating
sound over the normal audio. Also would be off-frequency.
As rig warmed up, oscillations would slow slowly to zero,
again over a couple hours, and over certain frequency
ranges which would narrow over the warm-up.

I had these problems with my ts440s for a few YEARS.
I bought the rig from Erickson's (now defunct) in
Chicago. The rig was out of warranty when the problem
began. Erickson's sent the rig to A.E.S. in Milwaukee
for repair. Came back, a hundred and some odd dollars
later, with the problem still there. Erickson's sent
it back two additional times. Problem got better, but was still
there and got worse over time.

I e-mailed Kenwood. They sent me three service sheets addressing
the problem. (What, I'm supposed to be do these repairs?) I felt
that since this was such a common problem with the 440, that
Kenwood should have offered a free repair.

I finally, in desperation, sent the rig to Kenwood's east coast
repair facility. Three weeks, and a hundred and twenty bucks later,
I now have a perfectly working radio. I use this radio with a dsp
unit for everything from ragchewing to rtty, to weak signal
contest cw'ing. I absolutely love it. Great rig.

So do yourself a favor. Send the rig to Kenwood. Mention that
you know it's a common problem, and maybe you'll get a price
break on the repair! Didn't work for me, but maybe you'll
have better luck.

73.... Mike

A lot of newcomers may or may not know this. Hell, they may not know
hat a FAQ is, or where to look. The title of the group should be
rec.radio.amateur.equipment.discussion or something similar. If you
were new, and saw the title as it is now, wouldn't you think this is
the place to sell equipment? Also some servers may or may not access
all the groups.

On the subject of "noise level", some would think that the HRO and cat
pee threads, as well as old what's his name the teacher (Who
thankfully has been absent of late) might well be considered noise
level by many.

It would be a simple matter to set up a killfile for any ads
containing "FS, WTB",. etc.

** FoxGap CW Station Identifier **

This unit is great for repeater identification, when your machine is up and running, or when you are down for repair and want to maintain a presence on a desired frequency. Also it is perfect for beacon use, just add a transmitter. For beacon use it will control your PTT on your FM rig, or key your output in sideband mode.

Features:
- Adjustable CW speed, 5 to 60 words per minute
- Adjustable code tone, 200 to 1200 Hz
- 55 character message buffer, plus a
- 55 character alternate message buffer.
- Eeprom memory is non-voltile. over 100,000 write cycles.
- Power monitor. will auto-restart in event of loss of power
- repeat message time, 1 min. to 24 hours.
- PTT output and Key (or beacon) output.
- BUSY (COR) input (active high or low).
- BUSY hold of delay timer.
- programmable from your IBM computer.
- Windows 3.1 or Win 95 compatible.
- adjustable audio output.
- programming cable is supplied.
- small size, 3" x 1.25"
- standard 12 volt operation.

Programming requirements: IBM or compatible computer with a mouse and one 3.5" HD floppy drive, running Windows 3.1, Win 95, or higher.
And a second COMM. port (2,3, or 4).

The FoxGap CW Station Identifier lists for $69.95 For a limited time the intro offer is $50.00 Shipping extra. We can ship UPS COD cash only, MO, or certified check. For further information contact Jim at 610-588-0282
Fax 610-588-0253 Or email n2gkw@epix.net

I also had the same problem and cured it by tearing the radio appart
and cleaning up the glue (not an easy task). Since it was such a
widespread problem Kenwood should openly admit to it and do the repair
for free. Every Kenwood TS-440 will have this problem eventually.
This is main reason why I do not buy Kenwood products. Around the
same time I owned a Kenwood Dual band mobile radio model Tm-731???
I'm not sure but this was about 6 years ago. Anyway the radio kept
losing its memory settings if the power was shut off. I found out
that this was also a problem since several of my friends had the same
radio and same problem. Kenwood said it never heard of this before
even though most owners of the model were sending in the radio.
Finally after the problem reached epidemic proportions they had to.
I had a problem with a early serial # Yaesu FT-900at that kept shutting
off own its own. Once Yaesu came out with a new CPU chip that corrected
the Problem they repaired all units in/out of warranty. Same thing on
a Yaesu FT-990 etc . Buy only from a company that will back up its
product. Do not buy Kenwood!

About Lentini, I had a friend who drove up to Lentini's and spent
about $150 on a Astron 35M power supply and about $1300 dollars an a
new Yaesu Hf rig. I don't remember the model number (sorry).
Anyway, my friend (who was about 70 years old) took the radio home.
He returned the rig in about 2 weeks because he could not see the
analog meter very well, his eyesight was failing because of his age.
At this time my friend chose to exchange the rig for a Kenwood TS-450S
with the built in antenna tuner. This radio had a digital, bright,
easy to read meter. Lantini was delighted to take the rig back!
HE ONLY CHARGED MY FRIEND 150 DOLLARS
RE-STOCKING FEE after buying the TS-450!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
Now ain't that nice !?
Oh by the way, My friend dealt with the owner both times.

1498. Swan 700 Finals

I am trying to repair a Swan 700. I am trying to find a pair of finals. The only place that I have found that can get them wants $97 each. I was told I could use a different tube with a little mod to the radio. The current tubes are 8950s. Any help would be appreciated. Thanks

Here's a reply I got from SGC corp re Index labs;.....
****

Thank you for your interest in SGC and Index Laboratories.
In response to your inquiry and concerns, we have attached a statement
from
Bruce Franklin of Index Laboratories.

The following letter was received from Index Laboratories by SGC on
4/9/97.

The purpose of this letter is to clarify the relationship between SGC,
Inc.
And INDEX LABORATORIES.
SGC has contracted with Bruce Franklin for engineering design services
to
develop a new transceiver, the SG-2020.
SGC has not acquired INDEX LABORATORIES, its product line nor its
customer
service obligations.
Warranty service for the QRP PLUS Transceiver will continue to be
provided by
IINDEX LABORATORIES.
SGC will be responsible for manufacturing, sales and customer support
for the
SGC 2020 transciever currently under development.
Sincerely,

Signed "Bruce Franklin"
INDEX LABORATORIES
9318 Randall Dr. NW
Gig Harbor, WA 98332

The latest details and updates regarding the SG-2020 transceiver will be
posted regularly at http://www.sgcworld.com
Our projected release date is posted there with much additional
information.
If you need additional information, please let us know.

Best Regards,

Robert Gregg
Sales Director

A second thought just came to me. Problem could be precip static. What kind of antenna do you use on the repeaters? Folded dipole designs are very quiet as a rule. Others are not. High wind, snow, and rain can cause static to build up. It can usually be detected as it will desense and noise up weaker signals.

In article <3356CB3B.1FC9@erols.com>, mgreen@erols.com wrote:

Marty, what is getting bad? Is the equipment getting bad and hams want
to sell it? Is the introduction of new radios getting so bad that hams
have to sell their 4-month old "state-of-the-art" stuff to buy this
weeks Yae-com-wood intruduction? Maybe we should just buy radios and
not sell them - like guns, you can never have too many!
I would rather see folks selling stuff than the inane "whats the mod (so
I can transmit on COP frequencies or listen to cellular phones) posts?
And let us not forget the "Teddy Bear" posts that just wouldn't stop.
So, gosh, someone is trying to sell a radio. Should we also be
concerned that others are trying to find or buy, as in WTD and WTB,
radios as well?
I'll probably feel a little guilty for responding to this, but sometimes
you feel like a nut...

From: kovar@zeus.ia.net
Message-ID: <5j9bu3$nma@hera.ia.net>
Source record: 177499

I have a feeling this could be the Lemon of 2mtr mobiles.

I have not based my information on the net post, only local

complaints of trusted hams here in Iowa.

All are owned by older Hams on limited bugets and found them

a very good deal for a new radio????????????? Maybe!

Of the seven TM-241a radios I have been in contact with all have

had one or more of the following problems.

1. Display get scrambled trash of mixed numbers and symbols.

2. Receiver sensitivity drops considerable when radio gets warmed up.

3. Transmitter goes intermittiant as it warms up with possible #2.

4. Receiver audio get fuzzy sounding at times unknown.

5. Display is unreadable in very cold weather.

6. Receive audio is trash sounding in very cold weather.

7. Hi power operation overheats PA and heatsink gets super hot.

As you can see some of these problems overlap.

I am just sick of seeing older hams thinking they are getting a great

deal on this radio. Hearing local results may save you some grief.

I would be very interested in hearing your results GOOD and BAD.

PS, I have other model kenwoods that are fine rigs.

I had the same problem with mine and was cured by removing the so
called glue in the area where the individual VCOs are located. This was a
lengthy process due to the amount of glue and the way it permeated into
every crack and crevice. Kenwood used this stuff to stablize the parts
and it broke down after time and became conductive and corrosive, this
also means you may have to replace a part or two.
I did this myself so I could save some money but this is not an easy
task so I do not recomend to try this unless you have some experence. AES
will do this job for around $100. There is another area on the board that
suffers from the same malady and needs the same attention.
My rig works great now and happy with my savings.
Good luck and 73 Rod KB8DNS

No, Ted. It is not unlawful for a ham to own and operate a President Lincoln. We hams are responsible for our emissions. The FCC could care less about how we create those emissions. Heck, we can even build our own rigs.

On the other hand, it might be unlawful for a retailer to sell such a radio.

Hi
I bought secondhand IC24ET some years ago. It is one problem - the antenna connector loosens now and then and it is necessary to solder the wire to the PCB. Last time I soldered it, the rig went defective, drawing excessive current when activating PTT. I use it only at QRPP (0.5W) and 8V supply voltage.
Do you have any idea what might have been shortcircuited??

> trying to do good!

That's because my erroneous conclusion was a mistake that anyone with normal logic could make having compared the info that was then available. HRO understood this and that's why they dropped the matter. Larry seems to have so much dificulty dropping things that by the same line of logic it makes one wonder if he can drop his pants to take a crap... or is someone still changing his diapers for him?

(Sorry folks... I couldn't resist that one).

> How easily did they follow the loud mouth piper over

It also makes it hard for people to complain about bad users, but then
look at who is the Admin there.

> if Ted Hershman is sued over the HRO thing,

Ted Hershman? Hmmm... An admin who doesn't even know how to work finger!
What a dolt!

> I have learned one very important thing. There are Ted Hershmans

> or keep them from doing what they do. I can ignore them! Thanks Ted.
>
> Larry Robison W9MDX
> w9mdx@netohio.net

At least I say what I have to say and,(unless someone replies), move on
to something else.

Larry on the other hand, has convinced me that he LIVES to psycoticly
pursue and pursue anyone he doesn't like. The word obsessive comes to mind.

He's mad as hell because HRO decided to consider the matter closed and because he, with a rather weak cause to complain, couldn't convince my ISP Admin to kick me off this system. What he didn't count on was my Admin being a fair and just man, who doesn't easily get talked into sharing some kook's vindictive obsessions.

Sure I shot off my mouth and was wrong... it happens. Admittedly, it happens to me a little more than many, but then not as much as some. But I'm not BENT on obsessively harrassing people.for eternity. I say what I have to say with a passion and then I move on to another thread.

I only get negative when I feel something is wrong. And any honest person would admit that there is alot of things wrong, in a wide ranging variety of severity from insignificant to atrocious. But I don't relentlessly pursue someone who leaves me alone. Larry will only learn to leave people alone when he provokes someone with a worse temper than I have to put a bullet in his head. That's what happens to stalkers nowadays, as recently reported in the news. One day his obsession could compell him to bother the wrong person if he isn't careful. There is help available for such compulsive obsessions, but people who have them also have delusions of grandeur that won't let them see that they need help.

As for complaining, some people are apathetic about nearly everything and some are zealous about nearly everything. But if there is a man among you who says that he has no pet-peaves at all I'd have to say that that man either lacks honesty or lacks a pulse! We ALL have something we gripe about. In other words, there was plenty of bitchin' & moanin' before I got here and there will be plenty bitchin' & moanin'when I'm gone so let's GET REAL! Nobody here is any better or worse than I am in their own way. The only person that was better than someone else proved it by walking on water and rising from the dead. I bet Larry thinks he could top that. I know I can't.

Ted (ted@caprica.com)

Subject: Kenwoods TM-241a Problem Child?
From: kovar@zeus.ia.net (Jack Kovar KE0AX)
Date: 19 Apr 1997 02:50:43 GMT
Message-ID: <5j9bu3$nma@hera.ia.net>

I have a feeling this could be the Lemon of 2mtr mobiles.

I have not based my information on the net post, only local

complaints of trusted hams here in Iowa.

All are owned by older Hams on limited bugets and found them

a very good deal for a new radio????????????? Maybe!

Of the seven TM-241a radios I have been in contact with all have

had one or more of the following problems.

1. Display get scrambled trash of mixed numbers and symbols.

2. Receiver sensitivity drops considerable when radio gets warmed
up.

3. Transmitter goes intermittiant as it warms up with possible #2.

4. Receiver audio get fuzzy sounding at times unknown.

5. Display is unreadable in very cold weather.

6. Receive audio is trash sounding in very cold weather.

7. Hi power operation overheats PA and heatsink gets super hot.

As you can see some of these problems overlap.

I am just sick of seeing older hams thinking they are getting a
great

deal on this radio. Hearing local results may save you some
grief.

I would be very interested in hearing your results GOOD and BAD.

PS, I have other model kenwoods that are fine rigs.

Jack Kovar
K0VAR
Iowa

I've owned mine for 2 years now through Nebraska winters and summers and have yet to have a single problem with it. 73 de Van

1525. HLP! FT-50 CPU SETTINGS

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-19 00:00:00 UTC
From: bcs@starnets.ro
Message-ID: <861456420.20233@dejanews.com>
Source record: 177509

Hello everybody !

I nedd your help to set-up the internal CPU settings for YAESU FT-50.

I wish to gnow the default values for the following settings:

VHF:

HSSQ
*THSQ
*TISQ
*S1LV
*S9LV
HPO
L3
L2
L1,

and the same corresponding settings for UHF

!!! Do NOT push the KNOB while diplaying the * marked settings !!!
To enter to the CPU mode settings the action is :

1) reset the FT50 by KNOB+MON+POWER-ON
2) press LAMP+PTT+KNOB+POWER-ON
3) The display shows BAND A1(A3)
4) then rotate the KNOB WITHOUT PRESSING IT !!!!

To exit press POWER OFF again

Thnx in advance

Bogdan

==========
Al paints a very accurate picture. It is a neat little receiver.
One has to realize it is a regen and get used to that. Also, there
are a lot of powerful signals around (compared to the "good old days")
so some ideas like the broadcast trap, may help you.

I was impressed by the overall kit quality and rugged construction.
Also, the way they bandswitch and tune is very state-of-the-art,
although I do miss plug-in coils and tuning capacitors (and all
those hand capacitance symptoms....)

Cheers es 73 Dave K7HMP

1527. WTB: Heath / STANDARD ctcss board

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-19 00:00:00 UTC
From: putra000@uwp.edu
Message-ID: <5jalp3mtc1@news.inc.net>
Source record: 177511

I am looking for a source for a CTCSS board for my HEATH HW4P, which is made by STANDARD radio company. The number on the inside of the radio is 'W7261C0413 STANDARD' I think that the HW2P takes the same board. This is a sweet little radio, and I would like to get a little use out of it (440 is like a PL-only band! here anyway)... Also, I am looking for a source of parts for this radio. (I need the very top piece of the case , where the antenna, mic connectors , and knob is. The battery is slipping out!)

Thanks for you help, I will take any ideas or sugggestions.

How accurate is your wattmeter at low power levels? If you're measuring
output on a 20W or above range, you could very well be seeing "low"
readings simply due to the lack of accuracy in the wattmeter.

Hard to see any problem there. Many companies charge a restocking fee of at
least 10% when a customer has a change of heart on a purchase.

1539. National Weather Service equipment

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-20 00:00:00 UTC
From: Carl Morris <msftrncs@htcnet.com>
Message-ID: <5je5nq$c81@insosf1.netins.net>
Source record: 177323

Please give me an opportunity as an amateur to offer you a product for which you may be interrested.

Over the last several years several issues have come up, some concerning amateurs. One was about the reairing of the National Weather Service's transmissions. Another was about the protocol that the NWS used to diseminate warnings to specific areas. The first come out that amateurs could reair NWS transmissions over amateur frequencies for the direct use of amateurs, specially those involved in SKYWARN type activities. The second resulted in the formation of the Emergency Alert System.

We have created a device that can decode the Specific Area Messages contained in the National Weather Service's portion of the EAS protocol and reair those warnings over an amateur station for use in informing or activating amateur spotter groups.

We have been using a prototype device for several years and have found the medium to be much faster than older mediums and to be quite reliable. The final product is nearing a shipable state, and orders will start to be accepted soon.

To keep from wasting any more newsgroup time, I ask that if you want more information on what we call our National Weather Specific Area Message Decoder (NWSAMD) then please visit:

http://199.120.83.179/msftrncs/products/nwsamd/index.html

between the hours of 4pm and midnight UTC -0500 (CDT). Or check out old information on an old mirror server at http://inet.htcnet.com/~msftrncs/msftrncs/products/nwsamd/index.html .

You may also call 402-654-2482 nearly any day of the week from 9am to 10pm CDT or FAX us a request for more info, we'll FAX you back, FAX to 402-654-2102. You may request info by e-mail to at msftrncs@htcnet.com, I can e-mail you the HTML information or FAX you back information.

If you want, write to

Morris Softronics
PO Box 48
Hooper, NE 68031-0048

And we can send you information back via USPS mail service.

By amateurs for amateurs but there are also commercial applications for this product which include commercial paging, etc...

Carl Morris (N0YUV)

1548. Comments on TS-870, IC-756

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-20 00:00:00 UTC
From: Len Umina <umina@ultranet.com>
Message-ID: <01bc4de6$f9d90ee0$29647392@kirk.ultranet.com>
Source record: 177332

Tim,

I have one, and I also have an ICOM 756. I'm trying to send back the 756, it's a piece of CRAP, but the 870 is a JOY to operate. I have the voice module (I think it's a VS2 which is the only accessory) and it's fantastic.

I'm currently using the 756 as a bandscope for the 870 by looking at the 8.3 Mhz IF in general coverage mode.

The 870 voice message keyer is great for contesting and pileups, the selectivity is beyond imagination, and the overall "operability" is very high.

It's lacking in only two things I can think of. One is no dual RX capability for split operation. The other is that the extra antenna connection isn't used as an input and you don't get automatic selection between RX and TX of the other two jacks. For example, if you put up a beverage antenna and want to use it on RX and automatically TX on a different antenna, the 870 (apparently) will not do this. You have to do it manually by pushing a button.

Whatever you do stay away from the 756. They are in big trouble with this rig. Their "DSP in the IF" turns out to be the pick up point for their audio to the audio DSP (prior to the AGC), and major trouble is brewing over this issue and others. I doubt the right will be around for more than 6 more months.

73,
Len

1549. FS: Kenwood TS-430S HF Transceiver $375.00. Plus shipping. COD only.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-20 00:00:00 UTC
From: "David T. Messerschmidt" <messy@pcpros.net>
Message-ID: <335AAEC0.33B3@pcpros.net>
Source record: 177333

The transceiver includes an up/down scanning microphone.

I did not receive any documentation/manual when I purchased this unit.

The TS-430S has general coverage receive for AM, USB, LSB, and CW.
The FM unit was optional for this radio and is not installed.
My understanding is that FM is used on 10M or higher. I can not say how important this item would be for you, but most of my communications are EXPECTED to be with SSB. I currently can only monitor as my license is a Technician class.

There have been no mods done to this radio that I am aware of.

There are no additional filters installed into this unit.
The factory filters are what is in this rig.
There is an area inside the transceiver to facilitate three additional filters such as the narrow CW, narrow SSB, and wide AM filters.

There is a 12 volt wiring harness that also comes along.

Cosmetically, the front bezel is nice. On the top side, there are scratches (possibly from placing other equipment on top of it? I don't know for sure as I bought this radio used).

Operation is fine except for one item..., the squelch knob (internal potentiometer seems to have failed). This knob is actually two controls... outer is for the squelch and the inner is for the notch filter). The notch filter works fine. I have not investigated the replacement cost for this, but would expect it to be around $10-$15.

There is one and only one reason for my posting this radio... I bought two HF radios in a two week time-frame! One was a Kenwood TS-850SAT for $1,180.00. The other is the TS-430S that I am posting. I went off the deep end when I got my licenses last year and bought the TS-850SAT (used) over the Internet. There was a three week delay in receiving the TS-850SAT (didn't know for sure if the guy was really going to send it) and then saw another posting for the TS-430S (also on the Internet). Needless to say, I pretty much had two HF rigs in a couple days time-frame. I have no need for two HF rigs.

The TS-850SAT is a better radio than the TS-430S in two areas... 1) I have additional SSB filtering (which the TS-430S will support if you install the optional SSB) and 2) automatic internal antenna tuner. That really sums up the big differences for me. For the TS-850SAT has more whistles and bells, but both have the same receiver performance/sensitivity.

I am only being as honest as possible with helping you determine if this radio will fit your needs. There are many Amateur Radio Operators using the TS-430s and many saying that they wished they had never sold theirs.

I bought the radio for the same price that I am selling it for.

If interested, you can contact me via email at messy@pcpros.net or telephone at 715-675-4904.

I reside in Wausau, Wisconsin.

Thanks much and good luck in finding the radio rig you are looking for.

I've had the scrambled display problems and have had it sent in 3 times. The first two times while it was under warranty. I don't trust it to go in the car anymore. Just use at as a base and don't mess around with it anymore than necessary to prevent problems.

Source record: 177337

Have been out of town, sorry for not responding. I believe, without looking it up, that the JT1000 VHF (also MT2000, HT1000, etc) is standard at 136-174Mhz, so no problem. UHF is a differant story. There are several band-splits available in UHF Jedi radios. The most common, unfortunately, is 450-520. BUT, they are also offered in a band-split of 406-470 (I would reccomend that dealers order this version unless they specifically need 470-520, makes the radio more valuable for resale, Hams you know!) If you get the proper bandsplit, you will not have any problems with amateur use, BE VERY CAREFUL, I have seen Jedi radios advertised as 403-470 but when contacted, was given a 450-520 model number!

Message-ID: <335AD762.7669D27F@hevanet.com>
Source record: 177339

Matches IC-735, but works with most any ICOM hf rig (with proper cable)

Multi-coax outputs; 1 random wire out
Pre-sets for each band make auto-tuning very quick and precise

Requires no external power; very small and lightweight

Has never fed with more than 150 watts
Absolutely showroom condition, inside and out

$300, including shipping at my cost ($529 in latest HRO catalogue)

1556. Will the ADI AT-600 Be Recalled???

If the radis isn't in the 2mtr range now (ie it is tuned to the 150 mhz range) you must retune the radio and then you can reprogram it. I did two a few years ago and they worked great. I may have the schematics if you will send me the modle of the radio you have.

Nick --
Centurion International makes a very wideband UHF antenna, only about 4" long, looks like a skinny spike with some sort of transformer or something in the base. I use them on my shop radios, and they usually outperform 6" 1/4-wave rattails.
For high band, they make two different models. I think one is for like 136-155 and the other is 142-170 or something. They're a little longer than a typical rubber duckie, at about 8 inches.
In my case, I use these in the reverse configuration from which you requested info: I use them for commercial radios in the business and public safety bands, and can also put in 2M and 440 freqs and not lose performance. Sorry I don't have better specs, but I believe Centurion has a webpage. Hope this helps.

Sorry Ted,

I am going to have to agree with ed, on this one, just for the simple fact that 99.9 percent of all ham radios are capable of transmitting out of band, and by being a former owner of an HR-2510, and an RCI-2950, both of which will transmit out of band the only stipulation to the matter is they cannot be sold this way, Manufacturers build these easily modifiable radios, one because of the different countries they produce them for, ie Chine, europe, which have different amatuer band limits and two, most of the mods performed most generally void the manuf. warranty, The Speed limit is 55 but cars will run alot faster than that. You yourself are responsible for the transmissions that you make. And I for mine and so on.

As Rich points out, the ads here are a violation of the non-*.swap
group charters.

I suppose that those who want the ads here could file the needed
actions to get the charter changed, but I doubt that will ever
happen... If they are too complacent to post in the appropriate
groups, it is doubtful that they will bother with the paperwork.

Just did a little checking of a number of the inappropriate WTB and
For Sale ads being posted...

Most are being cross-posted to rec.radio.swap and/or
rec.radio.amateur.swap as well as spamming them to the wrong groups.

Seems that the idea of the *.swap groups not being on someone's server
just don't hold water.

Source record: 177415

I own a TM-241a and have never experienced any of the problems that were mentioned, garbled display, bad audio, ect. the radio was used in both the house and in a variety of vehicles including a semi where it logged over 100,000 mi over all manner of road conditions some of which would bounce you out of the seat if you weren't wearing a seatbelt. The radio was left in the truck all the time -20 to +100 degree conditions and is now being used as a base at my home. I taped a radio shack speaker to the top of it so the audio was directed at me which helped in the noisy environment of the truck. One thing I would suggest is getting the backlit mic model, trying to access an autopatch at night isn't the easiest with the standard mic. It's not a fancy radio but I wouldn't hesitate to recommend it to someone.

1573. Using Mirage Amplifiers at 12v

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-20 00:00:00 UTC
From: axxis@infinet.com
Message-ID: <5jbpg4$nns@news1.infinet.com>
Source record: 177416

I'm wanting to purchase a Mirage Amplifier for 2 Meter operation. I do not currently have a 13.8 volt power supply and have been wondering if I could run the amp off of a 12V DC Deep cycle battery.

Some products perform fine when run at 12 volts, but I've had a few that absolutely *do not* perform unless they're operated at 13.8v DC.

Some ads for these amps list them at running at 12v, some list them as running at 13.8v...just wanna make sure it will work ok before purchasing.

Can someone please give me some info?

I have a Radio Shack 2m amplifier, new, that has the power cables, box, and manual. It is in excellent condition and really works good with any HT. I am asking $75.00 for it.

I also have a KPC-3 TNC with the cables (serial and power), manuals, software, and boxes. It works good and I have used the Radio Shack HT with the amp and TNC to contact MIR. I have used it to connect to the DX packet cluster and found the two work really good together. I am asking $90.00 for the TNC.

I will take $160.00 for both. Simply email me at dan@kb8uyz.com or danjr2@juno.com for more information.

Thanks,
Dan KB8UYZ

It doesn't sound bad to me. How many hams would pay full price for a
second hand rig, albeit one that had been used for only 2 weeks? What
is the right discount if 150 per 1,300 (11.5%) is too high?

I have one that belongs to my employer (law enforcement). It is a good reliable radio although spendy at $900 and another $100 for the programming module (last years price).
It outperforms my Kenwood TH79A, but is heavy (too heavy for everyday use for me as I work plainclothes.) As most Motorola's, it is heavy duty and stands up to lots of punishment.

1592. Out of Band XMIT Antennas (HT'S)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-20 00:00:00 UTC
From: dude@wherever.net
Message-ID: <335a5e2b.4808619@news.atl.bellsouth.net>
Source record: 177435

I see requests for differnent mods for radios, especially HT's. It would seem that if you modify an HT to transmit at lets say 475MHZ or 142MHZ (common UHF and VHF out of band frequency ranges) that you would need an antenna that is resonant near these frequencies. Where do people get these antennas? I never see them for sale at hamfests. The reason I am asking is because I know many public servants that might be able to use these as backup radios. Maybe they are there but I just never notice. Just a question. NIck

Hello Mr. G........

I thinks what you are overlooking is the theory of Supply and Demand. In this case, the Demand for a product that is no longer made, is very high. As you get more into scanning, you will discover that the Pro-2006 is a very desireable radio. It has many computer interfaces that make it an even more desireable piece.

I have two sitting here that I would not dream of selling for less than $500.00 each, and even then, I would wonder why I sold them. I can't replace them easily and it is, in my opinion, a hard one to beat.

Good luck with your endevors.....

Franz in Tahoe

Problem is that the FS and WTB ads in the r.r.s group are SO NUMEROUS!

A few specialized ads in boatanchors for example, are VERY welcome by
the majority of readers.

We do not want to wade through 150 ads for dual band VHF/UHF whatsits
and packet terminals trying to find a DX-100!

Why not take this thread to r.r.a.policy?

1599. Duplexer Question (cavities)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-20 00:00:00 UTC
From: Johnny Carter <n4gca@gte.net>
Message-ID: <5jd3j6dol1@news9.gte.net>
Source record: 177442

Just bought a set of DB products cavities (6) that are tunable for 146-174. I have heard that the phasing harness needs to be cut to special lenghts.
The person I bought them from told me he had added a copper ring that will allow them to be tuned down to 145. The split that I am putting them on is 145.33 down 600. He told me that I needed to put a new harness on them and that the length needed to be 13.5 " from tip to tip of each PL-259 (it is now appx 11.5). I would like to get this thing pretty close to what it really needs to be. Can anyone tell me if the 13.5 " is close to the proper length ? I will be using RG-214 for the harness so that might help in figuring the length of each cable.
If anyone feels that the length needs to be different, please holler and let me know how you arrived at your decision (so I can get a little wiser on this stuff).

Thanks

Johnny Carter

Most Dealers only back up the radio for 10 days from the day you
purchased it. None sell the radio for Evaluation. Your friend should
go to the local Ham store and sit down with the radio and take his time
making his decision. The Dealer cannot sell the radio as "BRAND NEW"
and will have to discount it inorder to find a buyer.
I think it is funny that for the amount of money we hams spend we
get the worst return/exchange policy in the world. Like at Radio Shack
you can return the radio up to 30 days later for any reason for a prompt
refund. Same thing at Sears etc. We are being scammed.

It should run just fine to the extent that the battery will power it.
Remember that the power output values that are published are dependent
upon the voltage input, so as the voltage drops, so will the wattage
output. In any event, it will beat a barefoot rig.

You might look in your manual and see if your radio is set properly to the correct offset ie: -600 +600 or simplex. Also determine if your battery has enough charge to make a transmission. It may have enough power to receive but not transmit. Ask any local ham how to purge a nicad battery of "memory" in case yours is not charging up fully. After charging you can check the voltage with a volt meter to see if it charged up fully. 73 Paul ki4xz@peganet.com

>#2. The radio will talk to a computer via a IF-232C level converter. In
>numerous websites there are control programs that will work with this
>radio.

You can homebrew the interface fairly simply - the radio side is TTL.
You need to invert all four signal lines, then run it through a MAX232
or similar. Serial parameters are 4800 8-N-1. A couple of web searches
should give you a schematic - rather cheaper than Kenwood's interface,
which retails in the UK for about UKP80.

The 'language' talked by the rig is documented in the 'computer control'
manual. I received a copy with the rig - it's a separate small book from
the rig's manual.

[Not emailed - my program won't deal with this too easily].

I purchased a Yaesu FT-416 2M handi at a hamfest yesterday. This is either the A1 or B2 version, (I don't know how to find out), with a TX/RX of 144-148Mhz.

What I would like to do is mod the radio to RX from 130-174. (match the A2 version) I know this is possible, but don't know how.

One note: I DON'T want to TX out of band, just RX. However, I am sure that any mods will affect both.

If anyone can help me, please contact me.

I am VERY unfamiliar with the newsgroups and how they operate; so it might be better if any responses are directed to mstaff@enhcom.com

Thanks to all, and 73!

Hi Cec - I'm reading your remark on r.r.a.boatanchors, and as I recall,
the charter for .boatanchors does allow for BA ads.

I wonder who the goofball was (M.A. maybe?) who originally included so
so many newsgroups? Neither .misc nor .homebrew have a problems with
lots of ads - only .equipment does, so followups should be directed
just to that group.

I'm selling my Kenwood TM-742a mobile that I
purchased about a year ago.

Features:
- Dual-Band Operation (2m and 70cm Installed)
- Tri-Band Capable, Add a Third Band!
- Simultaneous Receive on All Three Bands!
- 2-Way Detachable Front Panel
- 100 Memories per Band
- Cross-Band Repeat
- DTMF Remote Control Capability
- Mint Condition! Used as a Base Station!
- Optional TSU-7 CTCSS Decoder Installed

Includes:
- Comet CF-4160 2m/70cm Duplexer
- Daiwa 2m/60cm Cross-Needle SWR/Power Meter
- Original Boxes and Manuals for everything!
- Extra copy of owners manual.

Paid over $800 a year ago.
I'm asking $600 with shipping!

Thanks,
Steve White
N2RWE

I have a complete listing of Audio/Video/Photo/Computer and Amateur
Radio stuff that I'm selling at my company web site at
http://mypage.ihost.com/unitedsound

>wink@rpa.net

The FT-5200 does not have dual in-band receive;
The FT-5100 does have dual in-band receive.

The FT-5200 does have detachable control head;
The FT-5100 does not have detachable control head.

Hope this helps!

>wrong?

Sam - I'll betcha dollars to donut holes that you're looking
at it wrong ... you are looking at a point that triples,
then triples again to get to resultant (440 MHz) frequency
.. what you should see here is one ninth of frequency
(f/9), not nine times frequency.

Good luck!

>--

Here's the exact text, as taken from the "ARRL Letter" for
April 18, 1997, as found on their web site
http://www.arrl.org:

quote:

RADIO SHACK TAKES HTX-204 DUAL-BAND HT OFF THE MARKET

Radio Shack notified its stores April 17 that it's
immediately recalling unsold stocks of its new
HTX-204 dual-band handheld transceiver because of what a
source at Radio Shack headquarters
called "a regulatory compliance issue" involving the
transceiver. Radio Shack said it plans to take
the HTX-204 off the market and has no immediate plans to
offer another dual-band HT. The
HTX-204 started showing up in the chain's 7000 retail stores
about six weeks ago.

A Radio Shack official at the company's Ft Worth, Texas,
headquarters said the company was
concerned about the "potential for illegal use" of the
HTX-204. He declined to be specific, but he
did emphasize that the HTX-204 is perfectly legal for use on
Amateur Radio frequencies.

Radio Shack expressed disappointment with the turn of events
surrounding the HTX-204 and
directed any questions to local Radio Shack retail stores.

End of quote; end of article.

73 to all!

>any help will be appreciated . 73 KJ7VW

First thing that needs to be done is to contact your area
Repeater Coordination body, to retain coordination.
Retention of coordination on transfer of ownership is
normally routine, but does entail a little paperwork on your
part, and approval on their part. (If you are unsure who the
coordinating body is in your area, you can find them listed
in the ARRL Repeater Directory.) As long as nothing other
than ownership changes (i.e., you stay at same site, with
same antenna and power level, etc.), it should breeze right
through.

The next thing that needs to be done is to change the actual
call sign sent by the repeater; that needs to be done in the
controller - see your controller manual for details.

Good luck, and 73!

Source record: 177232

I like this radio except for a very annoying attribute. When a repeater un-keys, or any transmission stops, I get a terribly long "squelch crash". It was sent back to Yaesu, but nothing changed. I heard a friend of mines same radio, and it does the same thing. Am I the only one to notice this, or doesn't it drive anyone else nuts... especially when talking simplex? It happens the same even with the squelch turned up all the way.

Dave; I've got a Drake R8 and it sure beats the JRC NRD525 I had before.
Bought it new in '93 and I'm still finding ways to dig stuff out of the
mud with it. I've thought about replacing it with the R8A but I'm used
to working with the selector system it started with, and the latest
reviews don't have much good to say about how synchro works on the later
version!
Read the reviews in Proceedings '92-'93!

FOR SALE- I have a Yaesu FT-901DM station that works perfectly
and is in "MINT" like new condition.
Will sell items seperately.

FT-901DM just back from Yaesu for alignment to factory new spec's.
$575.00
SP-901P speaker/patch $85.00
FV-901DM remote vfo with 40 channels memory and up/dwn scan $230.00
FC-902 500 watt ant. tuner $150.00
Original YD-844 Desk Mic for 901 station $70.00

All prices plus insurance and shipping via Post Office.
All equipment works perfectly and comes in original boxes with all
manuals.
This is probably the nicest 901 station around.

The GRAPES IS the radio - what you need is a transverter for the band you plan to use it on and an antenna (or antenna's if you go full duplex) for that band. Plan on spending $300-$500 for the transverter depending on power output and band.

I wouldn't bother to try to cook them. Instead, they resonate extremely
well on 2 meters. They're much better as antennas. 73, k7jy.

Could someone tell me the specifications of the Marconi CH Twenty-Five
SSB Transceiver. All I know is this is a 6 channel 100 watts PEP transceiver.

What's the frequency range, is it crystal controlled, etc.?

Is this a Marine or Commercial Transceiver?

How old is it?

Mr. Hershman:

Do you happened to run a business that sales HAM gears? If you do, I would like to do business with you. But you'll have to find someone to work for you who will never make mistakes (yes, not even dumb mistakes).

I am not a boss, but I am thankful that my boss and my teammates forgive mistakes that I made. We all learn from mistakes and I believe that is a good way to improve performance.

If you don't run a business, I am thankful that there is at least one less boss to be feared of.

Best wishes and 73.

PLANKED CARP

Clean, skin, and fillet the fish. Marinate in cooking sherry for an hour
or so, then lay the fillets on an oak plank. Season to taste, and place
in a 475F oven for 30 minutes, or until the flesh separates with a fork.

Then throw the fish away, drink the cooking sherry, and eat the board.

I am switching from a Yaesu FT890 to an Icom 706, for mobile DX. I have heard unfaltering things about the Icom external tuner, especially pricing.

I have also heard that the Kenwood AT-50 external tuner will work. For those who are using this set-up...

Any problems hooking the two up?

Any special cables or modifications needed?

What type of antenna are you tuning up. I will be running the Outbacker JR. I know there are better, but space and area traveled preclude them.

Any comments or suggestions are graciously accepted.

Jeff,
It depends on what you are looking for. Do you want to have more then
one band in a radio? Do you want a moble/base, or a hand held. Mobiles
can be used as a base station (and often are), and put out a lot more
power. The only problem is they cost more. Look through a catalog with
a fellow ham in your area. Betwein the three of you, you will find
something that will suit your needs. Have Fun, and remember it's just
a hobby!

Unless you have a surface-mount rework station, I'd suggest staying out
of it. The R/S HTs are well made, but this isn't your run-of-the-mill
PC board technology. Working on surfacemount stuff without the proper
tools is like doing brain surgery with an axe, regardless of your tech-
nical fix-it skills. Send it back to R/S, they'll either fix it or re-
place it.

...and congrats on the new ticket.

I have used both on contests and would choose the IC-756. This is due to

getting 6 meters and the bandscope included for the same price. Yes,
the DSP in the IC-756 is pretty close to audio but it works great!
I recommend that you read QST MAY 1997 which just came out. The magazine
is pretty good at giving you the facts. What ever your decision I think
you will be happy with either.

1679. Noise blanker / speech proc KWM-380

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-21 00:00:00 UTC
From: Loek d'Hont <ldhont@ti.com>
Message-ID: <01bc4e94$e73ea520$8f0aaa9d@pc-tir22.pac.sc.ti.com>
Source record: 177273
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.swap

I have searched for the KWM-380 noise blanker board and speech processor board for almost a year now, it seems they cannot be purchased any more. It is just impossible.

Therefore I am planning to build these boards from scratch for my KWM-380

I would like to keep them as close as possible to the original, of course. For that purpose, I am looking for the original Collins documentation: schematic diagrams, part lists and PWB layout, and what else there might be.

Therefore, can any-one get me copies of the original documentation ?

Also, if there is people out there who are interested in this project and want to share the PWB board costs (and the results!) with me, please be my guest. I plan to have these (bare) boards done at a professional PWB manufacturer, which won't be cheap. So the more people we can find, the better.

Maybe someone else picked up this project in the past already. If you know that person, I would appreciate it if you send me his/her name.

1680. six meters help

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-21 00:00:00 UTC
From: al evangelista <aevang@amspay.otnay.cris.com>
Message-ID: <335C5283.1958@amspay.otnay.cris.com>
Source record: 177274

Hi Gang, I am interested in learning more about 6 meters technical and 'cultural' issues. I understand that the 6M season is approaching. Is it reasonable to expect consistent communication from, say, the midwest to east coast on a regular basis? on 40 watts? Any recommendations on equipment? / common modes SSB / FM / ?? - commonly used polarization?? I see 'fully featured' rigs at around the $400 mark - any less expensive alternatives?

Please reply directly if possible.

Many Thanks..

73

Looking for anyone who might be able to help me find a manual or information on an antenna my grandfather gave me.... The only thing it says is "avanti" on both ends. It has 3 vertical elements and the center one ends up in a big circle. It is in pieces at the moment and would like to know if I have all the parts and maybe get the thing back up in the air someday.

Thanks... E-Mail me at dakender@telepath.com

Good point, although the same effect might be better served by
separating the commercial gear. I am sure that the motorola guys are
as sick of sifting through the TS520's as I am of downloading 75
headers to find that 55 of them are for
trunking/sabre/jobcomm/phoenix/whatever commercial band rigs that
don't interest the average ham. How about rec.radio.commercial.swap,
and let r.r.s. pick up the rest of the SW/ham/scanner/CB/etc. gear?

Ok, it may not go in this group but I have to get the word out somehow so
I am letting you know here.

The funniest web site EVER has now officially opened using REAL AUDIO technology.

Blackout's Box
WWW.BLACKOUT.COM

You will laugh, you will cry, you will pee on yourself... you will cough up your lunch
from the intense amount of laughter you will be experiencing.

You MUST check out Blackout's Box at

http://www.blackout.com

Hear the most insane stuff you have ever heard, broadcast to your
computer instantly over the net with REAL AUDIO 3.0 which you can DL
for FREE if you don't have it already. This is not a commercial site or a business
or any other type of advertisement. It is just a very funny and very FREE site that I
want Everyone to know about. If you like Monty Python, Jerky Boys, Howard Stern,
Kids In The Hall, The State, Robin Williams, Who's Line Is It Anyway,
or anything like that - you will love Blackout's Box, there is nothing like it on the net.
Don't let the words 'prank call' scare you away.. this is no 12 year old fun, this is
intensely funny candid phone call radio drama that critics on and off the net are giving
two thumbs up.

Blackout's Box simply kicks ASS, stop whatever work you are doing,
take a break, and check it out now! Life is short - LAUGH some.

Blackout's Box
Insanity On the Net

1688. MODs to Kenwood ST570D for MARINE Band TX

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-21 00:00:00 UTC
From: Fred.Gerbstadt@unisys.com
Message-ID: <5jgckk$1p9$1@trsvr.tr.unisys.com>
Source record: 177282

I have a Tech ticket and only need code for general. I have a
Kenwood ST570D. I want to install it on my small sailboat for
a cruise in fall 97.

Question: What do I have to modify to permit the set to transmit
on the marine bands? Who can give me the info?

I have been told by a reliable source that it is an easy mod to do ...
like cuts and/or jumpers ... no magic like burning a new PROM or
something.

I do understand that I will need a marine license and that transmission
can only be done on a shipboard set. These are similar to restrictions
on my marine VHF radios. I regard having BOTH ham AND marine band
transmissions capabilities on my boat as a matter of safety. Marine band
allows coms to the Coast Guard, other vessels and ham Herb Hingenburger's
Wx net. Ham allows coms to the mobile maritime nets ... like on 14.3Mhz
which I can only listen to now (need that general ticket!).

Respond to Fred.Gerbstadt@unisys.com or this posting.

FRED

> I am switching from a Yaesu FT890 to an Icom 706, for mobile DX. I
> have heard unfaltering things about the Icom external tuner,
> especially pricing.

Not use what you mean by "unfaltering" ... but I used an Icom
736 with an Icom autotuner (I believe it was an "AT-2") on the
boat to tune the backstay ... it was insulated from the mast and
other rigging at the top and connected via a humongous bronze
turnbuckle to the chainplate at the bottom. The tuner was below
deck in the very aft part (about 20' from the radio) and was connected
to one of the bolts for the chainplate with a heavy insulated copper
wire (about 4 gauge) ... since the chainplate was throughbolted to
the fiberglass hull, it was insulated pretty well ... and the tuner
had NO problem loading up on anything from 160m (which I used
a fair amount at night from Mexico to the states (SSB)) to 10m.

I ran SSB and AMTOR predominantly, with a little HF packet once
in a great while ...

The key to this working well was grounding and bonding ... the engine
block (down below the floor in the bilge), prop shaft and prop, all of the
tankage (2x 70 gal. stainless for H20 and 2x65 gal epoxy-coated black
iron for diesel), as well as the ballast in the keel (a single 11,800 lb.
cast iron casting, encapsulated in fiberglass) were bonded together with
numberous runs of 4" wide heavy copper tape ... actually it was more like
a very long roll of flashing material ... heavier than typical tape ...

The radio(s) were all bonded to this ground system with the shortest
possible runs of the same copper and a double-wide run ran back to
the auto-tuner from the same point where the HF radio ground joined
the main ground system.

The large area of tankage and keel under water provided a LOT of
capacitive coupling to the sea water surrounding the hull and all
of the exposed surface of the propshaft, prop, and all of the bronze
thruhull fittings provided direct contact ... great performance and I
never had a hint of any electrolysis problems (errosion of underwater
metal parts) ... oh, I forgot, there were NO zincs on the prop shaft,
only two roughtly 4" x 6" plate zincs thru-bolted on either side of the
back, bottom part of the keel, where special contact pads of metal
had been cast to stick out flush to the surface of the fiberglass hull

at the right places. (The zincs would last 6 months, plus.)

> I have also heard that the Kenwood AT-50 external tuner will work.
> For those who are using this set-up...

Can't comment on the Kenwood tuner ... sorry.

>
> Any problems hooking the two up?
>
> Any special cables or modifications needed?
>
> What type of antenna are you tuning up. I will be running the
> Outbacker JR. I know there are better, but space and area traveled
> preclude them.

YMMV with the Icom tuner, using a shorter mobile antenna ...
I was loading about 65 feet of 5/8x19 stainless steel rigging
wire ... but for me the performance was flawless and the
reliability excellent ... I never had a moment's trouble in
5 years of bouncing around in constant use in the salt
environment of ocean voyaging ...

1699. IC-756 Problems

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-21 00:00:00 UTC
From: Len Umina <umina@ultranet.com>
Message-ID: <01bc4deb$0549b0a0$29647392@kirk.ultranet.com>
Source record: 177358

To all:

There is a very active reflector running for the IC-756 and I noticed that there is very little appearing here in this newsgroup about this rig, which is not good since there are a number of serious issues.

Users (I am one) are reporting on bad CW operation, problems with digital modes, noiseblanker performance, and probably the worst thing to come out yet is that there really is NO IF DSP in this radio!

Apparently ICOM picks up the audio prior to the AGC point and calls their subsequent audio DSP an IF DSP because of this! Allegedly when contacted on this by one of the other users, the ARRL mentioned the GAP antenna claims (you don't need radials, (unless you want the antenna to work))!

Yikes!

In any event if you are thinking of purchasing an IC-756 it would probably be a good thing to put off until the information is fully dealt with by ICOM, the ARRL, and the Justice Department (false advertising).

If you want more info you can send a subscribe message to ic756@access.spring.com. There are a number of people who are quite pleased with the 756, at least for the time being, and the rig does have some nice features, it's just missing a few of the ones they advertised and the selectivity, noise blanker, and CW operation are lacking.

Folks,

Here are two posts to the 756 reflector that may be important to anyone
active in digitl modes considering current version of the IC-756.

/Len N1LU

"FYI"
Also, anyone notice that the QST review of the TS-570 showed too slow of
T-R recovery time for TOR modes?? In the IC-756 review the T-R time is not
even listed!
Complication of full-time IF/AF DSPs???

I've had good luck operating my TM-241 in Ohio winters (and summers!).
I did have some difficulty with the display showing garbage
characters, which was quickly fixed with a shot of De-Oxit in the
connector between the display and the main board. It has worked
without fail since (about a year, now).

I'd buy another.

Actually, not to dissappoint, but RS blew out their pro 2035's for $199, so that ought to make mine worth at least $800! :)

They can be made to transmit out of band with a keyboard sequence.
The FCC told RS that they were not amused. (The FCC has had a
voluntary agreement with radio importers that they won't import
radios which can be used out of band without internal modifications.
This radio breaks the agreement.)

Contact Kenwood.
Ask for the manual for the IF232 interface for the TS-450 radio.
They will probably charge you $10 for this manual.
It describes everything you ever wanted to know about the interface.

If you want responses, leave your email address intact.

A lot of us just won't bother to reply if we have to spend
the time locating and editing that email address ...

Hello Everyone: I recently acquired an nice QRP station
from another HAM. HW-8, tuner, qrp wattmeter, speaker,
and power supply. This rig is outstanding in the 80/40
bands but somewhat less so at 20; Nothing at 15 Meters.

Using my pixie2 as a frequency spotter, I have verified
correct frequency readings on all bands but it is the only
thing I pick up on 21.120 MHz (3rd Harmonic of 7.040 xtal)
from my pixie2.

I have replaced the antenna connector (RCA) with a high
quality RF-type BNC. The old connector was intermittent.
Reception has improved slightly on all band, with an increase
in noise the only observation on 15 Meters.

I have a good compilation of articles regarding the HW-8 describ-
ing a sensitivity weakness at 15 Meters, but this is ridicul-
ous! It's gotta be better than this! I'm going to run thru
the unit with a commercial rf detecting probe tonight. (The
first 2 alignments I used a basic detecting diode as described
with the manual.)

I appreciate any help given.
TIA
-Ed Loranger

:I would like to find out any data on a B&W 852. It is a tapped inductor
:for a Pi Network, Looks like 5KV or better. Would like to know the
:rating and the inductance at the taps. This unit has a built in rotary
:switch to change taps. Thanks for the help N1DVE, Jacqui

These are really nice units. They could easily run at 5kW. I think B&W is extremely conservative in their power ratings.

I ordered mine for an 8877 linear back in 87. Took them a few months to deliver, mainly because unit was at plating shop for so long. But was worth wait. Think I paid about $120 for it back then.

They also sent along extra switch hardware and contacts. A real class act.

But, don't do what I first did before I decided on B&W: I bought one of those silver plated roller inductors using spiraling rectangular conductors. Insulation was lucite or plexiglas. On 10m the insulators started to bubble and explode like fire crackers. It might work for antenna tuners, but not in amp tanks.

Rob.

Radio shack has 3 units ranginf in price from $99 to $179. The model I
have can transmit about a mile in a typical city environment.

Midland has a model out around $150. Same range, with CTCSS tones to
secure the channel, plus all 14 channel coverage.

Motorola has about 4 models out now, priced about low to mid $100s.
Various features.

You could check into business VHF handhelds. May even be lower in price.

Hi Scott!

5C ICOMs have additional circuitry to do temperature compensation and hold the TX and RX within 5 ppm.
A single 5C can do the comp for up to 15 EC RX and TX ICOMs (which lack that capability...). Also,
there's a third type of ICOM, the 2C. It has the ability to do 2 ppm, but only for itself. It can't do the comp
for full banks of RX and TX ICOMs like a 5C can. You should have at least one 5C in the radio.

I'm getting a couple VHF Mastr II radios running on 145.790/simplex for APRS. What are you up to?
There's a couple of web pages that have some mods you may want to know about...

///PAY TV DECODER PLANS///

MATERIALS REQUIRED:

1 - Radio Shack mini-box (#270-235)
1 - 1/4 watt resistor, 2.2k-2.4k ohm
(RS #271-1325)
1 - 75pf-100pf variable capacitor
(Hard to find)
2 - F61a chassis-type coaxial
connectors (RS #278-212)
12" - No. 12 solid copper wire
12" - RG59 coaxial cable

///INSTRUCTIONS///

1. Bare a length of No. 12 gauge solid copper wire and twist around a 3/8" nail or rod to form a coil of 9 turns. Elongate coil to a length of 1 1/2" inches and form right angle bends on each end.

2. Solder the varible capacitor to the coil. It doesn't matter where you solder it, it still does the same job. The best place for it is in the center with the adjustment screw facing upward

Note: When it comes time to place coil in box, the coil must be insulated from grounding. This can be done by crazy-glueing a piece of rubber to the bottom of the box, and securing the coil to it.

3. Tap coil at points 2 1/2 turns from ends of coil and solder to coaxial chassis connectors, bringing tap leads through holes in chassis box. Use as little wire as possible.

4. Solder resistor to center of coil and ground other end of resistor to chassis box, using solder lug and small screw.

5. Drill a 1/2" diameter hold in mini-box cover to permit adjustment of the variable capacitor from the outside. Inspect the device for defects in workmanship and place cover on mini-box. Tighten securely.

6. Place device in line with existing cable on either side of the coverter box and connect to television set with the short piece of RG59 coaxial cable. Set television set to HBO channel.

7. Using a plastic screwdriver (non-matalic) adjust the varible capacitor until picture tunes in. Sit back, relax, and enjoy!!!

2. Solder the varible capacitor to the coil. It doesn't matter where you solder it, it still does the same job. The best place for it is in the center with the adjustment screw facing upward

Note: When it comes time to place coil in box, the coil must be insulated from grounding. This can be done by crazy-glueing a piece of rubber to the bottom of the box, and securing the coil to it.

3. Tap coil at points 2 1/2 turns from ends of coil and solder to coaxial chassis connectors, bringing tap leads through holes in chassis box. Use as little wire as possible.

4. Solder resistor to center of coil and ground other end of resistor to chassis box, using solder lug and small screw.

5. Drill a 1/2" diameter hold in mini-box cover to permit adjustment of the variable capacitor from the outside. Inspect the device for defects in workmanship and place cover on mini-box. Tighten securely.

6. Place device in line with existing cable on either side of the coverter box and connect to television set with the short piece of RG59 coaxial cable. Set television set to HBO channel.

7. Using a plastic screwdriver (non-matalic) adjust the varible capacitor until picture tunes in. Sit back, relax, and enjoy!!!

1728. Re: HTX 204 - what's this about a recall???

I talked to a RS salesperson, and he sort of played dumb. He said he bought one before to recall and said it might pick up some out of band, but I think they pulled it because of the TX mod.

Oh well, I'm sure the people that mess around trying to find all these mods will find another one.

I Know I've seen it before BUT !
Im new, and am considering ONE of the following radios.
Yeasu FT-1000D
Icom IC-775DSP
Kenwood TS-870S
Or Maybe The Yeasu FT-1000MP
I was almost ready to place an order for the Icom when the
salesman told me that that model has had problems with the tuning dials
freezin up and not moving.
Would everyone (ANYONE?) please let me know which rig has the FEWEST
problems with the best reception. User Friendly ? any and all comments
will be greatly appreciated.
Thankx
John H
ps the NEW Icom 706 model 2 looks promising also. Anyone know anything
bout it ?

1739. FS: GE Mastr UHF HT's

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-22 00:00:00 UTC
From: Jim Shorney <jshorn@binary.net>
Message-ID: <335D950C.49B0@binary.net>
Source record: 177149
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have two GE Mastr high-power UHF hand held transcievers, each with rapid charger and one good battery. Each unit has PIPO DTMF pad attatched, and they are crystalled for r462.950/t467.950 and r462.975/t467.975 (both units have both channels). One unit has a Channel Guard (CTCSS) module with 156.7 and 179.9 filters, the other has a T99 (pager) module with 712.5 and 772.5 filters. Both units work and both are in reasonably good confition, considering how old they are.

I would like to trade for some kind of hand-held that is usable on 440 MHz, preferably an HTX-404 (we can deal...), but age and appearance are unimportant as long as it works.

>please mail to my e-mail address.

The *RF* modem is the radio. You will need a *transverter* to convert
its 29 MHz output to the UHF band of your choice. We use the Microwave
Modules MMT432S around here to put it on 70cm. Down East Microwave
also makes a line of transverters which work well with the modem. SSB
Electronics transverters also work, but you'll need to modify them
slightly to split the IF Tx and Rx ports.

> Black Diamond, Washington KD7MK

Just a quick note on this subject: I was on our local rescue squad for
a long time;
and the rule that was passed to us was that NO MODIFIED GEAR was to be
used to transmission
on the Fire/Rescue/Police frequencies. If someone was caught using this
gear, it would be
confiscated and the person could possible be suspended.

The reasons given for this was that there was a lot of interference,
crossbanding, and
plain-old messed up radios that would interfere with operations. Not to
mention splatter and
wide-banding.

While I did not personally agree with the restriction, I did abide by
it; and can see the
reasons for it. I might also note that in all of the locations I have
lived since that time, I
usually have some type of contact with the local fire/rescue personnel,
and I always find some
type of similar policy. If this is due to an FCC reg, I do not know
what it is.

Thanks!

>
> How well do they work? Any users have comments?

I talked from PA to a ham in FL who was using the AEA in a closet of his
condo. Also talked to the friend in midwest who
skeds regularly with him. This was on 20 SSB. I couldn't
believe how well he was getting out.

Why would his shack not be full of RF?

At my end was 2 KW into a 4-el. monobander at 60 feet. I'm sure
the beam at my end helped, but I would never have guessed what
he was using.

However, someone on the net the other day commented on some
problems, but I don't recall them.

As per the mobile antenna discussion, bigger is better.

I've had an LK500NTC since 1987. Been a great AMP. The Peter DAHL
xformer and heavy duty power supply make it a real work horse. I've
put many hours on it in several different modes and have had little
trouble. Don't know if the ZB has the ALO feature but I know that
feature has saved my AMP a couple of times. You can still get parts
and/or service on them from Omega Electronics in N.C. also.

Have fun with it.

Hi All!
I have for SALE:
Brand new Speaker microphones in the boxes by motorola, the numbers are,
(5)ea. KIT # NMN-6129B With the optional UHF antenna.
(1)ea. KIT # NMN-6128C, this type has no antenna provision but with coiled cable.
These items are $70-ea. Shipped CONUS
Thanks es 73.....RICH RLUCCH2098@AOL.COM

>on this by one of the other users, the ARRL mentioned the GAP antenna
>claims (you don't need radials, (unless you want the antenna to work))!
>
>Yikes!

The DSP not audio, It is IF, as the DSP processing is done BEFORE
Baseband audio is detected> Where the ACG point is does not have a
thing to do if the DSP is AF or IF. Have a look at the radios block
and schematic diagrams for the 756 you will SURELY see that DSP is
before baseband audio. In learning radio, the IF generally was
before baseband audio unless superhets have changed over the years
greatly.
By the way The DSP is at 15 Khz, Yaesu's DSP is at 10.5 Khz and
Kenwood's DSP is at 11 Khz. ICOM samples at 62.5 kHz which is faster
than the other two manufacters.

I do not understand what a GAP antenna has to do with DSP and if it is
IF DSP or not.

Have a look in the radio instruction manual for the noise blanker and
see just what type of noise ICOM says it will work on, it mentions
pulse type noise, nothing more or less.

1764. FS BATTERY BACK-UP SYSTEM

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-22 00:00:00 UTC
From: TGHN73A@prodigy.com
Message-ID: <5jhfff$2dus@newssvr01-int.news.prodigy.com>
Source record: 177298

For Sale:
Tripp Lite Battery Back-up System, model SB-2000

Consists of a single cabinet containing a 2000 watt square-wave inverter, 8 ampere regulated battery charger, a "brown-out" line sensing transfer switch and an ISOBAR spike and noise suppression circuit.

Selling for $299 or B/O. Reply to: tghn73a@prodigy.com

The Tripp Lite SB-2000 battery back-up system protests line operated sensitive equipment from:

1. Potentially dangerous voltage spikes, noise and rdio frequency interference (RFI) coming in on the commercial power line.

2. Equipment interaction caused by power line noise going from one piece of equipment to another.

3. Low line voltage (brown-out) and total line power failure by providing virtually instant emergency power to preserve your data or process until orderly sutdown can take place.

Emergency power comes from rechargable batteries. This 24 volt DC power is converted to 120 volt AC power by a solid state inverter. This battery derived power substitutes for lost line power within 10 milliseconds of the line power loss.

Status lights: LINE POWER and BATTERY POWER indicate which mode the unit is operating in.

1765. Re: Out of Band XMIT Antennas (HT'S)

>The reason I am asking is because I know many public servants that
>might be able to use these as backup radios. Maybe they are there but
>I just never notice. Just a question. NIck

Since they are not type accepted for use in the public service bands, the
legality of using them as backup up radios is in serious doubt.

From: Charlie Hicks <chicks@ix.netcom.com>
Message-ID: <335C4D06.1D38@ix.netcom.com>
Source record: 177301

I purchased a apparent "new" version of the FT-50R (w/FTT-12 keypad). I performed the CAP/MARS mod (works) and the wideband recv mod using the pull-the-plug method with the ADMS-1C write method.

I cannot get the radio to fully open up for recv.

Does anyone know the procedure (if it exists) for the newer versions or has anyone successfully opened the newer versions up for full recv (76-999 Mhz)?

Is the freeband mod required for full recv range?

Thanks..
Charlie

I have the FT-8000R and I have a similar problem on the 144 mhz side...

For some reason, even with the squelch turned all the way up I'm still
getting backgroud noise, along with the blanking green LED. I tried the
S-Meter squelch but it only made it worse. I tried the cpu reset but
nothing seems to work! Very annoying because I can't
use my Search function anymore!!! (not to mention the constant backgroud
noise!!!) does any other ft-8000r doing this? any ideas?

thanks,

ken kc7put

>
>Wondering if any one has experienced an identical problem with their
>micor repeaters? Any help, at all, would be appreciated. 73 Murray. My
>email is mgreen@erols.com
>

I listened to the repeater last night. I would bet that the problem
is either a spurious or parasitic that just happens to fall on the
RX frequency as the TX is unkeyed. Since the problem seems to be
intermittent, that points to it even more. I don't think that rain
is the key, its probably more like temperature. If the problem is
parasitic, somewhere in the PA there is a self-oscillation that varys
with temperature.

I listened with my service monitor in the AM mode and heard some
abnormal AM component on the TX signal. You can do the same by using
an all-mode transceiver. Put it in SSB mode to generate a beat note
and see if the freqncy wanders. It's best to put a directional
coupler in the RX line off the duplexer to use it (the duplexer) to
trap out the fundamental TX. Tune the all-mode RX to the repeater
RX -- better yet if you have a spectrum analyzer, put that in the
RX line and look for any spurious around the repeater input.

Back to the problem. If the repeater TX generates a spur that crosses
the RX frequency as its unkeyed, the repeater will key up again, etc.

Look for a bad ground in or around the PA board, or possibly a bad
bypass cap around the PA assembly.

Message-ID: <19970422135801.JAA07801@ladder01.news.aol.com>
Source record: 177310

Hi Al--

Starting in May, sporadic E openings will permit 1000-mile+ contacts on an intermittent basis. These openings may be to one specific area or more general--depending upon conditions. "Double-hop" sporadic-E contacts may go from coast to coast or to Europe for east-coast stations. Sporadic E generally winds down by mid-August. Openings tend to occur mid-morning and in the evening--and may last from a few minutes up to several hours.

The best mode is SSB (or CW). FM skip is also workable, but other stations may "outcapture" the one you're talking to mid-QSO. 40-Watts is more than adequate for power, but you'll benefit greatly from using a small beam (3-elements is fine). The cheapest equipment options are probably the Ten-Tec 20-to-6 Meter transverter kit ($99) and the MFJ-9406 SSB transceiver (about $220 street price). Used equipment is also available. Avoid older tube type gear such as the Swan 250 or Heathkit units--unless you're into high maintenance.

I think six is a lot of fun. I've worked over 150 Grids--including several countries in Europe and Central America in two years--using only a MFJ-9406, a small chimney-mounted antenna, and a 150-Watt Mirage amplifier. Good luck.

Rick K1BQT

Hi Al:

When 6m is open, it's quite possible to work from the midwest to the East, Gulf, and West Coasts using less than 100w (at least on SSB). The popularity of the various modes varies from locale to locale, but I suspect that the inclusion of 6m in many of the newer rigs has really led to an upsurge in 6m SSB activity.

Antenna polarization is vertical for FM and horizontal for everything else, although it's a lot less critical during band openings. (Hell, I've worked Panama on 6m with 90w from an old Icom IC-551D to a Cushcraft R-7 HF [only] vertical!)

Yes, the full-featured newer rigs are expensive (why would anyone expect 6m to be different?) but I've worked people using the new MFJ rigs and low dipoles, and many experienced 6m ops consider the Ten-Tec 20m-to-6m transverter to be an incredibly cost-effective way to get on Six for those who already have HF rigs.

To anyone considering getting on 50 MHz, I strongly recommend buying a copy of "Six Meters: A Guide to the Magic Band" by Ken Neubeck, WB2AMU. It is IMHO the best currently available introduction to six meters and is particularly good for new-to-six ops. It's available from:

Worldradio Books
Box 189490
Sacramento, CA 95818

The price is $14 (that includes shipping). Calif. residents should include 93 cents extra for state sales tax.

Six is a fun band. Since returning to ham radio a few years ago after an absence of 20 years, it's become my favorite band.

73,

Rick WB9GYT

The following is a E-mail I sent to Ted Kaprika concerning his promotion of the Adolph Hitler Fan club page on this Ham Radio List.

I apologize for the length but given Mr. Kaprika's past record of half-quoting and taking out of context. I wanted all to see exactly what was said.

Dan, KB1BG

Dear Mr. Kaprika:

I have read your recent posting containing your reference to your Adolph Hitler Fan Club Page.

Rather than use words of anger, let me attempt to persuade you to rethink your position.

I work for the United States Holocaust Memorial Museum in Washington, DC. May I invite you to visit the Museum as my guest and let me show you first hand the results of the man you wish to glorify. I will introduce you to survivors of Auschwitz, Dachau, Berger-Belsen and let them tell you of the cold blooded murders of their mothers, fathers and other family members. I will be happy to show you geniune artifacts. The man you choose to glorify is directly responsible for the murder of over 6,000,000 human beings. 1,500,000 of these were children. Not all were Jewish. Many were Romas that your hero decided were inferior human beings and did not deserve to live.

You might find it interesting that the first religious leaders murdered were Catholic Priests in Poland. Then he ordered the murder of handicapped people- then children.

Please come visit and learn about the man you glorify.

Before you spew forth any anti-semitic diatribes, let me tell you I am not Jewish and have no axe to grind on religious grounds. I am a member of the human race like you and the 6 million your hero murdered.

One final note-I have given the name of your web page to our Internal Security unit. They will take a look at it and notify the FBI Anti-Terrorism unit who keep tabs on these kind of sites. This is required procedure when we discover a site like this.

Sincerely,

Daniel Stiles

>>Does anyone know WHY??

Yes. Ease of out-of-band transmitting, apparently, is what was published publicly. But there's gotta be a little more to it than that. We'll keep you posted.

can say how stable or accurate it is but in two different stores
I went to they had NO range at all,would not lock on the stores
cell phone inches away and the second time with an older cordless phone I
use with an on/off switch on it... same thing
its junkanese junk

1783. 10 meter conversion

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-23 00:00:00 UTC
From: Larin <larin@blueriver.net>
Message-ID: <335E93B3.26F@blueriver.net>
Source record: 177068

OK now.... I have a 10 meter rig that is really nothing more than a big 11 meter CB. It is a Ranger RCI 2980 base station. I want it to cover the 10 meter band -- the whole thing! All the way up to 29.700 because when I get my General ticket I want to be able to use it!

How is the best (right) way to modify this radio to the 10 meter band?

What if I wanted to go down to 12 meters?

Is there a way to make it cover 10 11 and 12? Probably not without retuning each time huh.

Well, someone let me know what they think. I am familiar with such kit as the Expander 120 and 160 and have used the 120 for a channel conversion on the Cobra 2000. What do you all think?

Larin

While you're counting things, count the number of postings to this thread and the number of newsgroups that are spammed. Which is the bigger bandwidth/time waster??? Sometimes the cure is worse than the disease...

Best thing you can do is to boycot the good deals that are posted here so that I can buy them :-).

Russ, one "trick" you might try is to put a DSP with pseudo COR output on the TS450 audio to simulate COR. JPS in Raleigh has such a mod for a little more than the price of their amateur product (high $300's) and you get DSP audio filtering as well.

You might also look at the Link Communications Controllers, They have TTL logic output on each radio port (one direction - to radio) to talk to the Kenwood directly without an interface.

Good luck, John

Let me cast a vote for the SGC-230 tuner (about $450 from HRO). I used it with my IC-706 during the Pacific Cup sailing race from San Francisco to Hawaii last year. Once installed, it's just about fire-and-forget; no need to push buttons to initiate tuning; and I didn't even bother to install a "TUNED" indicator -- just watched the SWR drop. It tuned my 23-foot marine whip on 160 to less than 2:1 SWR. (No assertions about the radiation efficiency of this configuration, though!)

It's well-built for the outdoor environment and works very well with the 706 in my experience. I chose it over the available Icom tuner at the time.

Regards,

Mark
K7MPH

Hi There

the most likely problem if you rig goes out of lock from 7.5mhz and up is the filter switching diodes on the rf board "there is a service bullitin about this" at kenwoods ftp site or in the vco on the rf board it could the a capacitor in there i had a problem simmilar to what you described and it turned out to be a 56pf cap located near T22 in the vco box on the rf board witch is the occilator for 7.5 - 14.5 mhz!! so it should be one of them two problems!!! i take it you have done the vco 5 mod on the pll board that also gives similar symptoms of pll unlock normaly over the full range of the transceiver!!!

good luck bill vk2eu

1811. ADVERTISE TO OVER 100 MILLION PEOPLE FOR FREE!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-23 00:00:00 UTC
From: nejeh@gdi.net
Message-ID: <5jmd2a$65g@news.gdi.net>
Source record: 177096

Please take the time out to read this email. it is worth your time.

ADVERTISE TO OVER 100 MILLION PEOPLE FOR FREE!!!
Or send a message to millions of people...

NOW YOU CAN ADVERTISE FREE AND GET DRAMATICALLY
MORE RESPONSES THAN ADVERTISING ON NATIONAL TELEVISION

With E-mail your potential customer is forced to read at least the
headline of your letter. Unlike TV, magazines, newspaper ads, and
direct mail where more than 99.99% of the recipients will skip right
over your advertisement.

TURNS YOUR COMPUTER INTO A CASH REGISTER: Conservative estimates indicate
well over 100 MILLION people will have E-mail accounts in the next year!
E-Mail Blaster turns your computer into a cash register by giving you FREE,
immediate access to all of them. Do you think some of the more than 100
million people with E-mail addresses would be interested in your products or
services? Even if you don't have your own products or services you can
still make money buy promoting our computer software!!!
You can make money with our new software called E-MAIL BLASTER

Here's how:
* By Using E-Mail To Sell Your Products & Services
* By Using E-Mail To Sell our Computer Software such as: Email Blaster, Web Walker,
Email Lock Box etc.
* By Renting or Selling Your E-mail Addresses
* By Becoming A Distributor for e-mail BLASTER

MUCH FASTER: With bulk E-mail you get responses back in 1 to 4
days instead of waiting weeks or months like with television or print
advertising. You can begin filling orders the same day you send E-mail.

FREE ADVERTISING WORTH MILLIONS: It costs millions of dollars to mail out
millions of letters using the United States Postal Service! Now you can
send your ad to MILLIONS of people for FREE using E-Mail BLASTER

E-MAIL BLASTER IS ACTUALLY 3 PROGRAMS IN 1: E-Mail Blaster is amazing new
technology and the most advanced bulk E-mail software on the market today.
(1) E-Mail BLASTER automatically extracts E-mail addresses from America
Online, CompuServe, Prodigy, and the other online services, the Internet,
web pages, news groups, and hundreds of other sources. (2) E-Mail BLASTER
automatically stores the E-mail addresses in your computer along with
keywords that describe hobbies and interests to created highly targeted
E-mail addresses. (3) E-Mail BLASTER sends your marketing letter or ad to
MILLIONS of targeted E-mail addresses at the push of a single button!

HOW DOES E-MAIL BLASTER WORK? E-Mail Blaster has dozens of special filters to automatically harvest E-mail addresses from major online services such as: America OnLine, Compuserve, Delphi, Genie, and of course the internet.

AOL AUTO EXTRACTOR: E-Mail Blaster has many special features like the AOL Auto Extractor that let's you use a regular dial-up Internet connection to collect names and addresses from America Online. Collect America Online addresses without being a member. Allows you to download names and addresses from America Online without paying membership fees or online charges. Auto Extractor for all of the online services and Special E-mail database search engines will also be available at no additional charge.

SIMPLE TO USE: E-Mail Blaster does all the work for you. Unlike other programs where you must cut & paste addresses, E-Mail Blaster does it for you automatically. And, unlike other E-mail programs, with E-Mail Blaster there is no need to purchase any additional software

SPEED: Your time is important. E-MAIL Blaster is DRAMATICALLY FASTER at extracting and sending E-mails than all the other programs on the market that we tested it against.

NO SPECIAL EQUIPMENT NEEDED: E-Mail Blaster runs on a PC with Windows 3.xx Windows 95, Windows NT, a 386 or faster processor, 4 MB RAM, and a hard drive with at least 10 MB free and your own SLIP or PPP connection. No other software needed. Also runs on a Macintosh with Soft Windows installed.

****
This message was sent using E-Mail Blaster.

E-Mail Blaster is The World's Leading Bulk E-mail software.
With E-Mail Blaster you can advertise to over 100 million people for FREE!

Cost: We are giving away Email Blaster your only cost is $165.00 License fee.

THAT'S IT!!!

Our company is in the software business of developing cutting edge products, so we know if you have the opportunity to use our software FREE you will be our future customers. We know we need you to make our software business a true success!

(Please if our lists are incorrect put "remove" in the subject and just hit "REPLY" and you will not be bothered again. Please forgive our mistake).

Message-ID: <335d7230.2487363@news.fastlink.com.au>
Source record: 177165

I suggest 10 since the less meters you have the less wiring is involved.
It might be better if you use 2 meters with switching to save front
panel space.

1821. Info Wanted Dentron DTR-2000L Amplifier

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-23 00:00:00 UTC
From: wb0nzv@aol.com
Message-ID: <19970423003600.UAA24030@ladder01.news.aol.com>
Source record: 177166

I recently aquired a DENTRON DTR-2000L Amp. I am told that there are a few mods you must do unless you want to be buying a new 8877 every six months. Something was said about exceeding grid current specs on hi power SSB operation due to the low plate voltage on the tube. Also the filaments are getting 6.5 volts from the transformer and should only have 5.00 volts which causes the filaments of the tube to vaporize or go open. Perhaps the need for step start in rush circuit. Any information, experiences good or bad, or anything you can tgell me that might be of some help, I would appreciate. 73 de Van, WB0NZV

1825. IC2350H vs. FT5100?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-23 00:00:00 UTC
From: jjhanso1@students.wisc.edu
Message-ID: <335d5b38.21952321@news.doit.wisc.edu>
Source record: 177170

My car got broken into and my old radio was stolen. So, now I am looking for a new one.

It looks like I can get an IC2350H or an FT5100 for about $400.00. Which should I buy?

Here is what I'd like:

Dual reception - one receiver on each band or both on the same band
Extended Rx - 144-160 MHz and 430-460 MHz
Mod for extended Tx - 144-160 MHz and 430-460 MHz
(ease of modification does count, I'm not an amateur with a soldering iron, but I'm no expert either...)
Large memory bank (preferably more than 70 memories)

Does anyone have any comments one way or another on these radios? If you had to choose, which way would you go?

Thanks,

N9LEA

1830. Re: TS450 IF232 Protocol?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-23 00:00:00 UTC
From: tenorman@i1.net
Message-ID: <5jk1np$f6g$1@news1.i1.net>
Source record: 177175
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

The Kenwood TS450 uses the RS-232 serial protocol. The signaling is TTL logic level, that must be converted to +/-12 volt to interface to the more popular "PC" type signaling standard. This can be accomplished by purchasing and interfacing a MAX-232 chip (TTL - RS232 level converter), and a TTL inverter. Get a spec / interfacing sheet on the MAX 232 chip, it will explain how to build a simple converter board. After that, the rig communicates at 4800 baud, Hardware flow control, 8 data bits, 2 stop bits, and no parity (if my memory serves me). After that, the commands to be sent and received should be found in the supplimental guide that comes with the TS-450. If you don't have that book, email me, and I'll send them to ya. Good luck, 73, Mike - WQ0N

From: John Roe <johnr@bicnet.net>
Message-ID: <01bc4f7b$b1990ae0$2924c6cf@jrr>
Source record: 177179

I first posted this on the 756 reflector group to see if any of those who professed that they wanted to get rid of their 756, would take me up on the deal. As you can see by this posting so far all those folks have decided to hang onto their 756's.

I am trying to sell my IC-736 so I can buy a 756, or I would be willing to trade it on a 756's. How about it any takers?

It is approximately two years old and in excellant condition.

Some of it's features include:

All band (160 - 6 Meters), All Mode (SSB, CW, AM, FM).
General Coverage Receiver (500kHz - 29.995 MHz)
Built in Automatic Antenna Tuner
Includes 110 VAC power supply.
Automatic selection of 2 Antenna Inputs
100 Watts on all Bands at 100% Duty Cycle
101 Memories plus up to 10 memo pad memories
Includes hand microphone
have original box and manual

Reason for selling, Want new Icom 756.

Will Ship Fedex 2nd day.

Asking $1,300.00 dollars.

If interested please respond to KE1CQ@bicnet.net

Thanks & 73's John KE1CQ Harvard, MA

Kenwood TS 680S HF with 6 meters.
-100 watts on all bands, 20 watts on 6 meters, all mode.
- Narrow CW filter
- SP 430 matching external speaker
- Orig. box, manual, and service manual.
$850.00 including shipping continental U.S.

The only reason for selling is that I work full time and will be attending Grad. school part time and simply will not have time to operate.

Actually Marty, it sounds more like your ISP falls for every bogus news-
group that's created outside of the recognized and accepted procedure.
There was no Call For Discussion, nor was there a Call For Votes, and
there was no posting of any r.r.a.swap charter. Thus, it's bogus and
will eventually be cancelled.

(Are you sure it's not under the alt hierarchy?)

I've found this trick very useful. Look inside any radioshack device (2 meteramp Transeiver etc) if you find a part that matchs your needs call RSparts at 1-800-the-shack. Tell them you need that part! Inside the little 2 meter amp are 3 variablecap. I know 1 of them is a 10-50 pf unit. It'll set you back a cool $1.99....Good luck!

You need the HW-8 Handbook, it has all kinds of mods and fixes for the HW-8. You can get one from Mike Bryce WB8VGE 2225 Mayflower NW, Massillon, OH 44647. The cost is $11 which includes shipping.

I have a HW-8 and it has the same problems as yours. The cure is to rewind the coils for those bands along with changing some cap values.

Good luck

Bob

Should be unfavorable, but the spell checker did not know that's what I
meant when I typed it.

> ... but I used an Icom
> 736 with an Icom autotuner (I believe it was an "AT-2") on the
> boat to tune the backstay ...

A few have mention this tuner, I think it's now model AH-2A or B. I
bears looking into. Unfortunately, there are no specs (space is at a
premium) I did see some picture and it looks fairly compact

The connections sound straightforward. Both the tuner and the RF section
will be mounted in the truck, so the ground connections will be very
short and there are places aplenty to find suitable grounds
>
> Carl - wa6vse
> carl@ais.net

So far the vote is 4 for the Icom tuner 2 for the SGC tuner.

Thanks for the input. :)

To: Retail, wholsale, OEM, and industrial customers
From: Connectors Unlimted - Sales Dept.
Date: April 01, 1997

Effective immediately, Connectors Unlimited has terminated all small dollar retail sales. We will continue to supply "Name Brand" products to our wholsale, OEM, and industrial customers who meet the minimum order requirements.

Our "Generic" connector line has been discontinued. Inventory will not be replaced. Most connectors and adaptors are available in one or more of our "Name Brand" lines. These lines are simply higher grade, better quality and manufactured to more stringent specification. Prices are, on average, 60% - 100% higher than our Generic line.

Existing inventory of products in our "Generic" line will be sold by lot with a minimum order of $250.00 or the entire line item. A complete listing of this inventory will soon be available by e:mail and on our Webb site. Any one interested may send a message to:

sales@connect.mv.com

with a subject of "Generic Inventory"

You will be added to a distribution list. Information will be distributed as available.

I have never seen a schematic of the 660 but the parts count looks very similar to the PEP converter kit available from HI-RES Communications for $19.95 US. There are few reasonable ways to design this simple circuit. The HI-RES kit works very well on any wattmeter. The address for HI-RES is 8232 Woodview, Clarkston, MI 48348-4058. Phone # is 810-391-6660. They also have Collins repair and maintenence video tapes.

From: Kenneth M Gianino <ken@notify1.com>
Message-ID: <335E02AB.332A@notify1.com>
Source record: 177199

For sale: Yaesu FT-10R 2-meter handheld radio. This is the
FT-10/40-A16 version (2.5 Watt battery, 30 channels, DTMF, PL encode).
Modified to transmit and receive from 140 to 174MHz. The FT-10 has some
notable features not included on the dual-band FT-50:

-Memories can be managed in groups of 10 channels.
-True "prioroty" channel while scanning other memories.
-1/2 sec. "Turn-on" delay prevents accidental battery drain.
-Menu has "half deviation" mode for narrowband repeaters.

Purchased new in October of '96. Price: $195.00 plus shipping.

> L2
> L1,
>
> and the same corresponding settings for UHF

I screwed up the THSQ, TISQ, S1LV, and S9LV values on the VHF side of my radio because I foolishly thought that I could set them in the "usual" manner, i.e. by selecting the option and turning the knob. With lots of frustration, I have managed to get them to usable values but I'm sure that they are not yet "correct". Unlike the other variables that are set normally (and probably HSSQ, but I didn't change that one from zero), you FIRST provide an input signal of the correct strength, and THEN pick the option to have the radio pick whatever numeric value that signal produces. Twirling the knob does nothing. Since I didn't have an RF Signal Generator with variable output available, I had to scan the 2M band with the radio in normal operation mode until I found "weak" and "strong" signals, quickly return the radio to the setup mode, and hope that the QSO's were still underway so I could grab the signal at that moment as the value for the option. It's a real pain, because you can't change the frequency while in setup mode without cancelling setup mode. Grrrrrrr!

I also don't know the "default" values of the 8 power settings, mainly because they were set wrong at the factory. I got out my Power/SWR meter and adjusted them all so that I was actually putting out the power as specified in the manual (5, 2.5, 1, 0.1 watts).

Since no one seems to have volunteered any "default" values yet, I'll post what I have currently, and I'll be interested to see if someone else posts the "correct" factory values for the 4 that I screwed up, although I'm not so sure I want to try to change them again. Maybe

I'll have to resort to sending the radio in for service...

SETTING	VHF VALUE	UHF VALUE
HSSQ	0	0
THSQ	123*	113
TISQ	126*	70
S1LV	42*	107
S9LV	196*	199
HIPO	255**	255**
L3PO	105**	100**
L2PO	80**	70**
L1PO	35**	32**

*These readings are almost CERTAINLY wrong! See the note above.

**These readings are NOT factory settings, but they are CORRECT FOR MY RADIO -- I set them with an RF Wattmeter. The factory settings were ALL too low to give the rated output power.

By the way, in case it matters, my (unmodified) radio comes up in setup mode with BAND A2C, not BAND A2 or A3...

1857. IC765 For Sale

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-23 00:00:00 UTC
From: Larry Menzel <lmenzel@millcomm.com>

I have a very clean, virtually mint IC765 for sale. Standard features including 500hz CW filter. PBT mod installed. Mid 3000 serial number.

This is a wonderful radio. Built in keyer and power supply, extremely fast built-in tuner for 10-160, and still a choice for serious contesters and DXers around the world.

The IC765 is still rated among the finest receivers of all radios over the past 10 years, including the latest and greatest from Kenwood, Yaesu AND Icom. I'll send you a copy of the comparisons from the ARRL Lab to show it.

Truth in Advertising: There are two small marrs (not scratches) in the paint on the top, left rear corner of the radio. They were there when I got it, and are not very noticable...that's why I say "virtually mint". The face plate and other feature are perfect. Non-smoker radio, too.

$1500 firm. Shipping and insurance from Minneapolis to CONUS will run about $50 (if it's more than that, I'll pay it). I'll make sure it's packaged right.

Email direct please. I'll provide my phone number if you want to talk about it.

Message-ID: <msolomon-2304971124420001@moise.mitre.org>
Source record: 177206

A friend of mine wants to sell me his used Alinc DJ-160 and being new to the hobby, I have a couple of questions I hope someone can help me with. First, if the radio is left off for more than an hour or so, it locks up (blank readout) and has to be reset which causes it to loose memories, etc. Is there an internal battery or capacitor that saves the memories? Any other suggestions as to possible fixes?

Also, what is this radio worth in perfect condition?

Thanks,
Moise Solomon

Hi guys......
I'm looking to trade a good working 1GB 3.5" IDE hard drive for a Drake
MN-4 anteena tuner or an MFJ-949E or MFJ-941E tuner.
Call (606)238-0029 days or (502)863-0500 nights and ask for Mark.
Thanks..........KB4AEP

Brand new (never powered on) This is the model that does not need a dualband radio to operate, 300.00 shipped lower 48.

1865. FT-50R DC power input jack

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-23 00:00:00 UTC
From: n9kqk@hsonline.net
Message-ID: <335e205b.0@news.hsonline.net>
Source record: 177210

Does anyone have a part number for the DC input plug for the FT-50R ht? A friend got one without the cord or recharger, all my adapters seem to be too big. Is there an aftermarket replacement or one at the local RShack?

Thanks in advance

Scott - N9KQK

I own a small Audio business that I'm selling out of so I
decided to set up a web site dedicated to trying to sell
my equipment as well as some person electronic items as well.

A quick listing of what I'm selling:

-Mackie CR-1604 Mixer -Peavey PV-8.5c Amplifier
-Ross Typhoon Loudspeakers -XLR Drop Snakes
-Mic Stands -Generic Microphones
-Adapteres/Transformers -Microcassette Recorder
-Sony TR-600 Camcorder -Canon AE-1 35mm Camera
-Archer Video Processor -Epson Stylus Color II Printer
-Radio Shack CT-1055 Bag Phone -Powerhouse X-10 Computer Interface
-M.Y.O.B. Accounting Software -Brand New Cell Phone Battery for Nokia 232
-1963 ARRL Handbook -More...

Please visit my web site at: http://mypage.ihost.com/unitedsound
for complete details and asking prices on any of the items listed
above including specifications and features. Or e-mail me at srwhite@ibm.net

Thanks,
Steve White - N2RWE

: Huh??? I used to get a lot of mouse droppings, urine corrosion, etc.,
: in equipment UNTIL I got my cat. No problem with mice OR the cat.

: Don K6LTS
: donrm@sr.hp.com

Please, if you do allow your kitty to peruse around the stuff
as I do (they're my friends) be sure they cant get into the
HV. I have a friend in Aptos, Ca. that was on the radio running
a homebrew linear amplifier in a rack. Mr. Kitty was poking
around and contacted the B+ somewhere and got fried. It was
very sad losing his friend that way.

And all you cat-hating flamers out there who are going to
say it got what it deserved...well, all I can say is cats
and ham shacks have been around together for a long time

I have a picture of operator 9CU dated 1913 when he was 12
years old pounding brass on his spark-gap transmitter in
his garage in Chicago with his old trusted friend Mr. Tabby
curled up and purring on the desk next to the key.

I've never met a cat I didnt like :-)

1871. RS Dual Bander

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-23 00:00:00 UTC
From: "Kevin S." <khs01@gnofn.org>
Message-ID: <Pine.GSO.3.95.970423144645.18034F-100000@sparkie.gnofn.org>
Source record: 177216

After speaking with the RS communications buyer, he said that ADI was not supposed to make the RS radios able to be modified for certain TX ranges. Well, it was able to. Therefore, they were pulled and sent back to ADI. They will keep the radios, and as of this moment, no replacement is on its way. RS doesnt want any new radios from ADI. He said he is very interested in getting a dual bander, but many companies (alinco, icom, etc) dont seem to want to give them a good price. Oh well....

1874. Questions on QRP

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-24 00:00:00 UTC
From: mcdonld@ix.netcom.STOPSPAMMING
Message-ID: <MPG.dc9ea8c70529f98968f@nntp.ix.netcom.com>
Source record: 176969

I am looking into putting together a QRP setup to operate CW via a battery-powered portable on hilltops in my area.

Are there any good books or other writeups on QRP?

What are good keyer paddles that are more rugged in terms of dust tolerance and getting moved around?

I am leaning toward setting up for 40 meters if I get a single-band rig. Are there other bands (like the WARC bands) that are better for QRP than 40m?

All I have done so far is read the relatively recent reviews of QRP CW transceivers in QST and look at the web page for the Northern California QRP Club (whose meetings are a bit too far away from me); I am leaning toward the Wilderness Radio equipment because of good reviews, also the company is located closest to my home of any of those listed (for easier tech support), also I wanted a kit since I am not an EE and can't design my own but I like to further my knowledge and construction skills and have previously built an audio amp and preamp from kits. What experience do others have with kit QRP rigs?

I will probably string up a dipole antenna; are there other antennas others have found useful?

Well folks, bad finances have forced me to close this account.

Boy I bet Larry will just love that news. He'll have to go back to Fidonet, the free international network, to harrass me now. Which reminds me... Larry are you sure your REAL name isn't Steve Winter? If not your personality could be a dead ringer for his! ANYONE who has spent more than a year on FidoNet knows who Steve Winter is and if they ever get in Larry's sights, they'll know exactly why I made such an association!

I've given my html files to my cousin,(who is a new ham and who has just signed up on this system), until he can make his own so at least the good collection of links will survive me. But I must warn idiots like Larry that he is even more hard nosed conservative than I am albeit he's a lot more skilled at eloquently articulating his points, being a campaigner for Alan Keyes, I guess he has to be. I figured it was only fair to give them to him since he basicly wrote my whole webpage for me since I am not very skilled in html coding.

So 73's to you guys & catch you on FidoNet if you use it, or on 10 Meters!

Ted (ted@caprica.com)

PS to Larry: Bite me you socialist moron!

1887. Looking for WB3JBG, KA5JVU, and KC5NG QSL cards

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-24 00:00:00 UTC
From: k5dh@qsl.net
Message-ID: <5jnl3v$m5i@sf18.dseg.ti.com>
Source record: 177019
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

This is way off-topic, and I'm sorry for that, but here goes...

I'm looking for examples of my old QSL cards. Like a dummy, over the years I did not save examples of most of my cards. I want to put up a framed display of one of each of my cards in my hamshack, but I do not have them all. Actually, I can't even remember what some of them looked like.

I do NOT need these:
- WB3JBG card with tower/beam on front (my first QSL from 1977)
- KC5NG card with farm/barn/horses on front

I know one card was a promo from RCA, with a painting on the front side that depicted some sort of communications satellite, and my call would have been hand-written along the right-hand side of the front of the card. I only ever had 100 of these, so this one may be hard to locate.

I also used some temporary U-fill-in cards when I first moved from Delaware to Texas. These will also be very hard to find.

All of the other cards were bought from regular QSL vendors.

If you have one of my old cards that you'd be willing to part with, and the front side is in mint or near-mint condition, please email me and I'll make arrangements to get the card(s) from you.

Thanks very much and 73!

Hello All .!!!

I have recently purchased a Palomar Tx-150 Solid State Amp. It was manufactured by Palomar Electronics - I think . I am looking for a schematic and/or specs on the amp.

Thanks in advance,

WA8DXK --- Russ

Note that is 5 to 10 nf "nanofarads" not pf "picofarads". That's 5,000 to
10,000 pf,
where common trimmers are 5 to 100pf. A 2-meter rig is unlikely to have a
5,000pf
trimmer. I misread this too the first time.

Hi James -- You can organize a local Ham Auction at ur Hi School parking
Lot on a weekend. Take 10% of the sales. Advertise your swap meet in
local club news letters and the repeaters. Have the crew make cookies
and lemonade at a dime a piece. Whatta you think???

1893. Blown UHF Amplifier Brick

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-24 00:00:00 UTC
From: cstampf@health.co.dutchess.ny.US
Message-ID: <199704241413.AB29425@gate.hin.state.ny.us>
Source record: 177025

Does anyone know where I can get a UHF amplifier module for my
Kenwood TM4100 dual band radio, rather than the manufacturer?

This is a good dual-bander that is left crippled without the UHF
portion. Service facilities can repair it but the cost seems to be
prohibitive. I know that I can save a few bucks by installing the
module myself, if I can find one.

Thanks

Jeff's right (for once), rec.radio.amateur.swap is a bogus group. And any and all rec.ham-radio.* groups are bogus as well. They were replaced by the rec.radio.amateur.* groups in the grand renaming. And there is no rec.radio.amateur.packet group either. I've seen that as a bogus group on some ISP servers, but it, like the rec.radio.amateur.swap group, is the result of some sysop doing an illegitimate group creation. All Big Eight hierarchies have an established process for creating groups. None of these bogus groups have passed through that process. But if someone wants to do it legitimately, I'd vote for the creation of an amateur swap group, and for a packet group under the digital hierarchy too.

Help IC706 CW-R mode adjustment
****

I have some trouble (CW-R mode only) with my IC706.

With the CW (not -R) mode, I can listen very well LSB stations.

But with the CW-R mode, I listen USB stations very badly and very weak :
The audiofrequency is very deep. If I try to listen a clear carrier, I
get 2 listening frequencies.

So, my CW-R mode seems to be out of adjustment.

Can anyone give me the component I have to adjust ?
And where is it on the board ? (Which board ?)
I do not have the technical manual.

Thanks a lot

I just bought an ic2000 2m and the manual sucks or the radio isn't working right...??? Two of us sat for 1.5 hrs trying to set in freq's and no joy...

is there anyone who can give me a quick what to do on this thing for programming in freq's?

I went into vfo mode (I think) and set the freq, hit the pgs button till it beeps one short/one long and 3 shorts and it doesn't put in the freq.

I tried just till the right hand bottom was blinking and it looked like something was going to happen but it wasn't programmed..why so complicated?

maybe it's n ot working correctly, it was the floor model from HRO in Salem

I've never seen compression trimmers as big as 10,000 pF, which is of course not to say they're not available. 10,000 pF has a reactance of about 0.1 ohms at 2 meters, so it's unlikely to be found in such equipment.

Doug,

I was incorrect about the voltage for the BP-160 battery.

The BP-160 is a 7.2 volt 700 mAh battery so getting 8 volts out of it
is about correct considering a " surface charge " condition after the
charging period..

In article <335E1E82.5246@cct.infi.net>, rettig@cct.infi.net says...
>
>I'm thinking about buying one. Any comments on quality/value/performance?
>

If you want the TT-1220 for the experience and joy of building a rig, then go for it. It's a pleasure to build. The PC board is extremely good quality, solder-tinned, plated-through holes, silk-screened, etc. The manual is quite thorough and well-written. All of the parts were there except one common 1/4 Watt resistor which I had on hand anyway. The step-by-step building process is a really good idea. If you're into packet, there's a TNC outlet on the back panel (5-pin DIN jack).

However...

If you want a rig to actually use, buy a second-hand Japanese rig for the same money and actually get features and power output that mean something. The TT-1220 is a reasonably good performer, but it lacks some very basic functions that even 2m radios from the 1980s had, such as S/RF metering, a DTMF mic, scanning, high power output (max output on the TT-1220 WITH the optional PA module is 30 Watts), etc. The LED display is useless in sunlight, so forget mobile operation.

The bottom line is...

By the time you spend the money for the TT-1220 and the optional PA module, and locate a DTMF mic somewhere, you will have spent more than the cost of a brand-new Kenwood TM-261A or similar new rig!

You have to ask yourself why you want the rig, and go from there...

This is way off-topic, and I'm sorry for that, but here goes...

I'm looking for examples of my old QSL cards. Like a dummy, over the years I did not save examples of most of my cards. I want to put up a framed display of one of each of my cards in my hamshack, but I do not have them all. Actually, I can't even remember what some of them looked like.

I do NOT need these:
- WB3JBG card with tower/beam on front (my first QSL from 1977)
- KC5NG card that was a promo from RCA with satellite on front
- KC5NG card with farm/barn/horses on front

I also used some temporary U-fill-in cards when I first moved from Delaware to Texas. These will also be very hard to find.

All of the other cards were bought from regular QSL vendors.

If you have one of my old cards that you'd be willing to part with, and the front side is in mint or near-mint condition, please email me and I'll make arrangements to get the card(s) from you.

Thanks very much and 73!

Source record: 177050

Me too! Me too! Please send me all your unneeded ham gear! I know I could get a job and raise the money. Or, have a bake sale, car wash, check with senior centers for odd jobs that local seniors need done, work for my folks, family, or Mc Donalds, But I want to take the more honarable road. The road that will build charactor. I want to take, what has become the American way, and ask someone else to give me something for free.

This will help me appreciate the gear much more, knowing that someone actually had to work to earn the equipment, and was kind enough to, instead of sell it themself, pass on to their family members, or selfishly keep it, and pass it on to me.

If I can continue this noble path, I one day hope to work with the government. I will do what I can to keep people working by participating in the wealth distribution system or current tax and welfare system, by allowing you to send me more free things in the form of public welfare.

After all, if their were no welfare recipients, what would all the social workers do? Yeah..., Yeah.., That's what I'll do. Please e-mail me for an address to send send me your gear. Please keep in mind that you need to include postage as well. You will feel soooooo good for this. Trust me.

(Now remove tongue from cheek :))

I have a very clean, almost mint IC765 for sale. Mid 3000 Serial number.

Small mar, not a scratch on the right rear top. Beautiful radio. ONe of the best receivers of the last 10 years. Great contest rig.

$1500 firm. Shipping to CONUS from Minnesota about $50. If it's more than that I'll pay it...I'll make sure it's packed right.

Email me and we can talk on the phone about it.

Larry N0XB
Northfield, MN

Yes sir.. the 21-1808 goes for about $130 and a just released model...
sorry... can't find the flyer costs $99. The $99 model looks like a
single channel unit with no CTCSS. I have the 21-1808.. (FRS-108) it has
14 channels, with scan function No CTCSS.

If it's about nine feet tall and has a small x on the top it's a
astro plane. That antenna is just a fair antenna, but a good
antenna considering that its only nine foot tall.

For sale a Waterman's pocket scope model S-11-A. This is a fifties
oscilloscope with a hard carrying case. It is in good condition as
it has had very little use.
The price is $50.00 plus shipping costs from Calgary, Alberta, Canada.
Thank you. Peter Christensen. VE6LP

Hello Al and everyone...
For a less expensive alternative to a full featured 6 meter rig,
consider the Ten-Tech 6 meter transverter, either 6 to 20 or 6 to 2
meter versions, about $100 for the kit and $150 assembled. It's
rated
for 8 watts out but most of the units that have been built around
her
put out 10 to 12 watts, which is plenty of power if there is an
opening.
I built the 1208 6 to 20 transveter and use it for both FM and SSB,
and
it took me 2 days to build it, a good day of which was taken up by
hunting down a mistake I made in assembly.

I have founded a new student amateur radio club at Cy-Fair
High School in Cypress, TX, and WE NEED YOUR HELP!! Before
the summer we will be getting our first batch of newly
licensed hams, but very few of them will have any money to
get a station on the air. If you can help with a monetary
or equipment donation of any kind, please point your browser to:

http://www.argohouston.com/pages/g/gewellss/

ALL DONATIONS ARE TAX-DEDUCTIBLE!!!

I have an excellent condition Kenwood station for sale or Trade,
consisting of the following:

TS-140S HF Tranceiver General coverage receiver. Excellent condition
with boxes manual cables and hand mic.

AT-250 automatic antenna tuner. built in SWR meter and 4 position
antenna switch. Automaticly changes bands with the 140.

PS-430 matching power supply for the 140.

SP-430 matching speaker for the 140.

All gear is in excellent condition and NON SMOKER. The rig has never
been mobile, and I am the original owner.

I am interested in trading the above station for a Kenwood TS-940S/AT
(8mill serial number plus), or will sell the complete station shipped
for $1000.

Thanks and 73's
David

I am selling the following:

note: I bought this equipment less than a year ago, never got my
license and now I need the money to support another expensive hobby of
mine!!! The point is that this equipment was NEVER used, each piece
is still in its box with manuals!!!!

I would like to sell it all as a package deal, I may listen to offers
on individual pieces.

Free shipping in the USA!!!!!!!!!!

- Realistic 2 meter handheld transceiver and case

- RF Concepts 30 watt power amp

- Tucker SWR/PWR meter

- Astron 10A power supply

- Tucker mobile antenna

price = $450

email if interested,
Super-Gut

Information is too skimpy for anyone to make an intelligent guess as to
the value. Your cause would be aided by a few more details. Good Luck !

Greetings,
Both are fine radios.I own a 2350 and an FT8500.My friend has an FT5100 which he likes very well.The only thing is that the 2350 will not do V/V or U/U,that is simultanious VHF or UHF.The Yaesu will do this.I use this feature sometimes,but I would not trade my 2350 for anything.There is a mod for the 2350 that will allow 800 and 900 Mhz receive.
If you can live without the simultanious receive,I would recommend the 2350.It is a fine radio.I am very loyal to Yaesu though.I have owned several of them and they are fine radios.

I am one of those people who think that HAM gears could (or should) be
upgradable, too! My observations to this mentality come from the
nowadays ever-changing technology.

We have seen too many upgradable software.
We have seen too many upgradable firmware.

We have seen almost all computers are of modular design; therefore,
many computers are upgradable (even with parts from different
manufacturers).

Nowadays the "good" HAM gears go modules, too! The FT-990 and FT-736,
for example, are so much more flexible than before that you can plug
add-in parts as your hobby domain expands or for maintenance purpose.
Unfortunately, Yaesu didn't intend to make the FT-990 upgradable.
Maybe because of this reason, the FT-990 is no more. Many of the
Yaesu's, Icom's, and Kenwood's rigs are computer controllable.
Especially, Icom claims all their radios are PC ready! What's good
about it? The control software is upgradable!

Modular (or object) designs are best to me as an Engineer, moreover,
customers would think that they are getting the best investment for
what they pay for. Unfortunately, the VP, marketing and sales

department, the manufacturing facilities, and maybe even the Union bosses probably don't think so.

This leads to my question to Yeasu why they had to make their new FT-8000R's mic-jack 6 prongs rather than the traditional 8 prongs RJ-45 plug. One simply cannot directly use any other mic from other mobile rigs from the same exact manufacturer! Also, find me an 8-pin (RJ-45) to 6-pin adapter, please. Are re-usable parts a thing of the past? Or is it to boost the Amateur spirit -- do it your self?

I have a dream: Someone some day will come up with an open architecture (like in the computer and the software world) which accept 3rd party products. A design that allows us to pick and choose and upgrade when technology allows. A design that allows me to improve my DSP performance. A design that allows me to upgrade the control unit. A design that allows me to upgrade the front-end units. The list goes on .....

It takes some gutsy and innovative R&D team for this HAM market to do such thing. Unfortunately, I am not in this field. Maybe some of you can do it one day.

I know there are fans out there. You don't have to flame me for what I have just said.

Best 73!

As a matter of information to any interested party, Dave Risik was involved in the sale of this unit here in the states previous to the sale to the party in Italy. The individual that purchased here in the states returned it because of the missing manufacturers ID plate. It was then sold to the man in Italy who was not advised of the problem when the sale of the unit was arranged. He became aware of the problem when he attempted to resell it.

Dave is as guilty as last seller of the unit when it comes to not giving full disclosure.

I will be glad to put anyone in contact with the pary here in the states that returned the unit as well as the individual in Italy who has maintained open communications with me since I originally discussed the problem with him. The pary that purchased it here in the states and returned it contacted me after seeing my posting and advised me of his unfortunate experience with the unit.

Message-ID: <5jqt5m$ato@news1.sjc.in.sel.sony.com>
Source record: 176929

I can't keep myself from entering this discussion.

1) I own a 706 and have since Dec 1996.

2) I like it!

3) Some of the new features would be nice to have.

BUT, I don't beleive that the manufacturer has any obligation to upgrade my unit.

The concept of a modular radio like a modular computer is nice but, modular computers are large. Most laptop computers are not upgradable. When you design for size like the 706, you don't design for modular upgrades.

I bought the 706 for its size and am happy with it. It doesn't perform like my TS-940 but I didn`t expect it to.

Just because Icom has added some new features does not cause the original 706 to become obsolete.

I own a 1996 Ford Explorer. The standard features in the 1997 are better. Should I expect Ford to update mine, or provide me with a discount, or even an upgrade path?

Truly modular, multi vendor upgradable products are few and far between and there are always trade offs in the design.

Come to think of it, my IC706 is modular. I can replace the front panel with one from the MarkII and replace the rf unit in the trunk with one from the MarkII.

Tongue in cheek,

Jeff W2UA

> What do they cost?
> How do you stop them drifting?
well... a gunn diode is the oscillator of an assembly called a
gunnplexer (what you will probaly want to use)-- this is a tuned cavity
(fine tuning with a screw) containing a varacter diode (a voltage variable
cap) and a schottky mixer diode as well. the assembly has a wave guide
output which can be bolted to a horn.
SO... you provide 9V to the oscillator so it oscillates. a good, cheap
way to communicate is to have two of these devices, one at each location.
by adjusting the tuning screw, you set them so that they are roughly 30
Mhz appart (thats standard, you can use whatever offset you like)...your
transmitted signal is ALSO your LO, meaning that at the mixer diode, you
will have a 30MHz IF signal. SO, his signal mixes with your transmitted
signal and gets mixed down to the difference of the two. got it? this is
key. the varacter diode is fed with a dc offseted audio; the dc is for
fine tuning and the audio causes the frequency modulation.
the fm is wideband-- makes drifting less of a problem. you could even
use the IF of a broadcast radio here. there will still be drifting, so
you will have to adjust your dc offset to track it...or build an afc.

how much? depends. $50-$300 each, roughly.

good luck.

But to use an equally irrelavant analogy, when I pay for the R&D of Microsoft's latest C++ compiler suite, I expect a significant price break when a new version comes out: part of the money I paid for V1.0 has no doubt gone into the development of V2.0, and my time spent finding and filing reports of bugs, enhancement requests, and so forth to Microsoft is a *very* valuable part of their R&D effort that went into the development of V2.

And let's say Kenmore advertises a washing machine and touts that it will wash your clothes in 15 minutes. You - one of their most loyal supporters - rush to the store and buy one only to find out that instead, it takes their new washer the normal 35 minutes to wash your clothes. Then a year later, they re-introduce the "new and improved" version of the same washer that really will wash your clothes in 15 minutes. Would you be happy?

Yet ICOM did just that, and you (and they) can't seem to grip the problem: the IC706 I bought said "0 to 200 MHz receive" in the original ad, which they later withdrew. Do you have an IC-706? Don't even try it. Unmodified, the radio was completely deaf from 54 to 144 MHz and above 148 MHz. Now the

"Mark II" new and improved version is back to touting "0 to 200 MHz receive", plus a bunch of other things that ICOM learned from their free marketing guinea pigs: the people who paid dearly for first-generation radios.

We deserve to share in the value of the R&D investment we made by buying V1.0 rigs, and we deserve to be rewarded for the unpaid product research we did for ICOM. That's all.

The big thing for me is that the band stacking memories are surely nothing more than a software change (it's conceivable, but unlikely, that the hardware changed to support this addition).

Now, I haven't looked through the schematics for my 706, but they probably used a masked CPU, instead of an external EPROM. I'd be willing to pay $75 for a software upgrade. If they had used an external EPROM, we're talking more about $20 (I'll even pay shipping out to them).

It's a shame, but none of the major radios on the market are designed to be fixed if a software problem is found. Of course, we'ere the same people that bitch that radios cost so much, yet we want all the features. It's a trade off, for sure.

I'm pretty convinced that I can't sell my 706 for anywhere near what I paid for it, ever since the Mk II came out. So for a minor software change, and a redoing of a filter network, the value of my radio has taken a drastic hit.

Well, if you don't mind spending a whopping $1.98 for TWO, please consider those cheap, metal BOOK ENDS in your stationery store.

They'll hold any HT with a belt clip...up to my obnoxiously large Icom U-16 with its CM-8 battery. Just bend 'em backwards about 10-15 degrees for viewing of the display, and you're all set! They come with anti-scratch/anti-skid cork on the bottom, too!

And they even come in brown, woodgrain, or black to match your desk's decor!

You can spend a lot more...but for functionality and simplicity, they can't be beat.

>bosses probably don't think so.

Why should an end user pay for a modular aproach to design, it is more
expensive and much more unreliable .

Single board units have a much higher MTBF than modular units.

The cost of development for multi module design is higher (one reason
is the design process invariably spreads accross a wider team of people
making interface problems).

In fact the only people who are beter off are the service technicians .
(I am one of them , but I would not expect my customer to suffer a
worse product to make my life easier)

I'm sure the shareholder's of the company that employ me would not let
the design engineers double the cost of design / production , to give
the customer an inferior product.

I would ask the question, why dont you buy the plug and fit it yourself.
in the UK you can buy an RJ-45 type connector for next to nothing, and
the disposable crimping tool costs less than the cost of an adaptor.
>
>I have a dream: Someone some day will come up with an open

>The list goes on ....

There is a simple answer to this , build something.

If you buy an Icom 706 low budget mobile with general coverage and 6m
and 200mhz and scanning and 100w and small enough to fit in a car and
etc.......
Don't expect it to out perform a single band profesional tranceiver.

If you want to be able to upgrade as technology changes, then start with
a good design, build it modular and have fun, but don't compare doing
that with buying a *new* front end for your black box.
>
>
>It takes some gutsy and innovative R&D team for this HAM market to do

>such thing. Unfortunately, I am not in this field. Maybe some of you
>can do it one day.

You can do it, YOU can build a beter receiver than the '706. The receive performance of the modern mobile sets is fairly poor, a simple design with good thought will result in a better set.

However what I can't promise is that it will be as reliable, small or easy to use.

>

>I know there are fans out there. You don't have to flame me for what
>I have just said.

I wouldn't flame anyone, my oppinion is that of my own. I own black box radios, I put up with their quirks 'cos I like them. I also build radios when I want to do something better, I put up with their quirks 'cos I am learning all the time.

Have a look at the design of the modern mobile HF tranceiver , Its not built up to a standard , its built down to a size and price. I'm afraid you pay your money and take your chance.

1974. FT-920 NO FM INCLUDED !!!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-25 00:00:00 UTC
From: hershman <hershman@ix.netcom.com>
Message-ID: <33617051.A84@ix.netcom.com>
Source record: 176944

If you look at the FT-920 on the back page of QST magazine you will see that the FM capability is OPTIONAL. I think this is a sneaky play by Yaesu since they know that most Hams who buy this HF-6 mtr radio will spring for the "option". For a radio of its price class I feel it is a way of tricking Hams to buy it since it is a few bucks less than the IC-756 and about the same as the Kenwood TS-570S. My suggestion is to add up all the options you may want and come up with the grand total upfront. Then compare it against other similar models that have all the options standard. I don't mind paying for the optional filters even though the markup is huge. But to pay for "FM" crazy!

There was a posting around the first of the yeaer
with older radios. They were still asking several
hundred dollars each for them.

You might try rec.aviation.???? or one of the aircraft NGs.

Good Hunting!

1nF = .001uF = 1000pF

Thus the original poster, philip de cadenet, is looking for something
with 5000pF and 10,000pF (ie .01uF) capacity.

While these do seem rather large for even 160Meter equipment, there is
no way you will find them in 2M equipment. Considering how large in
capacitance they are, I do believe that they will be hard to come by.
Which is precisely why this isn't a run of the mill question.

From: perryrt@flinthills.com
Message-ID: <5jpch5$aeu@news.flinthills.com>
Source record: 176993

OK, Folks, I need your help.

I'm involved with the local squadron of CAP (Civil Air Patrol). I'd really like to work some electronics into the education program we do with the cadets. Specifically, part of the SAR program uses DF equipment to search for aircraft ELT's (which go off in the event of a crash). I would really like to build a rudimentary DF receiver with the kids. Ideal parameters for this project should be:

1) a kit commercially available, that I can tune (or crystal control) to 2 freqs: 121.5 and 121.6 mHz

2) Battery powered (so we can take 'em into the field)

3) Kits not too complex to test or hideously expensive.

Suggestions? What I hope to do is start with "This is a soldering iron. Grab THIS end" and go from there. Anybody done anything similar?

Would an airband radio work with a decent S-meter and a good antenna?

Thanks alot for all your input!

Yes. It is a fantastic radio. It keeps its specs across a wide range (at least VHF) and has good audio. Sometimes, the front shield can rattle at higher volumes, but otherwise it is a superb radio. I have 2, that is how much I like them. If you have a specific question, let me know. If you buy one, you can get a 3 year warranty for about $30 bucks!!!! That is how confident Motorola is in the product.

Your description fits that of the Avanti "Astroplane" CB antenna of some years ago. It is a very good antenna and can be tuned for ten meters, if that's where you are going to operate. Other than that I can't help you much. Try running your post on the CB newsgroup. Good luck.

Go with an ARCO 466 or 467 and pad it with parallel silver micas. It will take some experimenting. The largest mica compression caps I have ever seen were 2700pf and had a 1/8" tuning shaft. Danny Stevig had them a few years ago.

>
>Is this a Marine or Commercial Transceiver?
>
>How old is it?

The CH-25 and 26 went out of production about 20 years ago.
They are a hybrid radio (tube finals) made in Montreal
The are commercial and marine radios and crystal controlled with 20 cps
stablility with xtal ovens
output is 100 watts
There are coil kits for each freq band
some have internal tuners tacked on the back
there were external tuners available.

I installed a lot of them in your area Carl as I worked for CMC in St Johns
years ago....the local depot will probably still have manuals and parts!

I have a near mint IC 765 for sale. Mid 3000 serial number.

This is still one of the best receivers available today. I love the radio and you will too. Still rates as one of the top receiever of all radios in amateur service according to ARRL Lab tests.

Radio is extremely clean, small mar, not a scratch, on the top right corner in the back. Usual features, 500Hz CW filter, PBT mod.

$1500 firm. Shipping from Minneapolis MN about $50 to the CONUS. I'll pay to package it correctly. Cashier's check or MO, please. Give me an email and we'll talk on the phone.

Certainly the software side of any modern radio that ISN'T upgradeable
means that the radio really isn't modern. Kantronics has done a nice
job in this regard with their KAM - I have a unit with version "8"
firmware - a huge advance of features vs. their original offering.

I'd rather lease a radio and have the ability to pay a fixed fee and
stay current than lose the investment with partitioned feature lockouts.
Who really wants to OWN a radio? I just want to USE it and have fun.

I have a 2350 and am quite pleased with it. It does suffer from some intermod in high-RF areas, but it's not that bad. Receiver is sensitive and so far had no troubles. Also had a 28H and 25A, both ran without troubles.

John N3AB

P.S. As for the intermod, the rig does attenuate if the squelch control is rotated past mid point. That has always cleared it up for me while in the hot spots.

Good Morning Evan -- There are several manual vendors on the web.
Go to URL:
http://pw2.netcom.com/~ac6v/pagef.html#MAN

Am certain I saw National HRO-50 manuals on one or more of these.

2037. FS: Alinco DR-610T dual band

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-26 00:00:00 UTC
From: stewart@wt.net
Message-ID: <33622179.155052696@news.wt.net>
Source record: 176880

I have an almost brand-new Alinco DR-610T for sale. It is in absolute mint condition, with all original box, packing supplies, manuals, etc. I just bought a new car, and I don't want to install a mobile radio. This radio is a steal at $425.00 plus shipping.

I also have a Larson NMO 2/70 dual band antenna with a Larson trunk lip mount for $60.00, or I'll sell both for $475.00.

If you are interested, reply to: stewart@wt.net

In case you're not familiar with the radio, it is the top of the line Alinco dual band and comes jam packed with all sorts of amazingly cool features. For example:

120 channels (30 UHF, 30 VHF, and 3 "sets" of 20 channels each which can be mixed UHF and VHF.

Remote control of most of the functions of the radio (e.g. cross-ban repeater functions) with DTMF tones from a handie-talkie (and from the mic as well, of course).

Full and flexible cross band repeater.

9600 baud packet ready.

"Channel Scope" technology allows you to monitor adjacent channel OR frequency activity (VHF only, UHF only, or both at once!!!).

Detachable remote-mount faceplate.

Can be used UHF/VHF, VHF/UHF, UHF/UHF, or VHF/VHF.

Internal duplexer.

CTCSS encode.

Expanded VHF and UHF receive.

Cross band repeat:

Power: VHF 50/10/5, UHF 35/10/5.

This is a GREAT radio... Let me know if you want it!

Standard HX-240U, UHF 16 chnl/4 watt HT, 450-470 MHz, programmable,
all original accessories and box, software and field programming
instructions, simplex/duplex, hi/low power, scan, CTCSS tones,
drop-in-charger, spkr/mic, power cords, bottom covers, extra alk
battery pack, lighted LED, mobile mag mount ant, manuals, and
digital display. Excellent condition, $300.

Hy-Gain V4R UHF Collinear ant, covers 400-475 MHz, Alpha-Delta
Transi-Trap Static Discharge Unit, extra male "N" Connectors,
cleaned-very good condition, $75.

Realistic DX-380 Portable Communications Receiver.
150 kHz-30 MHz AM and 88-108 MHz FM. Digital display.
Has local/dx and narrow/wide AM reception switches.
Stereo/mono FM switch. Also, hi/low tone and fast/slow
tune switches. AM external antenna, dc power, and headphone
jacks. Tunes by direct entry, up/down button, or rotary dial.
Original box and manual, like new, works great. $100

I will pay shipping via UPS ground.

The official Yaesu part number is E-DC-6. It's a molded plug on the
end of a length of wire; the other end of the wire is stripped and
tinned with no connector. It will certainly fit, since it comes from
Yaesu, and it's not outrageously expensive.

That depends on the frequency. At lower HF, you may not need to terminate the scope line. At upper HF and at VHF/UHF you certainly will. Otherwise the coax will act as a suck out trap and confuse your readings something awful. The unterminated line will show resonance effects at multiples of a quarterwave, and will, of course, exhibit phase shift and other reactive effects at other frequencies if it isn't terminated in its characteristic impedance.

Note too that if you want to use the Tee as a calibrated sampler, you have to supply a known termination to the sampling port. I use a number of modified Tees for this purpose (I use type N however). They have been calibrated as 10 db, 20 db, and 30 db couplers at the frequencies for which they are intended. Since I use them with both my IFR and with a Tek scope, and both pieces of equipment offer a 50 ohm termination, this works out well.

I made a fixture for my milling machine which allowed me to precisely mill back just the right amount of the center pin to give me the desired coupling factor. I then color coded the Tee-barrel sets and keep them in my test kit. This works very well, provided you understand that the calibration is only valid over a limited frequency span. I calibrated mine for the 440 MHz band.

Sadly, it seems that the array of true homebrew (as opposed to kits)
gear is rather poor, albeit somewhat band dependent...

There are a number of HF goodies available as plans, but as you move
higher in frequency, the selection gets worse and the documentation
gets worse as well.

Not sure why this is, but it seems to be the case!

Good luck!

The problem is probably in the second oscillator in VCO1. Probably
conductive potting compound. If not that then leaky diodes in the
receive filter. Definately repairable.

"Lee H." <gtsi@flash.net> wrote:

>What is this used for and why would you need it on a dual band radio?

Lee,

I'll give an example of how I used it today. Our local group was providing communications at checkpoints for the March of Dimes Walk-A-Thon in our area. We were using our normal 2 meter repeater, but the location of my checkpoint did not allow reliable access to the machine using only a handheld. My mobile rig did just fine, but I could not sit in the car and do my duties. Therefore I put the mobile radio into cross-band repeat from a UHF frequency to the repeater input frequency. I tranmitted on this UHF frequency and listened to the repeater output on 2 meters using my dual band HT. This effectively extended the transmit range from my HT to that of my mobile rig.

There are a few cautions I would give about this useful feature. Although it is tempting to just leave it in this mode for some applications, that is putting an uncoordinated repeater on the air and may cause unintentional interference to other hams or repeater systems. Also, the frequencies should be chosen carefully so that you do not wind up on someone else's repeater input or something. In my area, the SouthEast Repeater Association (SERA) recommends certain UHF frequencies for this cross-banding. Make sure the frequency you choose is clear of signals and excess noise. You would hate to have your unit get hung up on some intermod or something and tie up the repeater until it times out. Finally, make sure you are somewhere you can get to the radio to disable this feature if needed, if a problem comes up.

Sorry for all the "free" advice, but this is a feature which must be used with some care. It's a good one, though.

regards, Don (KE4KYO)

Source record: 176895

Hello John.

The 6AQ5 or the mil version 6005 are identical to the 6V6 and are 7 pin miniatures.
The 6L6 is a bit harder.....the 6BQ5/ EL84 are good for 17W in PP; the 6CW5/EL86 can crank 25W as a pair. Those are 9 pin miniatures. It gets damn hard to dissapate any more heat in those small bulb sizes without a fan.

The 6CA7/EL34 will do 45W in PP but they are octal based.

A really cheap and unnoticed tube is the 2E26, a scaled down 6146. A few bucks on the surplus market and they are a 6L6 with a plate cap. Octal based, work great at audio or RF up thru 2M.

Another favorite is the 5881, a premium 6L6GC or thereabouts. Used in military and test equipment and also show up for pennies compared to a "real" 6L6. I even use here as screen regulators in 500V power supplies (triode connected) since I had so many of them.

GL...Carl KM1H 1.8MHz to 10GHz Tubes thru HEMT's....whatever works

April 26, 1997

To anyone interested,

I have a new 16-bit SoundTastic Wave 32 sound card, complete with manuals, software, and promo CD. It is still packaged in its original box.

The card features 32 simultaneous voices, 1MB wavetable ROM, integrated effects processor, MPC-2 compliant analog mixer, 16-bit stereo sound, 2 line inputs, headphone, microphone and joystick jacks, CD-audio connectors and is compatible with Sound Blaster, General MIDI, Adlib and MPU-401.

I am asking $95.00 for the card (obo). I will pay shipping. If you are interested, please reply to this email.

Thanks,
Dan Hicks Jr

HI folks,

I have a dusty Icom 551 that never received the FM kit mod back in it's heyday. I am now wondering if such a beast is still available as an aftermarket product or if anyone recalls an article describing its construction. I have all the docs and could weld one up if I could find schematics for it. thanks for any help. Please E-mail.

Adam, n1gar

2064. Trade: TMC GPR-90

Newsgroup: rec.radio.amateur.equipment

Source record: 176907
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

For Trade:

Technical Material Corporation GPR-90 receiver, circa 1956. This receiver is in excellent cosmetic condition (just a few white scuff marks on the cabinet) and it works very well. It is a general coverage receiver, with amateur bandspread, and was built to the highest standards of quality.

I wish to swap for Drake gear, especially for a TR-7 station, a R7A receiver, R-8 receiver, or any Drake commercial receivers (DSR-1, DSR-2, etc.). I can deliver the GPR-90 to Dayton, or can arrange for shipping.

Thanks!

>anybody had any comments on radio shcaks HTX-202 2 meter ham radio.

HTX-202 is basically a good radio. They do not have the extended coverage receive which would be nice but they are very quiet, receive well and have a few (12-15) memories so that you can at least program the local repeaters. I have been told that they are the only "true" FM radios on the market. Not sure what is meant by this but I believe it is in reference to the fact that they truly are Frequency Modulated units while most other manufacturers have gone to Phase Modulation to achieve the same ends. At the time I purchased mine (Summer 1995) it was also the the most powerful handheld available on a 12 V power supply (well 13.8). The manual states that it will put out 6 watts in this manner but a QST review and my wattmeter both report 7. I think Icom has a unit that goes 7 now and maybe there are a couple of others too. Not a lot of bells and whistles but a good radio that is very user friendly. Unfortunately you don't get a lot of support on these units because the guy behind the counter of most local RS stores usually doesn't know the first thing about amateur radio. I have had good luck with the RS 1-800 Tech Service number. They can put you in touch with people who actually design, build and test the radios and if they don't know the answer to your question they will find the answer and get back to you.
Don't seem to be able to find the number right now but it is in every owners manual.

> > Mike
> >
Hi Mike, I have an Alinco DX-70T and I have used the Icom, the Alinco
has better recieve audio and I have gotten great signal reports on the
Alinco also. I used a 706 at field day and it was a good radio, it has
a built in keyer, and of course two meters, but like the other gentleman
I have a two meter all mode already so the Alinco was the best choice
for me monitarily. The front head on the Alinco is removable, but it
uses a flimsy ribbon type cable to connect the two units, so its
something you would only want to remove or reattach a few times a year,
not something you can pull off and stick in your shirtpocket. The
filters on the Alinco are faily good, I think a little better than the
Icom. I have had the DX-70 for almost a year now and has no problems
with it at all, and I have used it quite a bit as a base and mobile and
special event stations.
The tranmit relay is quite, and the display is not quite as big as the
706 but easily readable. The DX70 also has full and semi keying, and it
comes with CTCSS tones built in, but thier programmed with DIP switchs
on the bottom of the radio, I cant believe in this day and age and with
all the other features this radio has that they had to use DIP switchs!
I dont think you can go wrong with either radio, the DX70 was the radio
for me, and about $400.00 cheaper than the Icom. Hope this helps some.

I had this problem develope about 5 years ago or so (rig vintage 1988),
and it got progressively worse until the radio is now completely unusable.
I ended up buying another transceiver (a Yaesu this time) with the
intention of sending the 440 to Kenwood to have as a backup. But as usual,
I never got around to it and the 440 has been sitting on the shelf
collecting dust. Perhaps it's time to get back in touch with Kenwood
(and my state's Attorney General if need be) and stir up the pot a bit. :)

BTW, it was known to be a common problem then, and the Kenwood tech I
talked to at the time knew about it, so Kenwood can hardly plead innocent.

2076. Yaesu FT 890 AT Auto Tuning HF Rig $800

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-26 00:00:00 UTC
From: don.peaslee@ncn.net
Message-ID: <33616d6e.50342659@news.netins.net>
Source record: 176955

Lowered Price. Yaesu FT-890 AT Compact HF Rig with built in Automatic Tuner. Extremely light use. Approximately 30 total contacts is total usage. In perfect shape, brand new with all the original boxes and packing.

100 watts power on all HF bands. IF shift and IF notch filter. Four microprocessors provide the easiest possible control interface. Two independent VFOs for each band (20 total) hold their own frequencies and modes as well as clarifier offsets and repeater shifts. 32 memories store data for the VFOs giving a total of 84 independent sets of frequency, mode and other selections. Noise blanker, all mode squelch, 4 function multimeter, and AF speech compressor with adjustable IF passband shift. Iambic memory keyer for CW with dot-dash memory.

Top panel heatsink allows this radio to run cool at all times and with an internally switched fan, it allows full transmitter output without any rear panel protrusions.

Add CAT control to hook this fine radio up to your computer.

Perfect shape and like brand new. $800.00, buyer to pay shipping.

2077. FS/TRD: HTX-204's $550 ea. (Wideband Collectible?)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-26 00:00:00 UTC
From: enboe@aol.com
Message-ID: <19970426040801.AAA06771@ladder01.news.aol.com>
Source record: 176956

I have two of the quick-to-disappear HTX-204's for sale or trade.

These are the units that allow for wideband RX and TX. It is the buyer's responsibility NOT to transmit on frequencies they are not licensed to use or to monitor signals forbidden by law. Given that, these would make great radios for police/fire reserve members who are also licensed amateurs. They are also a collectible as they were in stores for less than a month before disappearing, in current guise, for good.

Price $550 each - shipping/insurance included
Trade candidates: IC 706, IC 275H, IC 820H

Message-ID: <01bc51fc$65dcaa20$5ffcacc7@erayner.ibl.bm>
Source record: 176959

Interesting to see that other people have problems with the TS440. I have a TS440s and the digital display drops out from about 7.000 to 14.999 and of course I cannot use the radio when there is no display in that range. I have sent the radio to Kenwood in CA, Barrys in NY, HRO and no one is able to recreate the problem so they say yet it is a definate problem said to lie with the phase loop lock. Any suggestions or is this another piece of landfill from Kenwood. All the shipping back and forth to the USA added to the "repair" costs could have purchased me a new radio.
Thanks for your help
Eugene

I would say that neither analogy is irrelavant, and I take your point
about software upgrades, but I don't think its fair to compare a
proffesional software package with what amounts to a cheap piece of
consumer electronics.

The hardware complexity is similar to that of a quality car radio. (OK
thats a bit hard, maybe a VCR) but because it is compareable in
advertised features to a top of the range TS9abc/123 then we can't help
but draw comparison.

>really will wash your clothes in 15 minutes. Would you be happy?

No I would not, but I would do the following:

Take my complaint to the manufacturer,I managed to spell it this time :)
during the waranty period. If I didnt get satisfaction, and the issue
was important enough to me I would demand a refund. UK law would allow
this , is there similar protection in the US?

What I wouldnt do is wait 'till the mark 11 turned up and then complain.

This is what lots of uk customers of USR sportster modems did, they
didn't get an upgrade. I took my issues up with their complaints
procedure during the first 2 weeks of ownership, and duly got an upgrade
for free 8 months later.

And I didn't have to complain in uk.modem.user.complaints either :)

>
>Yet ICOM did just that, and you (and they) can't seem to grip the problem:
>the IC706 I bought said "0 to 200 MHz receive" in the original ad, which
>they later withdrew. Do you have an IC-706?

Oh I do know it dosen't do all they said it would. I had one for one
week on trial, and rejected it because the RX performance on 148-155
which is an important band to me was poor, also the RX overload on the
specified bands was a little poor even for a mobile.

I would however make the point that a receiver that was designed to work
from 0-200 mhz would have to be a compromise. (unless it cost 10K....)
so perhaps it would be reasonable to assume that as technical buyers we
would expect some areas of its performance to be better than others.

However, if it didn't meet spec, and it was important enough to you to
make a stand, you should have ditched it.

> Don't even try it. Unmodified,

See above

>the radio was completely deaf from 54 to 144 MHz and above 148 MHz. Now the
>"Mark II" new and improved version is back to touting "0 to 200 MHz

I have experience of the unoficial modification to improve the mk1, I
don't think that its too good. In the UK there are lots of big signals
around 155 mhz, its not much fun using a modded 706 on a home antenna.

Have you seen the mark 11 on a test set? Does it actualy do what Icom
say?

>receive", plus a bunch of other things that ICOM learned from their free
>marketing guinea pigs: the people who paid dearly for first-generation
>radios.
>
>We deserve to share in the value of the R&D investment we made by buying
>V1.0 rigs, and we deserve to be rewarded for the unpaid product research we
>did for ICOM. That's all.

In my oppinion you did, the cost of development for the mark 1 would be
very high, I feel that the low cost of the '706 reflects the market
strategy of R&D at the customers expense. If the radio had been 3 times
the price and aimed at a profesional market, I think you would have had
a true grievance.

If you want details of the modifications I can try to get them for you,
but to be honnest I wouldnt bother. I think its only the removal of some
c's in the VHF preselector and the downside is increased overload.

Let me know if you want the info

Hello,
Open the top cover and locate a small green jumper wire.Cut or
de-solder that wire and close the radio.You now have out-of-band
transmit.DON'T TRANSMIT OUT OF BAND!!

I think all these symptoms have been traced to the "goo" in the pll
board. Scrape all of it off the components and the problems will go
away. The goo seems to absorb water during the humid months.

>W4ZCB

Well of course you won't see the full amplitude of the signal you're sampling. That's the whole point. You don't want to terminate an amplifier with a delicate, sensitive, and expensive piece of test equipment. You have to calibrate the coupler for the frequency range over which it will be used in order to determine the amplitude of the mainline signal. That's easy to do with a low power source which won't risk damaging your test equipment.

2091. Re: Cross Band Repeater????

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-27 00:00:00 UTC
From: kc4srn@aol.com
Message-ID: <19970427181300.OAA19792@ladder01.news.aol.com>
Source record: 176770

Another practical application for cross-band repeating is found with a simplex patch. I have a CS-900 for sale in another post. Anyway, set your home radio and antenna connected to THIS simplex patch (needing only MIC and SPK connections) to your select simplex frequency (2m for example). Then tune that 2m simplex freq on one side of your mobile cross banding rig. Then pick an unused 440 simplex frequency on the other side of the mobile dual band rig. Now your 440 capable HT can transmit LOW power (longest portable battery time) and go THROUGH (cross band) the car rig with more power and better antenna TO (and from) your base station and connected auto patch. RESULT you can now take and receive telephone calls on your tiny low power HT from extended distances. The 440 is great for penetrating buildings and 2m is good for longer distance around town. Note: For this example a (full duplex) dual band HT would be better when you can HEAR the base 2m directly from the HT. Therefore you will ONLY cross band WHEN you transmit.

Ham Gear For Sale

DRAKE STATIONS TO BE SOLD OR TRADED BY THE AMERICAN RED CROSS
It is a common practise for people to donate ham equipment to the American Red Cross. It is done many times by well intentioned widows who believe that HF gear is usable in emergencies. Others who know better donate for the tax write-offs they receive. Whatever the reasons the Union City Red Cross Communications Leader Syd Furman has in his possession some very attractive HF stations that were manufactured by the Drake Radio Company. It is desired to trade this for more usable equipment such as 2 meter and 440 mHz transceivers, packet TNC and a working laptop. Also, this equipment is available for sale with the intention of eventually buying the listed gear. At present the Union City office is without any ham gear due to the previous rigs having been stolen. There is one station consisting of the TR-4C sideband tranceiver and its companion the L-4B linear amplifier. At the present time the power supply for the linear is missing and there is some hope we can find it to complete the station. There is a second station consisting of the T-4XB transmitter and its companion R-4B receiver. The power supply that is part of this set powers the transmitter and recieiver. There is a third station consisting of the TX-4XC transmitter and its companion R-4C receiver. The power supply that is part of this set powers the transmitter and receiver. If there is any kind of an interest in all or part of this gear please contact the following: Syd Furman-W6QWK, 396 Teddy Dr. Union City CA 94587, 510-471-1070, w6qwk@wco.com

You would set the car cross band rig to receive with a PL on 2m (that your base is not sending) so that it would not go to the HT while you can receive the base directly from the HT. Alternativly, you could set up a split instead on 2m, but it is recomended that you have PL DECODE on the cross band rig. This saves your car battery. Note that many other precations must be taken when cross banding. You CAN'T cross band two repeaters bacause they will set each other off, back and forth, and back and forth. Always be near your Cross banding rig so you can turn it off if it locks up. Set your transmit time-out timer to about 2-3 miniutes. Use low power going to your HT. Make sure the frequencies you use are NOT being used for a link or anything. Always give you call. The patch gives your call in CW. Be careful out there.

>>buy junk !

>Rich,

>considering Radio Shack just pulled all their HTX-204's off on recall
>(anyone tell me why????)
>Looks like your chopices might be narrowed down

Do not be too quick to blow the HTX-204 out of the water. I think that the radios have a flaw (FCC Legal Flaw) that makes it do something for which Radio Shack might be liable. This might be a blessing for those who bought the first few. To confirm this, check other HTX-204 threads over the past two weeks.

KF4PFE

PS. Radio Shack had similar trouble with one of their scanners a few years back.

>
> Costas

All the yellow wire mod does is force the radio to use the 2m receive filters
all the time on VHF. Thus it will have no adverse effect on 2m operation.
Unfortunately, it doesn't offer a great deal of help outside of 2m in terms
of receive sensitivity. It will let you hear fairly strong Wx transmissions,
but you lose aircraft band reception. There is another version of the yellow
wire mod which gives you this back, but the real solution is to change the
capacitors in the wide receive filter so that the filter works *correctly*.
Then you don't cut any wires and the radio has good receive sensitivity
up to 200 MHz as claimed in the original advertising for this radio.

This mod requires you to remove and discard one capacitor and remove
another and re-install it piggyback on a third capacitor in the filter. These
are surface mount components, but with a little care, and a static hot air
source, it isn't hard to do. You really need the service manual to identify
these parts, so I won't try to tell you how to do it unless you have one at
hand. With this mod in place, receive sensitivity is flat within 3 db from
60 MHz to 200 MHz. The only downside I've noticed is pager intermod
when receiving the FM broadcast band (which this radio doesn't do very
well anyway).

>Can anyone explain the concept of a transmitter hunt? Is it just for fun?
>What equipment would be needed?

Sometimes it is just for fun, sometimes it can be deadly serious. For example, if you are hunting the ELT of a downed aircraft, it's serious. Or if you are hunting a repeater jammer, it is serious (less so, but still serious). Hams also do it for fun, or as a competitive sport. This can be entertaining, and is good training for the times when the skills may have a more serious purpose.

At the most primitive level, hunting can be done with just a HT, using the body fade technique, IE hold the HT against your body and turn in a circle. The point where the signal fades the most is where you are facing directly away from the transmitter. This is very crude, but it is often an effective technique.

Better methods use a beam, a loop antenna, or one of the more sophisticated differential time of arrival or doppler direction finding techniques. These are very useful, especially when hunting from a car, but good equipment can't make up for lack of skill. It still takes practice to be good with any of these techniques.

I have a confirmation on this. Yaesu wants to charge us EXTRA for the FM capability on this radio!! This is outragious. Even the $800 ALINCO gives FM as standard. I feel Yaesu is sneeky. They may fool many Amatuers who would ASSUME that FM is included. Also they know that most hams want to have FM capability especially on 6 meters. Yaesu knows that few hams will spring for the "CRYTAL OVEN". but they can coumt on post sales for the FM board once the anry hams have found out this "feature" is optional. PLEASE TELL YAESU YOU DON'T like this TRICKERY!

2122. Upgrades to Yaesu Transceiver Firmware

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-27 00:00:00 UTC
From: ddanz@primenet.com
Message-ID: <33641ccc.210350187@news.primenet.com>
Source record: 176801

In the computer industry that I work in, it's faily common to have embedded controllers whose firmware can be downloaded and "burned" online. For example, USRobotics and the Sportster modems that were upgradable to V.34.

Does anybody know: Can the same thing be done for the Yaesu FT-8500 and/or FT-51R radios? I.e., can I expect some new version of the firmware to be made available - perhaps to fix a bug or to offer a new feature?

>It happens the same even with the squelch turned up all the way.
>

Well, that makes three of us, then. I just bought a brand new FT-8500
and love it - EXCEPT for four things:

1) the long squelch tail. It's not what another ham who replied to
your post stated; I can make the squelch quiet the receiver, and
search functions correctly, etc. It's just the very annoying LONG
tail and the "mushy" feel when setting the squelch; there's not an
abrupt change between noise and no noise, but a long drawn out change
as the squelch point is acheived. And, no matter how tight the
squelch is set, the between-transmissions squelch tail is horrendously
long.

2) The annoying two-tone beep when using the scan function; it happens
every time the scanning stops. Yes, I know: you can use a function
setting to turn off the beeper - but that also defeats the keyboard
beeper, and with the Mr Potato Head controller, I find it's really
easy for a newbie to hit the wrong buttons - so I really want the
keyboard beep - at least for a while.

3) I was totally flabbergasted to read the fine print in the manual
and find that I needed to purchase an optional circuit card to have
tone-coded squelch. I just didn't expect this when buying the top of
the line, especially when my FT-51R HT has it built in.

4) The sub-band auto-mute function of the FT-51 is MUCH better than
the auto-mute function of the FT-8500. With the '51, activity on the
main band (VHF or UHF) mutes the sub-band. So, if you are listening
(or scanning) both bands, and switch to one to transmit (making it the
main band), the mute function automatically switches to the other.
In effect, you select the one you want to work with. Not so with the
8500. You have to - a priori - select which side you DON'T want, and
you have to do it with function setting that involves the joystick, a
few button pushes, etc. The best thing I've been able to come up
with is to NOT use the auto-mute, and just turn down the volume of the
band I'm not transmitting on.

I sure hope somebody's got a mod for #1 above; surely it's got to have driven somebody nuts before me. And if anybody has any ideas about how to modify #2, please holler at me. But I don't hold out a lot of hope, because I don't think a hardware mod could kill the one kind of beep without also killing the other. But I can hope a little bit, can't I?

> Adam, n1gar
Adam, I started to build one and still have all the parts still.. As I started building it, I came across the real Module and bought that instead... Basicly there FM board is a 9.115 FM Modulator & Demodulator.. Theirs was made out of descrete componints and the one I was going to build was Modulator out of a ARRL handbook and the Rec. IF/Demod. was a NE602 as the IF/Mixer into a 455KC filter into a CA3089 as the demod.... The reason I was going to use the CA3089 was it supplied all of the extra signals. Sq., S-meter, & dev. meter... Since I never completed it I'm not sure about matching all the levels up to what the 551 expected... Also the Xmit & Rec. IF was common so some Diode switching was needed but the ICOM FM board kind of laid that stuff out in their board.. I've since sold the rig to buy a FT-736...

2130. Vandenberg AFB Launch Schedule

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-27 00:00:00 UTC
From: Brian Webb <102670.1206@CompuServe.COM>
Message-ID: <5jvv9j$j4m$6@mhafn.production.compuserve.com>
Source record: 176809

Vandenberg AFB Launch Schedule
As of Thursday APR 24 11:00 PDT

The following table was compiled from UNCLASSIFIED information obtained from
Vandenberg AFB Public Affairs, the Kennedy Space Center, and other sources.
This schedule can be found on the Rawhide Space Page at

http://ourworld.compuserve.com/homepages/rawhide_home_page

Launch
Time/Window Launch
Date (PST/PDT) Vehicle Comments

MAY 03 08:15 Delta II Payload is three Iridium low alti-
tude communications satellites

MAY 07 01:01-07:01 Peacekeeper ICBM test launch

MAY 10 23:51-00:09 LMLV Payload is Lewis satellite

MAY 21 01:01-07:01 Minuteman III ICBM test launch

MAY 27 Unknown MSLS

JUN 15 Unknown Pegasus XL Payload is SeaStar satellite. Mis-
sile will be launched from aircraft
staged from Vandenberg AFB

JUN 18 01:01-07:01 Minuteman III ICBM test launch

JUL Unknown Titan IV Classified payload

JUL 10 Unknown LMLV Payload is Clark satellite

AUG Unknown MSLS Payload is JAWSAT satellite

AUG 01 Unknown Pegasus XL Payload is TERRIERS and MUBLCOM
satellites. Missile will be launched
from aircraft staged from Vandenberg
AFB

OCT 15 Unknown Pegasus XL Payload is ORBCOMM and SNOE satellites.
Missile will be launched from aircraft
staged from Vandenberg AFB

OCT 23 Unknown Delta II Payload is Argos, Orsted, and Sunsat
satellites

DEC 15 Unknown Pegasus XL Payload is TRACE satellite. Missile
will be launched from aircraft staged
from Vandenberg AFB

JAN Unknown Titan II Payload is NOAA-K satellite

Launches are often rescheduled several times. For current launch status, call the Vandenberg Launch Update Line at 805-734-8232 ext. 61857.

If a launch window is given, an attempt will be made to launch at the start of the window. If a problem is encountered, the launch could be delayed and occur at any time in the window, or be rescheduled for another day.

2131. Re: Affordable 2m plans???

Newsgroup: rec.radio.amateur.equipment

Source record: 176810

What do you mean by 'palns' and by 'affordable' ? The range here needs to b
more specific. Also, you mention 'build in the basics' and what do you mean
by that? You can build a 1 channel crystal-controlled 2/10 watt transceiver
for about $60 in parts, from scratch, if you have the test equipment. Or, you
can buy a Ramsey kit, synthesized, 2 watts, for $179, or buy a used IC2AT for
$95, I just did. You see, unless you are trying to teach yourself something, it
makes no sense to buld anything, and doing so ofetn costs more than buying a
radio already built. This is why Heathkit got out of the ham kit business.

Message-ID: <5k08g1$km1$2@mhafn.production.compuserve.com>
Source record: 176811

Funny. Some hams want rigs that can be upgraded when a new feature comes out. But they don't buy the rigs that have this attribute, such as the TenTec Omni 6, which can be upgraded by the user to the new Omni 6+.

I can easily get most of my money out of the 706 I bought last summer, and get the 'new' one. Price delta, about $300, oh, well. It's just a hobby.

2142. UT-101 module for IC-2350H. What can it do for me?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-27 00:00:00 UTC
From: "Chad Johnston, KC8ADE" <webmaster@nuwaysupply.com>
Message-ID: <01bc5179$836d43c0$5d4e99ce@chadj>
Source record: 176827

I currently own an Icom IC-2350H, and have it mounted in my Blazer. I run cross-band through it during the day and the evening. I'm looking to broaden the capability of my cross-band setup by installing the UT-101 DTMF decode module into the 2350H.

I know this will allow remote control of the 2350H from my HT (an Icom IC-Z1A), however, I don't know to what degree I'll be able to control the 2350. If anyone currently uses a setup like this with the 2350, I'd appreciate knowing what you're actually able to do once the UT-101 is installed.

Can I, for instance:

1. Enable and disable cross-band repeat remotely from my handheld?
2. Change both the VHF and UHF via the HT?
3. Change output power settings for the VHF and UHF bands?

Right now, I currently have the 2350 set to cross-band between a simplex UHF frequency and the local repeater's input frequency. This minimizes the TX time of my mobile ('cause I don't have the $88 UT-89 decode module installed in the mobile). I would, however, like to leave the mobile ON, but NOT in cross-band repeat mode, and only enable it when I need to use it (see #1 above). Also, I'd like to be able to choose WHICH local repeater I'm cross-banding with so that I could change that from a remote location, rather than running down to my Blazer to fiddle with the mobile (see #2 above).

Enough babbling. I think everyone gets the drift...

Please email me with any responses, in addition to any posts made here on the newsgroups! Thanks, in advance, for any insight you may be able to lend!

ATTENTION HAM RADIO OPERATORS: During my spring cleaning this past week I found
52 copies of the 1996 edition of the N2RWE Amateur Radio Modification Database which
is a software program that I created in 1994 and have updated yearly as a one-stop
source for Ham Radio and Scanner Modifications! The package contains over
1150 Mods and Service bulletins.

Asking Price: $10 SHIPPED!!

Info:

1996 Hamfest Leftovers!!! Hurry!!! Only 52 Copies Left!!!
Dealer/Volume Discounts Available!
Features:
- Over 1150 Entries!
- OVER 1000 MODS for Ham Radio and Scanner Equipment!!!!
- Over 100 Service Bulletins!
- Fast Retreival with the Easy-To-Use Database Software!!
- Database Software Allows On-Screen Viewing, Printing, and Exporting
- Version 5.01 - 1996 Edition
- 1996 Hamfest Price $15
Mods Available for Over 20 Manufacturers Such As:
- Icom
- Yaesu
- Standard
- Alinco
- Realistic
- Bearcat
- Regency
- Kantronics
- AEA
- Azden
- Many, Many More!
Requires:
- DOS 3.3 or Higher
- 640k RAM
- 4 Megabytes Free Hard Disk Space
- 3.5" Disk Drive

I'd you'd like to get one, or for more information please
visit my web site at http://mypage.ihost.com/unitedsound

2148. Icom 821 vs Yaesu 736

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-27 00:00:00 UTC
From: mwaldron@ohio.net
Message-ID: <5juf8e$od0$1@news3.microserve.net>
Source record: 176833

Hi.

I'm looking at purchasing either a yaesu ft-736 or an icom 821H at Dayton this year, and I'm wondering which is the better radio. I know most satellite operators like teh 736, but I'm skeptical about a design that is over 8 years old. I'm not terribly converned with 1.2GHz or 220MHz, an d I already have 6M, so the optional bands are not really an issue. I'm looking at computer controlled satellite Qso's, 9600 baud pacsats, etc. I'm evenually looking to hook up a yaesu computer controlled az-el rotor, and whichever radio to do automated pacsat uploads/downloads when I'm not home, so support (present/planned) is important.

Receiver performance is a very important item to me, I live in a above average intermod area, I'll probably want to play with Phase 3d, so that's important also.

Please forgive my (lame?) questions, but I've never worked satellites before.

Thanks for your time.

73's de Mike

Source record: 176834

Mike,

I do not have any practical experience, but I recently reviewed the specs for both rigs carefully and it seem to me that the DX-70 comes out on top.

It does not have 2m, of course, so the IC-706 has that in its favour. But since I already have a multi-mode 2m rig, the DX-70 is my choice for 6 meters and possibly also for HF. I should be able to relate some pactical experience in about a week.

73 de VE7MDL ....Erik.

I use my Kenwood TM-642A in crossband repeat mode at least 40% of the time. My interest in local communications with fellow hams who have similar interests (R/C) takes place on 147.42 simplex. I simply program my 642A to receive locally on an indoor antenna and to retransmit on 147.42. This allows me to wander about the house and property with my Standard 228A HT (220 MHz band) and maintain contact with my friends. I do not have to sit at the radio to talk or monitor. Frankly, I don't know how I ever got along without the feature.

Frank, hell will freeze over before I buy another Icom radio. They got me on the 737 and now on the 706. Trade-in or resale value IS important if you have half a brain. I feel betrayed by Icom who has left me holding the bag (an empty one I might add) once again.

Source record: 176842

Hello and thanks for reading this. I have the following items available for sale:

AEA PK232MBX Controller w\ 8\1\91 promset
All manuals and cables to attach to Yaesu FT470
12v Radio Shack walwart supply for controller
GE Century 25 watt radio crystalled for 145.05 and 145.59
Cables to attach GE Century to the PK232

$175.00 or best offer. I can be reached at 330-927-6191 or by email at kelchr@bright.net

2158. YAESU Factory Mods: FT1000/d

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-27 00:00:00 UTC
From: Vince- ex: WV2RSX <WA2RSX@worldnet.att.net>;
Message-ID: <336330E9.115A@worldnet.att.net>
Source record: 176843

Has anyone had their FT1000/d serviced by Yaesu and told that
modifications were made to the radio?

I am interested in becoming aware of what factory authorized mods have
been designed/issued/incorporated in the FT1000/d radios. Not concerned
about transmit freq mod, which is the only one that I have been able to
find anyway.

Tnx es 73s,
Vince

Whether you terminate it or not, you won't see the AMPLITUDE of the signal out of your amplifier. And what you do see, will be a function of the termination and the frequency since the capacitive coupling is frequency sensitive.

FCC Expected to Unveil Plans For Two Airwave Auctions

WASHINGTON -- Federal regulators are expected this week
to set plans for two long-awaited auctions of valuable airwaves,
including one for an emerging wireless technology that could bring new
competition to the local-telephone and cable-television businesses.

Wireless operators, long-distance phone companies, electric
utilities and telecommunications entrepreneurs are eager to bid for
licenses to use huge chunks of the amateur radio spectrum to transmit
voices, pictures and data.

Wireless Auction

Up for grabs: Licenses to use most of the amateur radio
megahertz of electromagnetic spectrum in each of nearly 500 markets
nationwide. Repeater frequencies are much in demand by those with the
following: Uses: Transmitting voices, pictures and data via small, flat
antennas that can rest on a windowsill. Expected bidders: All sorts of
telecommunications companies -- but Baby Bells and cable operators will
be barred from bidding on licenses in their home territories.

"While the auctions for PCS frequencies were very specific
about how the frequencies could be used, rules governing LMDS usage are
more liberal and for a bigger chunk of amateur radio bandwidth," said
Michael Sprayberry, director ofwireless strategy for MCI Communications
Corp.

New Radio Service

The auction rules have been delayed in recent weeks because FCC
commissioners couldn't agree on what amateur radio spectrum would be
available.

The technology operates with small, flat antennas that
communicate with larger antennas mounted on towers. It has tended to
work poorly in heavy rains and fog, but industry officials say they are
working to fix the problem. Operators also could run into resistance
from cities that increasingly are blocking the construction of new
antenna towers. However ham towers could be seized as the FCC has
decided that the amateur radio service no longer serves the public
necessity.

My TS440S (1989 vintage) was reported to have "RF in the shack" noise
and "FMing" The reports were valid - I'm on a regular club net and these
folks were being honest. I did all the normal things; groung
improvements, bypass caps, isolation, da da da da; with no improvement.
My 440 has been shelved for several years - I'm now using a Ten-Tec
Argosy.

I have heard of poor solder connections on the 440 boards. I am not
looking forward to the tedious removal and search of each board unless
there is a probability of success. Anyone heard or gone through this
routine?

Message-ID: <01bc531d$fe8c5d20$506157c6@520d>
Source record: 176854

I have recently aquired an FT-5100 with this and an FT-50 dualband.
the best explanation is a demonstration.
I set the FT-50 HT to recieve a local repeater but TX on a 440 freq.
I set my FT-5100 mobile with 1 band on the 2M repeater freq
and then the 440 freq. on the other band. set cross band.

Now when I am in my apartment where I normally can not
reach the repeater with my 5W HT , I Use the HT to TX on 440
Where the crossband mobile picks it up and reTX it on the repeater
2M freq. I am using the mobile the same as most HT users use a
repeater. Just different sets of bands. This lets my HT
reach out at 50W instead of 5W get it?--

I have the original 706 and know how to open up the VHF
receive outside the 2m band (by doing the famous yellow wire mod).
I consider doing this for listening to weather reports.

If I do that, would I will be subject to pager (154MHz) intermod on
2 meters? Anybody has real-life experience on this?

Costas

Bob,

This should fix you right up...

73
Mark
N4EOC
Germantown, MD

Cross Band Repeating

Cross band repeat isn't documented but comes ready from the factory.
To enable cross band repeat from the front panel, first select a band
by pressing BAND SELECT. Then, change the control to the other band by
hitting [CONT SEL]. Next, press [F] for one second, then the "X" button
(far right side). Decimals will appear between the Kilohertz digits,
and
the "ON" indicator will light momentarily. The microphone sequence to
enable cross band repeat while in remote control mode is "DC".

The transmitter hang time can be toggled between 500ms to 0ms by
turning on the radio with [LOW] pressed. They also recommend enabling
the Time-out Timer, for obvious reasons.

Note that the TM-733 can also be used as a "one-way" cross-band
repeater.
For example, if you can receive a distant repeater with your HT, but
have
difficulty getting into it, you can use the TM-733 to boost your
transmitted
signal. To set this up, just omit the part where you "change the
control
to the other band by pressing [CONT SEL]." Doing this will setup the
TM-733
to repeat your signal to the other band, but will not retransmit the

distant
station back to you. If this sounds ambiguous, play around with it a
little
and it will begin to make sense.

2190. Icom IC-551 option boards

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-28 00:00:00 UTC
From: jgarver@ichips.intel.com
Message-ID: <5k3cjk$e2i$1@news.jf.intel.com>
Source record: 176675

Icom IC-551 6 meter "allmode" notes:

Yesterday the neighbor's electric fence was driving me nuts.
My lookalike IC-251A has a great noise blanker but the 551 noise blanker did not seem to be working. After probing around inside I discovered that a small external voltage regulator board was missing from the circuit. All the critical stuff was already on the main board however. I looked at the documentation again and found that the noise blanker was an option! But they put all the circuits in, just left off the power! Icom's marketing dept. went nuts on the 551.

I installed a wire from the collector of Q13 to the Anode of D21 and the noise blanker works fine now, without that little VR board and its parts.

Well, I have the VOX, PBT, and now the NB, but the FM is going to take more than adding a wire. I don't really need it anyway, I guess.

Say, do you know where I can get the 430 Mhz version, the IC-451? Then I would have all three. I was so impressed with the design and performance of the IC-251A that I aquired the 551 but it looks like someone else designed that one. Same looks outside, entirely different inside plus a little help from marketing to make standard features now obsolete options.

> http://users.southeast.net/~jpf

I'm about to buy 3 of them. I have 2 sons that will get their license soon or at least I HOPE that they'll pass. :-) Anyway, so far, the only postings I've seen were from those who like the unit. To see these postings, use Dejanews:

http://www.dejanews.com/

You might be interested in knowing that Alinco has reduced the price of the unit. Ham Radio Outlet shows the price as $119.95, it used to be $139.95. Please see:

http://www.hamradio.com/cgi-bin/uncgi/ase?MAN=Alinco&ITEM=Dj-S41T&DESC=&TYPE=&MAX=10

OTHER NEWS:

I see that Alinco has introduced a 2M HT version of the DJ-S41T; called the DJ-S11T. Please see this WEB page for more info:

http://alinco.com/Products/DJ-S11T.shtml

By the way the list price of this unit is $149. My guess is that it will sell for about $139 in some stores.

Anyway, if anyone has the DJ-S11T and could comment on it, please do so.

Thanks,

Bob Diaz

>
> HTX-202 is basically a good radio. . . .

The Radio Shack HTX-202 may not be as small or as "sexey" as some of the other HTs, but it's a good solid unit. I've had mine for almost 2 months and I'm very happy with it.

A friend of mine has a more expensive (and complex) unit, he has a hard time trying to set it up for a new frequency. However, I find the HTX-202 easy to set up.

I also purchased the Mirage B-34 2 meter amplifer for use in my car. The B-34 takes the output of the HTX-202 and puts out a 35 watt signal. Add a magnetic mount antenna and it's a nice system.

> interested in stability and accuracy.

Alan-

I loved the Radio Shack counter, until I checked its accuracy!

First, the manual requires that you use the plug-in power adapter to to
get accurate readings. In other words, it is voltage dependent.

Second, it may be fairly accurate at the temperature at which it was
calibrated, but it is terrible at other temperatures.

Mine is currently calibrated at about 75 degrees F, plugged in. At 80
degrees using batteries, it seems to be off over 1 KHz on Two Meters, and
over 3 KHz at 440 MHz. This is not good for an instrument that reads out
to the nearest 0.1 KHz.

I suggest you take a look at comparable Startek and Optoelectronics
counters. They may cost a little more, but are probably a little more
accurate.

"Lee H." <gtsi@flash.net> wrote:

>What is this used for and why would you need it on a dual band radio?

>Thanks
>lee H.

Here is what I use mine for:

I cannot reach a friend's UHF repeater from my house with a handheld, but my base rig (a Kenwood TM-721A mobile with crossband mod and CTCSS decoder module) with an external antenna has no problem.

So, I set the UHF side up on the repeater in question, then set the VHF side for a quiet simplex frequency, protect it with the CTCSS decoder, and put the VHF output into a dummy load instead of an antenna.

Now, I can freely roam around my house and immediate area with a 2-meter handheld transmitting simplex (with the proper tone) on the selected 2-meter frequency, and the radio translates everything to/from the UHF repeater.

The only thing you have to keep in mind is that the crossband link must drop entirely before the next transmission can occur (the crossband repeat is not full-duplex like a standard repeater, but is half-duplex).

You must identify often in BOTH directions to remain within the rules.

I also disconnect the microphone, as it is hot during the crossband repeat and will pick up any noise in the room.

Zack ,
forgot to add... the prgm Rig-EQF allows full control of the 850 from
the keyboard. One of the best features is the ability to upload/download
from the memory channels of the 850 to the computer and back.
I keep alot of my splits loaded (for mode k RS-12 sat) on the compter
and just with a key press it sets up the rig for same...very nice!

Check out Log-EQF's logging prgm... with it is a companion prgm called
RIG-EQF (both written by N3EQF, Tom Dandrea) I've been using it on my
850 for a few years now ... works great.

There's a website for Log-eqf and Rig... the sw version is 90% complete
(except a few utils) try it.

A carpenter that did some work for me has a 2 meter/440 and uses it to stay in contact with his brother. I asked about a call sign but he said he did not have one.

What type of penalty?
Who to contact?

Please post.

Thanks in advance.

Attention Northern California Repeater Owners: Have you had any problems with unreasonable, arbitrary behavior or croneyism and favoritism on the part of NARCC, the Northern California repeater frequency coordinating body? If so I'd like to hear about them. Please send me a brief description of your experiences in working with this group, including names, dates, places and events to the extent you remember them. Thanks in advance- Tom WA6HAS <sharples@hooked.net>

If you are not interested in the VHF...and I am not so sure 6-meters is worth the effort....but, you are looking for a small HF...why not check out Kenwoods TS-50 or the new Yaseu 900CAT...I think you'll find both of them better than the ICOM or Alinco.

Trying to interface this device to Linux. I could never get Kermit to cooperate with the PK-12 (/dev/cua1). I used to have syeon working fine with it, but it now it no longer works. PC's seem to have no problem communicating. Anyone else had trouble successes talking to the PK-12 in a dumb terminal mode from Linux?

Don't believe you. Your troll was obviously the product of a lonely
mind damaged by years of abuse. It was a little less obnoxious than
your Sarex BS though. A serious question do you hate yourself as much
as you hate other hams.

Jerry

2223. DTMF Messaging

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-28 00:00:00 UTC
From: Rob Bailey <wm8s@pobox.com>
Message-ID: <01bc537e$cd8ebe00$587e65ce@wm8s-1>
Source record: 176723

Does anyone know of a link to the format for DTMF messaging used by Kenwood, et al? I can't find my KW manual, and I need to encode a DTMF message. This is the format used to send alpha messages. It goes something like "paging code" + char + char + char + etc. where 'char' is a two-digit code for each alpha digit. I recall it was roughly based on the keypad layout, so that 11 (1st char on 1st key) was A, 21 was B, 31 was C, 12 was D, etc.

Thanks!

73 de Rob wm8s@pobox.com

I have a pair of brand new 32 MB simms, 60 ns, non-parity
made by Kingston memory.

They are model # KTH3200/486 and will work with almost all
PCs. I will sell both for $300-----

Email me if you are interested:

2225. Jeep Wrangers and Antennas ?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-28 00:00:00 UTC
From: sarastro@swbell.net
Message-ID: <33641a0c.33713328@news.swbell.net>
Source record: 176725

Greetings. DE N5RXZ

I am looking at getting a jeep wranger buta thought or two has
crossed my mind. I run for a rural EMS service and I am also
some what active in 2m/440 area and was wondering
if there are any jeep wrangler owners out there who could
advise on where you mounted your antennas and what kind
you used? Obviously the magmount and glass mount
for me isnt an option, at least I dont see where I would
put them with a canvas top and all ..
I would appreciate any advice...

Thanks

T Garland

Thanks for your responses. Size and rx quality are my main interests. FT 900CAT is too big and the TS 50s specs and comments from other hams tell me I shouldn't consider the Kndwd. I'll decide B4 Dayton. Tnx again and 73s.
